Importance: High

Hi Michael,
Thanks again for the information in your May 7th email. I've spent several hours yesterday and today trying to digest all the information you sent in addition the 34 pages Larry sent in the attached scan. In a separate email, Larry forwarded the correspondence between you and Piper back in January and February of 2014. (PDF file named Jan - Feb 2014 DEQ & Piper emails) I note that you were always timely in your responses to Larry, including a June,
2012 letter that followed his April 2012 letter to you. We, the Board, thought the matter was over with the April 2012 letter because of our understanding that only one home was involved.

That Board members are seeing the series of letters and emails for the first time has me upset to say the least.

So much for that. Below are several questions:
- Can you forward the communications from DEQ to Piper for the years 2011 to December of 2013 in which you provide information on the specific homes that exceeded the Action Level? Larry says that everything he has is in the files. I'm concerned that we have gaps, particularly with DEQ notices of high lead levels and what the response was from Piper.

- For reference, I've attached your one page summary, "CDL Pb AL summary."
It shows that 59 Chateaux Du Lac had a high lead level in 2012. I find no record of a 59 Chateaux in any of my records. Can you clarify?

- I know that we receive results of our water sample. My home (54) has always been below the limit; hence I never asked any further questions. I am not aware of any homeowners where the limit exceeded 15 ppb raising an issue with the Board or Piper. From a DEQ perspective, what is supposed to be done with those individual homeowners?
- Do you have anything that explains calculation of the Lead 90th Percentile Result for a layman?

- The below from one of the EPA hotlinks states no health effects but I could not find which study among dozens at the Elsevier website that support that claim

The Food and Drug Administration (FDA) has issued a report on the toxicology of inorganic phosphates as food ingredients. The FDA considers phosphates as a food additive to be "generally recognized as safe." This report is available at: www.elsevier.com/locate/foodchemtox.
Also, NSF International maintains recommended maximum dosages of drinking water additives including phosphate products. The typical phosphate levels found in a liter of drinking water are about one hundred times lower than the phosphate levels found in the average American diet. For example, a person would have to drink 10 to 15 liters of water to equal the amount of phosphates in just one can of soda.

When I typed "phosphates food additive" in the Elsevier search function, I found what is shown in the attached Word file named Elsevier Phosphate Search. I would appreciate any guidance on finding the specific study referenced in the EPA report.

- I note that the homes in question were all built in the 80s. Not sure what this means - maybe the kind of solder used in plumbing?

Thanks for your continued assistance. I know this takes time and effort.
We are trying to get our arms around this to do the right thing. The Board meets tomorrow night and this will be a key topic of discussion.
Thanks again,
Mike Taubitz

Mike:

The Jan 2010 report indicates "satisfactory and the Nov. 2012 report show a continuous high level at only one unit.

Thanks

Larry

CHATEAU DU LAC
2009 WATER SYSTEM REVIEW

WSSN 1353 Supply Chateau-Du-Lac Condos County Genesee

Date 12/16/09 Reviewed by MFP District 11

Primary Contact:	Larry Carter	Copy To:	Mike Duncan
Title:		Title:	Caretaker
Telephone:	(810) 767-683	Telephone:	(810) 397-2043
Address:	Piper Realty 5454 Gateway Ctr Flint, MI.	Address:	7279 Ray Road Swartz Creek, MI. 48473

Population: 100 Year: 2009 Basis: MDEQ Est.

Distribution Classification: S-4 Cert. ID #

Operator in charge: Robert Stucker S-2

Treatment Capacity: N.A.

Treatment Classification: N.A.

Comments:

This supply consists of two wells piped into a wellhouse located in the clubhouse basement. The wellhouse is equipped with stand-by chlorination and hydropneumatic storage. Water is then distributed into a small distribution system consisting of 4 and/or 6-inch watermains and several flush hydrants. Mike Duncan continues to be the maintenance person at Chateau Du Lac.

This supply is nearly 100% developed and consists of approximately 38 occupied living units. There is one vacant lot available.

The Association president is:

Mr. Tom Murphy

The Operator in Charge is:

Robert Stucker

Well #1 was producing water with high levels of methane gas in 2005-2006. There has been no further problems or complaints associated with the methane gas since 2006. Well #2 is due routine pump and motor maintenance.

WELL INFORMATION

WELL AUXILIARY POWER: Installed in 1999. Both wells are equipped to operate under emergency power. The generator starts automatically every other week.

Comments:

The wellhouse is located in the clubhouse basement (mechanical room) and the space is shared with the swimming pool piping system, filtration, and heating system (no cross connections were noted). Storage of pool materials remains a problem.

A stand-by chlorinator, feed barrel, and electrical outlet are also provided for an emergency or potential contamination. The chlorine feed system is not in use and no chlorine was being stored. The OIC works at the Fenton WTP and can provide chlorine on an emergency basis.

The metal flanges and fittings have been wrapped with insulation and tape and appear to have inhibited any further corrosion in the wellhouse room; however, dehumidification should be provided.

Vulnerability Assessment

Chateau Du Lac's wells are determined to be "moderately" vulnerable to volatile organics (fuel petroleum compounds), pesticides, and herbicides. Further discussion of this and the associated chemical monitoring guidelines were provided in previous correspondence.

PRODUCTION AND STORAGE REQUIREMENTS

Production History

Water usage data is not available from this supply since the water meter is not functioning. An estimate of 55 GAL/DAY/CAP has been be used for consumption.

Units are in GAL/DAY

YEAR	Max Day	Avg Day	Min Day-Date	Max/Avg	G/C/D	% UnAcct H20
1995-2009	10,000	6,500				±

Five year Max Day app 10,000 G/D Date
Ten year Max Day Date
Five year Avg Day app. 6,500 G/D

Max Day for capacity requirements 10,000 G/D

Comments:

Well Capacity

Total Well Capacity 200 gpm 0.288 mgd

Firm Well Capacity 100 gpm 0.144 mgd

Firm Well Capacity/Max Day >>100 %

Total Auxiliary Power: 200 gpm

+Basis of Auxiliary Power Waiver NA

Comments:
The existing well capacity is adequate for the number of living units obtaining water service.

