I think this would be great for the website, but it'd be better if we could post it directly as a PDF. We could link, but EPA updates their site regularly, so links to their pages tend to break pretty quickly. We'd just have to have an agreement with them on when the PDF would come down so they wouldn't feel like there was an outdated version of their pamphlet floating around.

George,
 I have a copy

Please see the link below. This is a rather comprehensive (albeit not completely up to date in places) description of water issues that is written in relatively easy to understand language.

Is this something that we should post a link to on our water site? Or perhaps ask EPA if we can post it directly? This is clearly an EPA publication so if we get permission to post it there is no chance of plagiarism.

Howard:

Thanks for arranging the meeting today. I didn't catch all of what Natasha (and others) said on the line but I was intrigued when I heard her mention a fact sheet or some information on Lead that was taken from a city in MA. Can you/she forward that URL for our review and consideration?

During the last call, I also noted my concern regarding boil advisories during a lead emergency and wanted to provide a link that documented what I said about Lead (and nitrates for that matter) being concentrated upon heating.

http://water.epa.gov/drink/guide/upload/book_waterontap_full.pdf

Lastly, I couldn't hear who made the comment, but I agree that infants are likely the most vulnerable of concern. So, I was wondering if the clinicians/health practitioners in the room might consider partnering or spearheading an outreach effort to target expectant mothers with the Filters that are being provided. Not sure if this is best done via prenatal clinics, delivery hospitals, OB-GYN departments, or lactation management specialists, etc. The public health practitioners might also be able to use this emergency as another reason to advocate breastfeeding (vs infant formula).

Thanks,

Mike
