Hi Stephanie,

Just to be clear, the Flint River will not be separately assessed for this PCB TMDL. It is a statewide TMDL, so data was used from across the state by reviewing fish tissue concentrations and then determining a reduction percentage. We did get a list of facilities statewide with PCB source discharges from DEQ permits and have them listed in the draft we are working on.

The draft should be available for public review within the next couple months. I can add you to my list of individuals to contact when the draft is on Public Notice if you would like, let me know.

If you still would like to meet after knowing the above, does 10am work for you? I am on 2nd Floor South by pillar N5.

I can come down, just let me know what time works for you. I have some general questions just about how the river will be assessed for PCBs and wondering if areas of known sources of discharges are included in that assessment...

Sure, we can meet today, but maybe you can give me a couple pointers as to what your questions may be before we meet. I have a conference call from 1-3pm today, but am free to meet the rest of the day. I have to step away from my desk for a couple minutes here, but let me know a good time to chat on the phone or meet up. Thanks.

Yes, that is correct Kevin, it is a part of the state-wide MI PCB TMDL.

I believe that is included in the state-wide PCB TMDL currently being developed by a contract and managed by Sylvia Heaton/Marcy Knoll.

Hi Kevin,

Do you know who will be working on the PCB TMDL for the Flint River. It's scheduled to be done in 2013.