PRODUCTION AND STORAGE REQUIREMENTS

Storage Capacity
Three hydropneumatic storage tanks (Well X-Trolls WX-456s) are located in the wellhouse. All three tanks have been insulated

Total Gross Volume: 1266 Gallons

Total Usable Storage	app. 380 gal.	_____ mil. gal.
Total Usable Storage/Max Day	<< 100 %	
Total Usable Storage/Avg Day	<< 100 %	

Comments:

The storage facility is not designed to provide fire protection or to supply a day's demand from storage. The size of the storage tanks provides an adequate pump run time and minimizes excessive cycling.

Previous inspections of the wellhouse revealed that the hydropneumatic tank fittings showed corrosion. Insulation installed several years ago appears to have mitigated further corrosion, however, dehumidification should be provided to prevent condensation of moisture and additional corrosion during the summer months.

DISTRIBUTION

Interconnections With Other Supplies

Is water purchased from other supplies? No

Distribution Piping

Identify distribution piping materials - INFO. NOT AVAILABLE, AN UPDATED GENERAL PLAN IS NEEDED

PVC	? %
D.I.	? %
A.C.	? %

Estimated per cent of piping with coal tar linings: ? %

Identify distribution pipe sizes - INFO. NOT AVAILABLE, AN UPDATED GENERAL PLAN IS NEEDED

2-in	? %
4-in	? %
6-in	? %
8-in	? %

Are there areas where water main breaks are frequent? No

Are there areas where customers complain of low pressure? No

Are there areas where aesthetic water quality complaints are frequent? No

Are there areas where fire flows cannot be maintained? Yes

locations: The entire system. This supply is not designed to provide fire protection.

Last ISO report date? N.A. Rating? N.A.

Which, if any, of the above listed areas has the supply prioritized for main replacement, upgrading or looping? Also, if a definite schedule for capital improvement has been established, list the proposed completion date.

There are no capital improvements programs in effect or proposed.

General Distribution Comments:

This supply consists of a small network of 4 and 6-inch distribution mains with several flush hydrants and valves. However, since a general plan of the system is not available, specific details are not available.

Distribution Appurtenances

Hydrants

Number of hydrants	8
Number without auxiliary shut-off valves	None
Number that are self-draining	None
Number of inoperable hydrants	None

Frequency of hydrant inspection: Flushed in spring and fall

Inspection staff: Caretaker - Mike Duncan

Comments:
Hydrants are flushed once sometimes twice a year.

Are there areas where additional hydrants are needed? No

Hydrant location system? Map Accurate? Ok

Are hydrants color coded for capacity? No, hydrants can't provide adequate

flows

Has this information been provided to the fire department? Yes

Frequency and seasons of hydrant flushing? 1-2x/yr Spring/Fall

Purpose of flushing? Clean mains

Is the public notified prior to flushing? No

Does flushing follow a specific format? Yes, from the source outwards

Is the volume water used during flushing estimated? No

Is a record maintained of hydrant activities? No

Comments:

Maintenance and construction records of each hydrant should be established and maintained.

Residents should be notified of upcoming system flushing to minimize complaints, etc.

Valves

Number of valves several
Number of inoperable valves 0

Are there areas where additional valves are needed? No

Valve location system? General Plan Accurate? No

Valve Turning Frequencies:

Distribution system valves are not exercised.

Records maintained? No

Customer and Service Information

Number of service connections 38
Number of metered service connections None

Identify service line materials and estimate percentages:

Copper	most
PVC	few
Cal	none

Pumpage Distribution

% Residential	100 %
% Commercial	None
% Industrial	None
% Other	No other large users
% Large Users - List	

PROGRAMS AND PLANS

Cross Connection Program

The lawn irrigation system obtains its source water from Silver Lake and is not inter-connected to the water system. The OIC and/or caretaker should inspect outside hose-bibs on all residencies for adequate backflow prevention. The janitorial room behind the clubhouse has a filling sink. An atmospheric vacuum needs to be installed on the faucet above the sink. Cross connection activities including correction of the cross connection in the clubhouse and other inspection activities need to be reported on the cross connection annual report form. A copy of the report form was provided to the OIC during the review.

Annual Pumpage Reports

Is Annual Pumpage Report Required? No

Was previous year's annual report received? N.A. Date

Monthly Operation Reports

Are Monthly Operation Reports required? No

Were all previous year MOR's received? N.A. Timely?

Are previous year's MOR's Acceptable? N.A.

Comments:

Emergency Response Plan - None

An emergency response plan needs to be prepared. A format was provided to the OIC.

General Plan

Date of most recent plan 1990s Acceptable? No

Filed where? Clubhouse

Comments:

The existing general plan of the water system is outdated. The general Plan needs to be updated.

Reliability Study Not required

Bacteriological Monitoring

Date of approved sampling site plan: 2007

Are samples still being collected in accordance with the plan? Yes

Number of samples required each month: 1
Basis for setting number of monthly samples: pop.
Certified lab used: In-House Water

MCL, Monitoring, or Reporting Violations in Past 60 months? None

Chemical Monitoring

Date of Monitoring Schedule: Feb 09

Are samples collected in accordance with the schedule? Yes

Were nitrate, nitrite and fluoride (or p chem) samples collected: yes

If nitrate detect, what is concentration? ND
Sample site POE (2009)
If nitrite detect, what is concentration? ND
Sample site POE (2009)

Detects for metals >50% of MCL? Yes
Metals (list) Arsenic @ approx 5 ppb

Detects for VOCs? No
Detects for SOCs? No

Date of approved DBPR monitoring plan? NA
DBP sampling done? NA
If yes, done to sampling site plan? NA

Lead/Copper Monitoring Program

Number of required Samples 5
Semi Annual/Annual/ Triennial Annual
Exceedance of lead or copper action level? Yes
If yes, was public education issued? Yes
Next Monitoring Period 6/10 - 9/10

The lead action level was exceeded in 2008. Two six-month rounds of samples were collected after the exceedence and neither action level were exceeded in both monitoring rounds. All water quality parameter monitoring and public education requirements were met during the exceedence. No further corrosion control measures will need to be taken at this time. The OIC was advised to verify that participating residents are collecting samples properly and in the proper locations.

