Subject: FW: question about hardness/ any luck with public health source?

Have you ladies got anyone in your shop who can address the relative health risk of short term exposure to HTTM? It's a Flint thing.

Thanks.

Subject: question about hardness/ any luck with public health source?

Hi Brad:

Hardness of water has been a concern here but I know it's considered a secondary contaminant and not federally regulated.

Hardness levels can be enforced at the state level, but I don't know if Michigan does.

Can you help me with information on that?

Also, did you have any luck identifying someone with a public health background in state government who can talk about TTHM with me. I have to wrap up that story today.

Thanks,

Ron Fonger
