Subject: Flint lead info
Attachments: EPA List of Large Water System Lead Levels.pdf; Flint Journal.pdf; Flint lead history.pdf

Some historic reading, as well as Flint's lead history.

When they were part of Detroit, we only collected 30 or so samples, so the statistic representation is smaller. But what's interesting is to note that the number ranges all over the board, from 15 ppb to 0, depending on the year. That's why we want everyone to know that the only way to eliminate lead is to remove pipes, but homeowners can also install a filter on drinking water taps or just run their water for a bit to reduce exposure.