Radiological Monitoring Program

Date of monitoring schedule: Feb 09

Are samples being collected in accordance with the schedule? Yes

Alpha, beta, radium, uranium	Yes	Date collected: 4/22/02
Radium 226 & 228	Yes	Date collected: 4/22/02
Tritium	No	Date collected:

Detects for Rads >50% of MCL?

Gross Alpha: <3.0 pCi/L
Ra 226: <1.0 pCi/L
Ra 228: <1.0 pCi/L

Consumer Confidence Report

Was the previous year's report received? YES Timely? Yes

Was the previous year's report acceptable? YES

Was the previous year's Cert. Form received? YES Timely? Yes

2009 Monitoring Schedule

CHATEAUX DU LAC CONDOMINIUMS — WSSN[1]: 01353

Collect samples early in the monitoring period. Bacteriological and partial chemistry samples should be collected close to the shipping time and sent overnight delivery so sample holding times are not exceeded. The DEQ laboratory is closed on state holidays.

This table reflects your expected routine monitoring and is subject to change.

Location: Well 1 or 2 - Point Of Entry

Collect these samples at the entry point to the distribution system (after treatment, if applicable.)

Sample Type	# of Samples/ Frequency	Collect Before	Site Code[1]	Test Code[2]	Unit Number[2]	Cost[2]
Partial Chemistry	The DEQ lab's "Partial Chemistry" scan includes nitrate, nitrite, fluoride, and sodium whose monitoring frequency requirements differ from one another. Before requesting analyses from a laboratory other than the DEQ laboratory, check with your DEQ district staff for the specific monitoring requirements.					
	1/12 months	**09/30/2009**	CH001	R	32	$18.00
Volatile Organic Compounds	1/36 months	09/30/2010	CH001	CXVO	36VO	$100.00
Metals	1/108 months	09/30/2010	CH001	CMET2	36ME	$102.00
Arsenic	1/36 months	09/30/2011	CH001	CAS	36ME	$18.00
Cyanide	1/108 months	09/30/2014	CH001	CCN	36CN	$25.00
SOC – Pesticides	1/36 months	09/30/2011	CH001	CXPT	36NV	$125.00
SOC – Herbicides	1/36 months	09/30/2011	CH001	CXHB	36NV	$120.00
SOC – Carbamates	1/36 months	09/30/2011	CH001	CXLP	36LP	$120.00
Gross Alpha (Radiological)	1/108 months	09/30/2015	CH001	Not performed at the DEQ Laboratory. If due this year, a list of certified laboratories is attached.		
Radium 226 & Radium 228	1/108 months	09/30/2015	CH001			

Location: Distribution System

Sample Type	# of Samples/ Frequency	Collect Before	Site Code[1]	Test Code[2]	Sample Unit[2]	Cost[2]
Bacteriological	**1/Monthly**	**Monthly**	DIST	BPTC	30	$16.00
Lead/Copper	5/6 months	Bi-	DIST	CCUB	36CC	$26.00
Water Quality Parameters	Required if Lead/Copper 90th percentile exceeds the Action Level		DIST	Various	Various	Various

[1] To receive credit for monitoring, you must include the **"WSSN"** (Water Supply Serial Number) and the **"Site Code"** when you submit samples for analysis.

[2] Test codes, sample units, and costs are listed to help you complete the laboratory form if you use the Department of Environmental Quality (DEQ) laboratory. The DEQ laboratory costs are subject to change without notice. If you use a certified laboratory other than the DEQ laboratory, please contact your DEQ district staff for a list of all required contaminants and forward a copy of all sample results to your DEQ district office.

Mr. Larry Carter
C/o Chateau Du Lac Condominium
Piper Reality
5454 Gateway Center
Flint, Michigan 48507

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Chateau Du Lac Condominium
2009 Water System Review

This letter confirms my visit on December 15, 2009 with you and Robert Stucker, your operator-in-charge (OIC). The purpose of the visit was to update the Chateau Du Lac 2006 water system evaluation. An updated water system review form has been attached which details water system components.

The findings of the updated evaluation show that Chateau Du Lac's water system continues to maintain a **"Satisfactory"** rating. Specific water system concerns that need attention were noted and these concerns are discussed in more detail below.

1. Our most recent copy of Chateau Du Lac's water system general plan was prepared in 1984, and the plan is clearly outdated. It appears, based upon our discussion, that a more recent water system general plan is not available; thus, an updated general plan needs to be prepared.

   The updated general plan needs to show the location and size of all watermains, hydrants, valves, service lines, etc. The plan also needs to show the location of the wells, discharge piping, wellhouse, and storage facilities. As we discussed, it may be worthwhile to contact the consultant who designed the water distribution system to obtain the approved construction plans and/or an "as-built" copy of the distribution system. An updated water system general plan needs to be prepared and a copy sent to us by no later than May 15, 2010.

2. According to our records, routine pump and motor maintenance for Well #2 has not been performed within the last 10 years. As we discussed, Type-I wells (pump & motor) should be scheduled for routine maintenance once every 5 to 10 years. This type of preventative maintenance is an accepted standard that is practiced in the waterworks industry and is essential in minimizing the chance of an unexpected failure of the well pump/motor and the potential for a loss of water service. Routine pump and motor maintenance should be performed for Well #2 during 2010.

3. Our inspection revealed a cross connection in the rest room immediately behind the club house room. Specifically, a janitorial sink is provided; however, a vacuum breaker is not provided on the faucet outlet. This represents a potential cross connection between the potable water supply and the sanitary sewer in the event that a hose is connected to the faucet and is allowed to extend below the sink's overflow. As we discussed, an approved atmospheric vacuum breaker needs to be installed on the faucet outlet downstream of the hot and cold water shut-off valve.

   Next, enclosed is our Cross Connection Rules Manual that provides additional cross connection control program information and examples of potential cross connections for residential type water systems. You should reference Appendix C (Model Cross Connection Control Programs – Example No. 3 for Privately Owned Water Systems) for further examples of potential cross connections. We encourage your OIC to locate any of the more serious cross connections that may exist within the water system. Any such cross connections should be eliminated upon discovery. Finally, enclosed is an Annual Cross Connection Report form that is used to report the status of any cross connections that were discovered and the results of any corrective action.

   Finally, Chateau Du Lac has a lawn irrigation system that obtains its source water from nearby Silver Lake. The piping system, however, is not interconnected to Chateau's potable water system.

4. The most recent bacteriological sampling site plan was prepared in 2007; however, the plan should be updated to include changes in the monitoring program due to the new Groundwater Rule. An updated sampling site plan template was electronically mailed to your OIC for revision. Please provide us with a copy of the updated plan.

5. A water system emergency response plan needs to be prepared. The plan provides an outline to follow in the event of a water related emergency (loss of pressure, contamination, etc.). Enclosed is a template that can be used for preparing the emergency response plan. We will review the completed emergency response plan during our next routine site visit.

6. Storage of swimming pool equipment in the wellhouse (west half of clubhouse basement) remains a problem. These items continue to make it cumbersome to perform routine wellhouse activities. Again, we must stress the importance of storing these items in an area that is separate from the wellhouse piping and appurtenances.

7. It was noted that much of the wellhouse piping, valving, and appurtenances have been wrapped with insulation to help limit moisture on the metal surfaces and corrosion. Although this measure appears to have curtailed further corrosion, a dehumidifier should be provided to further control moisture and limit corrosion within the wellhouse.

8. The raw water meter inside the wellhouse is not functioning; thus, water usage data cannot be obtained. The raw water meter needs to be repair or replaced such that accurate water usage information can be obtained.

Finally, the lead action level was exceeded during routine lead and copper monitoring in 2008. Two consecutive six-month rounds of monitoring were conducted and the lead action level was not exceeded in either monitoring rounds. Water quality parameter monitoring and public education were also conducted in accordance to our requirements. Since both action levels were met in each of the two 6-month monitoring rounds, additional corrosion control measures will not be required. Also, routine lead/copper monitoring can resume at an annual frequency. More detailed information regarding your compliance status and future monitoring requirements will be discussed in a separate letter

If you have any questions, please call me at the number provided below.

Sincerely,

Michael F. Prysby P.E., District Engineer

Chateaux Du Lac Condominiums

Dear Mr. Carter:

SUBJECT: Drinking Water Monitoring Schedule – 2010
2009 Cross Connection Report
2009 Annual Pumpage Report

2010 Monitoring Schedule

Enclosed is your annual Drinking Water Monitoring Schedule for calendar year 2010 outlining the minimum requirements of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399), and the administrative rules. This schedule reflects your expected routine monitoring and is subject to change should federal or state regulations change.

Please Monitor Early: Collect samples early in the monitoring period (month, quarter, year) of the year indicated on the schedule. Bacteriological and partial chemistry samples should be collected close to the shipping time and sent overnight delivery to assure sample holding times are not exceeded (30 and 48 hour hold times respectively). We also recommend avoiding mailing bacteriological samples immediately preceding or following a holiday because samples tend to exceed the 30 hour hold time. When this occurs, a repeat sample must be collected as soon as possible upon notification.

If you use a private laboratory please report the results to us within the first ten days of the month following the month that you received the analysis. A list of certified laboratories is available on request. If samples are not collected on or before the dates listed on your monitoring schedule, you will incur a monitoring violation and may also be subject to a fine. For information on the fines policy, visit www.michigan.gov/deq, click on Water, Drinking Water, Community Water Supply. Scroll down to Laws & Rules and click on Administrative Fines.

To receive credit for monitoring, you must include the **"WSSN"** (water supply serial number) and the **"Site Code"** when you submit samples for analysis.
Site codes are listed on your monitoring schedule.

Site Codes: Your site codes are listed on the enclosed monitoring schedule. To receive credit for monitoring, you must include the proper Site Code when you submit samples for analysis. If you have any questions on site codes, please contact us.

Special Instructions If You Use The DEQ Laboratory: You must order your own bottles via phone, fax, or mail; *bottles will not be mailed automatically*. You can download the order form EQP 2301 by visiting www.michigan.gov/deq, click on Key Topics, Laboratory Services, Drinking Water, Drinking Water Test Fees. Please note that the DEQ laboratory is closed on most state holidays. The DEQ laboratory prices are subject to change without notice.

Special Instructions For Partial Chemistry, VOC and TTHM Samples: Please remember that these sample bottles must be cooled and properly preserved during shipment to the laboratory. If you use the DEQ laboratory, you will receive the ice pack, acid dropper (if necessary) and small cooler when you request the bottles. Please note that if you do not properly preserve your samples, they may not be used for compliance purposes and you may have to resample. If you would like more information or instructions on how to properly preserve your samples during shipment, please contact the DEQ lab, at 517-335-8184, or contact us.

Lead and Copper Monitoring: If you are due for lead and copper monitoring this year, download the Lead and Copper Report and Consumer Notice of Lead Result Certificate from http://michigan.gov/deq. Please note that there are new requirements to notify customers of lead results.

Groundwater Rule (GWR): The GWR went into effect in December, 2009. All groundwater supplies were recently sent a letter detailing their responsibilities. If you have any questions regarding the GWR, please contact us.

Consumer Confidence Report (CCR) Reminder: Your CCR showing contaminants found in your water during 2009 must be distributed to your customers, your local health department, and the DEQ by July 1, 2010.

2009 Cross Connection Report

In accordance with Act 399, an annual report on the status of the local water supply cross connection control program must be filed with the DEQ. To fulfill this requirement, please complete and return the 2009 Cross Connection Report to this office no later than March 31, 2010. The narrative portion of the report should be as extensive as necessary to accurately describe the status of the local program. Every water supply, except manufactured housing communities, must submit a report covering 2009 regardless of whether a formal program has been implemented. If you do not have any known cross connections in your water system, return the report and indicate as such. Instructions for filling out this form are on the form.

Annual Pumpage/Usage Report

In accordance with Act 399, an annual summary of water pumpage and water use must be submitted by each Type 1 water supply that does not submit monthly operation reports. To manage our natural resources, pumpage data are compiled to determine water use demands in Michigan. Please complete and return the Annual Pumpage/Usage Report to this office no later than March 31, 2010.

Forms: The report forms mentioned in this letter can be downloaded in both Microsoft Word and in PDF from: http://www.michigan.gov/deq, click on Water, Drinking Water, Community Water Supply. Scroll down to Manuals, Forms & Brochures. Click on Reporting Forms. Forms are also enclosed.

Additional Requirements That May Apply to Your Water System

You may have monitoring requirements in 2010 that are not listed on the attached schedule. The United States Environmental Protection Agency contacted you previously about these requirements under the federal Stage 2 Disinfectants and Disinfection Byproducts Rule or the Long Term 2 Enhanced Surface Water Treatment Rule.

If you have any questions about the requirements or filling out the forms, please call me at the number below.

JENNIFER M. GRANHOLM
GOVERNOR

REBECCA A. HUMPHRIES
DIRECTOR

May 24, 2010

TO: Water Supply Superintendent or Operator In Charge

FROM: Water Bureau, Lansing District Office

SUBJECT: 2010 Consumer Confidence Report Reminder

As you prepare your Consumer Confidence Report (CCR) summarizing information about the drinking water quality served during calendar year 2010, we want to remind you of some of the requirements. Refer to last year's report and your most recent sample results when putting this year's report together. **The CCR must be delivered to your customers, the local health department, and our office by July 1st.** If you are a wholesaler, you should have provided monitoring results to the systems that retail your water by April 1st or by the date you and your customers have agreed to, if earlier.

In addition to delivering your CCR to your consumers by July 1st, remember to:

- Send a copy to our office when you deliver it to your consumers, and
- Send a copy to your local health department when you deliver it to your consumers, and
- Post the CCR on the Internet if your water system serves 100,000 or more people, and
- Send us documentation certifying how you delivered the CCR. For example, enclose copies of newspaper articles, or lists of where you posted the CCR, or other documentation showing how it was delivered.

Certification of delivery is due to us by October 1st, but we encourage you to send it to us when you deliver the CCR by July 1st. To download the *CCR Certificate of Distribution Form*, visit http://michigan.gov/dnre. Under Environmental Services, click on Water, Drinking Water, Community Water Supply, and Consumer Confidence Report Rule. We also encourage you to read *Preparing Your CCR* found on the same Web page.

Disinfection Byproduct and *Cryptosporidium* Monitoring: If you monitored in 2009 for the disinfection byproducts, total trihalomethanes and haloacetic acids, or *Cryptosporidium* under the new federal regulations, you must include detections of this monitoring with an explanation.

New Language for Lead: Beginning this year (the CCR covering 2009), every CCR must include information about lead, *even if monitoring for lead was not conducted.* Delete any lead language you have used in the past and include the following new language:

> *New lead language*: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. [NAME OF UTILITY] is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Reminder if Lead and Copper Monitoring Due This Year: Recent changes to the Lead and Copper Rule requires you to provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected, within 30 days of learning of results. You must also send us a certification that you met all the delivery requirements along with a sample copy of your customer notice within 3 months after the end of the monitoring period. To download the *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Microsoft Word or PDF format, visit http://michigan.gov/gnfa. Under Environmental Services, click on Water, Drinking Water, Community Water Supply, and Reporting Forms.

Please contact us with your questions. We would like to be available to answer all your questions as you draft your CCR, but we have found that our office is inundated with questions as the deadline nears. You might be best served if you contact us before the end of May.

Public water system monitoring and reporting violations, including failure to post public notices, are covered in our fines policy. Failure to deliver the CCR by July 1st is a reporting violation and may result in a fine. Contact our office if you would like a summary of our fines policy.

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING

RICK SNYDER
GOVERNOR

DAN WYANT
DIRECTOR

August 26, 2011

TO: Water Supply Superintendent or Operator In Charge

SUBJECT: 2011 Drinking Water System Monitoring – Reminder

This is just a friendly reminder that drinking water monitoring is due by September 30, 2011. This is not a notice of violation. Contacting water systems provides the Department of Environmental Quality (DEQ) a chance to remind supplies of upcoming deadlines, and allows supplies the chance to verify that their records for submitted sample results match what the DEQ has received.

According to our records, not all drinking water monitoring has been performed as outlined in the 2011 Monitoring Schedule sent to you earlier this year. Please refer to the enclosed monitoring schedule to view the sampling for which we have not yet received laboratory results. If you have results for monitoring listed in the schedule, please provide a copy to this office.

If monitoring has not yet been completed, please collect the required sample(s) no later than **September 30, 2011**, unless otherwise noted, to avoid monitoring violations, public notice requirements, and administrative fines of at least $200.00. If you use a private laboratory to analyze your samples, you must provide this office with copies of the results by October 10, 2011.

To receive credit for monitoring, you must include the **"WSSN"** (water supply serial number) and the **"Site Code"** when you submit samples for analysis. These codes are listed on your monitoring schedule.

Reminder if Lead and Copper Monitoring Due This Year: Recent changes to the Lead and Copper Rule requires you to provide individual lead tap results, within 30 days of learning of results, to people who receive water from sites that were sampled, even if lead was not detected. You must also send us a certification that you met all the delivery requirements along with a sample copy of your customer notice within 3 months after the end of the monitoring period. To download the *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Microsoft Word or PDF format, visit http://michigan.gov/DEQ. Under Environmental Services, click on Water, Drinking Water, Community Water Supply, and Reporting Forms.

If you have any questions or believe that the enclosed monitoring schedule is not accurate, please contact Adam Rosenthal at 517-335-6131 or rosenthala@michigan.gov., or you may contact your district engineer:

Michael Prysby at 517-335-6122 or prysbym@michigan.gov – Genesee & Lapeer Co.
Bethel Skinker at 517-335-6127 or skinkerb@michigan.gov – Eaton, Ingham & Shiawassee Co.
Mark Joseph at 517-335-6349 or josephm@michigan.gov – Clinton, Gratiot & Livingston Co.

2011 Monitoring Schedule

CHATEAUX DU LAC CONDOMINIUMS — WSSN: 01353

Collect samples early in the monitoring period. This schedule reflects your expected routine monitoring and is subject to change. To receive credit for monitoring, include the **WSSN** and the **Site Code** on your request for analysis form. Collect Bacteriological and Automated Partial Chemistry samples close to the shipping time and send overnight delivery. Send all sample results to your Department of Natural Resources and Environment (DNRE) district office unless you use the DNRE laboratory. Test codes, sample units, and costs are listed to help you complete the DNRE laboratory form. Prices are subject to change without notice. The DNRE laboratory is closed on state holidays.

Location: Well 1 or 2 - Point Of Entry

Collect these samples at the entry point to the distribution system (after treatment, if applicable.)

Sample Type	# Samples/ Frequency	Collect Before	Site Code	Fee	Unit Number	Test Code
Automated Partial Chemistry	This DNRE lab scan includes nitrate, nitrite, fluoride, and sodium whose monitoring frequency requirements differ from one another. Before requesting analyses from a laboratory other than the DNRE laboratory, check with your DNRE district staff for the specific monitoring requirements.

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Water System, Chateau Du Lac Condominium

This letter confirms my visit on October 21, 2011, with Mr. Robert Stucker, your operator-in-charge (OIC). The purpose of the visit was to conduct routine water system surveillance at Chateau Du Lac condominiums. We are somewhat disappointed in the lack of progress made towards correcting the water related concerns that were noted in the Chateau Du Lac 2009 Water System Review. These concerns are discussed in more detail below.

1. Chateau Du Lac's most recent water system general plan is clearly outdated and the plan has not been updated as we requested. As we discussed, an "as-built" copy of the general plan needs to be obtained and may be available from the consultant who designed the water distribution system. An updated water system general plan needs to be prepared and a copy sent to us by no later than January 31, 2012.

2. A water system Emergency Response Plan (ERP) has not been prepared as we requested. The ERP provides an outline to follow in the event of a water related emergency (loss of pressure, contamination, etc.). A template that can be used for preparing the ERP was provided to your OIC. We will review the completed ERP during our next routine site visit.

3. Dehumidification has not been provided as a means to control moisture and limit corrosion within the wellhouse.

4. The raw water meter inside the wellhouse is not functioning and has not been replaced as we requested. The raw water meter needs to be repaired or replaced such that accurate water usage information can be obtained by no later than January 31, 2012.

5. Chateau Du Lac's lead action level was exceeded during routine lead and copper monitoring in 2011. Two consecutive six-month rounds of lead and copper monitoring will be required, along with water quality parameter monitoring and public education. Specific monitoring & reporting details will be covered in a separate letter. Finally, the 2011 exceedance represents the 4th exceedance in the lead and copper action level since the start of the lead and copper monitoring program. We will be reviewing the history of Chateau Du Lac's lead and copper monitoring program to determine whether a corrosion control study needs to be conducted and/or treatment needs to be provided.

Finally, according to our records, routine pump and motor maintenance for Well #2 has not been performed within the last 12 years. As we discussed, Type-I wells (pump & motor) should be scheduled for routine maintenance once every 5 to 10 years. This type of preventative maintenance is an accepted standard that is practiced in the waterworks industry and is essential in minimizing the chance of an unexpected failure of the well pump/motor and the potential for a loss of water service. Routine pump and motor maintenance should be performed for Well #2 during 2012

We look forward to working with you on these and on any other water related matters. Should you require further information, please contact me at the telephone number below, via e-mail at prysbym@michigan.gov; or Department of Environmental Quality P.O. Box 30242, Lansing, Michigan 48909.

Sincerely,

Michael F. Prysby, P.E.
District Engineer
Resource Management Division

June 19, 2012

Mr. Larry Carter
5454 Gateway Boulevard
Flint, Michigan 48507

Dear Mr. Carter:

Subject: Chateau Du Lac Condominiums WSSN 01353
Lead and Copper Monitoring - Action Level (AL) Exceedance

The Chateau Du Lac Condominiums exceeded the AL(s) for lead during the most recent round of lead and copper monitoring of drinking water taps from June 1 to September 30, 2011, as summarized below.

Contaminant	AL	90% of samples at or below this level	Number of samples above the AL
Lead	15 parts per billion (ppb)	26 ppb	1
Copper	1.3 parts per million (ppm)	0.085 ppm	0

An AL exceedance is not a violation, but triggers other requirements under the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. Requirements include water quality parameter (WQP) monitoring, source water monitoring, corrosion control treatment, and public education.

Deliver Customer Notice of Lead Result
Recent changes to the Lead and Copper Rule require you to provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected, within 30 days of learning of results. You must also send us a certification that you met all the delivery requirements along with a sample copy of your customer notice. These items were received October 26, 2011.

Distribute Public Education (PE)
A certificate that the PE materials were distributed to all consumers was received. Repeat each year until the lead AL is no longer exceeded. This material is intended to educate consumers about lead health effects, sources, and steps to minimize exposure. Note that the PE material must include information about the exceedance in your water supply, information about what you are doing to reduce lead levels, information about lead service lines in your distribution system, and information about the history of lead levels in your water supply.

Consumer Confidence Report (CCR)
Include this AL exceedance in your CCR, which is due to our office, your customers, and the local health department, by July 1, 2012. Also include the following statement in the CCR, regardless of the lead and copper levels:

> *If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Chateau Du Lac Condominiums is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at http://water.epa.gov/drink/info/lead.*

What's Next?
If you can show that both lead and copper ALs are met in two consecutive six month periods, then many of the requirements outlined in this letter will no longer apply. However, in the meantime, you must propose a corrosion control treatment plan or propose to perform a corrosion control study. If treatment is found to be necessary, it must be installed. We will work with you to complete these corrosion control steps to optimize your corrosion control treatment.

Timetable of Requirements

Complete By	Requirement	Comments
Right away	Deliver *Customer Notice Of Lead Result* to persons served at each site tested within 30 days of knowing the result.	Download *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Word or PDF format from http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms.
November 30, 2011	Collect WQP samples.	Collect 2 samples at least 24 hours apart from each entry point to the distribution system. Collect 2 samples at least 24 hours apart from the distribution system. Repeat each lead and copper monitoring period until both ALs are met.
November 30, 2011	Perform PE activities including delivering PE materials to all consumers.	PE required activities are listed in enclosed template and checklist. Repeat every year until the lead AL is met in the most recent round of sampling.
December 10, 2011	Send us certification of PE compliance along with a sample copy of the materials delivered.	Sample certification enclosed. Required whenever PE required.
December 31, 2011	Send us certification of customer notice of lead result compliance along with a sample copy of the notice delivered.	Download *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Word or PDF format from http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms.
March 31, 2012	Collect one lead and copper sample from each entry point to the distribution system.	Repeat every third year until both ALs are met for the whole 3 year period.

Conduct WQP Monitoring

Water Quality Parameter monitoring was completed December 2011, in which two WQP samples were collected 24 hours apart from the entry point to the distribution system and two samples 24 hours apart from 57 Chateau Du Lac Drive in the distribution system. The WQP samples were analyzed for pH, alkalinity, calcium, conductivity, and temperature. Continue sampling for WQP during each lead and copper monitoring period until at least 90% of lead and copper tap results meet both ALs.

To order bottles, call the Department of Environmental Quality (DEQ) laboratory at 517-335-8184, or download the form EQP 2301 *Requisition for Water Sample Units* from http://michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining the Necessary Sampling Units, and test list. The tests are analyzed from one sample bottle per location. Request the analyses using the following test codes:

Test Code	Cost (as of 06/15/2007)	Bottle Number	Test Description
CORR	$51.00	33	Conductivity, Alkalinity, Phosphate, and Calcium
CPH	$13.00	33	pH Determination

Conduct Source Water Monitoring

Source water monitoring was conducted in December 2011. Repeat every third year until both lead and copper ALs are met during the entire three year period.

Correct the Problem

Minimize lead and copper in drinking water by reducing corrosion of water pipes and household plumbing that contain lead and copper. To accomplish this, you must propose a corrosion control treatment plan or propose to perform a corrosion control study by July 31, 2012. If treatment is found to be necessary, it must be installed and samples collected to ensure the lead and copper ALs are consistently met. Contact us for guidance on corrosion control options.

Lead and Copper Monitoring

You are not required to conduct lead and copper tap monitoring until after you install corrosion control treatment. However, at your option, you may conduct additional rounds of monitoring. If the action levels are met during future rounds of monitoring, you may discontinue the corrosion control study and installation of treatment. If the lead action level is met in two consecutive six month monitoring periods, you may discontinue your public education activities. It is recommended that you collect another round of lead and copper tap samples during the January 1-June 30, 2012, monitoring period. Select the same sites used in previous monitoring periods, giving Tier 1 sites first priority. Within 30 days of learning of results, provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected. All monitoring, reporting, customer notification and DEQ certification requirements remain in effect.

Complete By	Requirement	Comments
July 31, 2012	Submit a proposal for optimal corrosion control treatment or a corrosion control study.	Contact us for guidance on corrosion control options. Corrosion control study and treatment installation may cease if both ALs are met during 2 consecutive 6 month monitoring periods.
Between January 1 and June 30, 2012	Collect 10 samples from the distribution system and have them analyzed for lead and copper.	Report the results to the DEQ and deliver the customer notice of individual lead results using the downloadable *Lead and Copper Report and Consumer Notice of Lead Result Certificate*.
July 1, 2012	Report the 2011 AL exceedance in the Consumer Confidence Report.	Specific lead health effects language must be included.

We recognize that the Lead and Copper Rule is complex and may be confusing. We will continue to offer assistance in implementing these regulations.

Dear Mr. Carter:

SUBJECT: Drinking Water Monitoring Schedule – 2013
Annual Reports

Enclosed is your Drinking Water Monitoring Schedule for calendar year 2013 outlining the minimum requirements for your public water supply. Collect samples early in the monitoring period of the year indicated on the schedule. If you use a private laboratory you are required to report the results to us within the first ten days of the month following the month that you received the results. To receive credit for monitoring, the **"WSSN"** (water supply serial number), the **"Site Code,"** and **"County"** must appear on the sample result. Bottles will NOT be mailed automatically. To order bottles, call the DEQ Laboratory at 517-335-8184. Be certain of the EPA sampling and analysis method requirements for hold times.

The Michigan Safe Drinking Water Act requires certain reports to be submitted to this office each year. Please remember that cross connection reports and annual pumpage reports are due by March 31, and the **Consumer Confidence Report** is due by July 1.

Also enclosed is the document "2013 Monitoring and Reporting Requirements." This provides additional details about monitoring and reporting requirements. If you have any questions, please contact us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

2013 Monitoring and Reporting Requirements

Please Monitor Early: Collect samples early in the monitoring period (month, quarter, year) of the year indicated on the schedule. Bacteriological and partial chemistry samples should be collected close to the shipping time and sent overnight delivery to assure sample holding times are not exceeded (30 and 48 hour hold times respectively). We also recommend avoiding mailing bacteriological samples immediately preceding or following a holiday because samples tend to exceed the 30 hour hold time. When this occurs, a repeat sample must be collected as soon as possible upon notification.

If you use a private laboratory please report the results to us within the first ten days of the month following the month that you received the results. A list of certified laboratories is available on request. If samples are not collected as indicated on your monitoring schedule, you will incur a monitoring violation and may also be subject to a fine. For information on the fines policy, visit http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Administrative Fines.

To receive credit for monitoring, you must include the **"WSSN"** (water supply serial number), the **"Site Code,"** and the **"County"** when you submit samples for analysis. Site codes are listed on your monitoring schedule.

Special Instructions If You Use The DEQ Laboratory: Bottles will NOT be mailed automatically. To order bottles, call the DEQ Laboratory at 517-335-8184 or download the form EQP 2301 *Requisition for Water Sample Units* from www.michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining The Necessary Sampling Units, and 'test list'. Please note that the DEQ laboratory is closed on most state holidays. The DEQ laboratory prices are subject to change without notice.

Special Instructions For Automated Partial Chemistry, VOC and TTHM Samples: These sample bottles must be cooled and preserved during shipment to the laboratory. If you use the DEQ laboratory, you will receive the ice pack, acid dropper (if necessary) and small cooler when you request the bottles. Samples must be preserved correctly to be used for compliance purposes. To avoid resampling follow instructions contained with the sample bottle. If you would like more information, contact the DEQ lab, at 517-335-8184, or contact this office.

Groundwater Rule (GWR): The GWR went into effect in December, 2009. All groundwater supplies were sent a letter in 2010 detailing their responsibilities. If you have any questions regarding the GWR, please contact this office.

Reminder if Lead and Copper Monitoring Due This Year: You must provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected, within 30 days of learning of results. You must also send us a certification that you met all the delivery requirements along with a sample copy of the customer notice within 3 months after the end of the monitoring period. Water supplies that failed to distribute the Consumer Notice of Lead Results must include the following statement in their CCR, "During the year, we failed to provide lead results to persons served at the sites that were tested as required by the Lead and Copper Rule." To download the *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Microsoft Word or PDF format, visit www.michigan.gov/deq. Click on Water, Drinking

2013 Monitoring Schedule

CHATEAUX DU LAC CONDOMINIUMS

WSSN: 01353

Collect samples early in the monitoring period. This schedule reflects your expected routine monitoring and is subject to change. To receive credit for monitoring, include the **WSSN**, **Site Code**, and **County** on your request for analysis form. Collect Bacteriological and Automated Partial Chemistry samples close to the shipping time and send overnight delivery. Send all sample results to your Department of Environmental Quality (DEQ) district office unless you use the DEQ laboratory. Test codes, sample units, and costs are listed to help you complete the DEQ laboratory form. Prices are subject to change without notice. The DEQ laboratory is closed on state holidays.

Location: Well 1 or 2 - Point Of Entry

Collect these samples at the entry point to the distribution system (after treatment, if applicable.)

Sample Type	# Samples/ Frequency	Collect Before	Site Code	Fee	Unit Number	Test Code
Automated Partial Chemistry	This DEQ lab scan includes nitrate, nitrite, fluoride, and sodium whose monitoring frequency requirements differ from one another. Before requesting analyses from a laboratory other than the DEQ laboratory, check with your DEQ district staff for the specific monitoring requirements.

Chateaux Du Lac Condominiums

Dear Mr. Carter:

SUBJECT: Drinking Water Monitoring Schedule – 2009
2008 Cross Connection Report
2008 Annual Pumpage Report

2009 Monitoring Schedule

Enclosed is your annual Drinking Water Monitoring Schedule for calendar year 2009 outlining the minimum requirements of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399), and the administrative rules. This schedule reflects your expected routine monitoring and is subject to change should federal or state regulations change.

Please Monitor Early: Collect samples early in the monitoring period (month, quarter, year) of the year indicated on the schedule. Bacteriological and partial chemistry samples should be collected close to the shipping time and sent overnight delivery to assure sample holding times are not exceeded (30 and 48 hour hold times respectively). We also recommend avoiding mailing bacteriological samples immediately preceding or following a holiday because samples tend to exceed the 30 hour hold time. When this occurs, a repeat sample must be collected as soon as possible upon notification.

If you use a private laboratory please report the results to us within the first ten days of the month following the month that you received the analysis. A list of certified laboratories is available on request. If samples are not collected on or before the dates listed on your monitoring schedule, you will incur a monitoring violation and may also be subject to a fine. A summary of the fines policy can be downloaded from www.michigan.gov/deq, click on Water, Drinking Water, Community Water Supply. Scroll down to Laws & Rules and click on Administrative Fines.

To receive credit for monitoring, you must include the **"WSSN"** (water supply serial number) and the **"Site Code"** when you submit samples for analysis. Site codes have changed. These codes are listed on your monitoring schedule.

Special Instructions If You Use The DEQ Laboratory: You must order your own bottles using the enclosed "Requisition for Sample Units" via phone, fax, or mail; *bottles will not be mailed automatically*. You can download the form from www.michigan.gov/deq, click on Key Topics, Laboratory Services, Drinking Water, Drinking Water Test Fees. Please note that the DEQ laboratory is closed on most state holidays. The DEQ laboratory prices are subject to change without notice.

Special Instructions For Partial Chemistry, VOC and TTHM Samples: Please remember that these sample bottles must be cooled and properly preserved during shipment to the laboratory. If you use the DEQ laboratory, you will receive the ice pack, acid dropper (if necessary) and small cooler when you request the bottles. Please note that if you do not properly preserve your samples, they may not be used for compliance purposes. If you would like more information or instructions on how to properly preserve your samples during shipment, please contact the DEQ lab, at 517-335-8184, or your DEQ compliance person.

Lead and Copper Monitoring: If you are due for lead and copper monitoring this year, monitoring is not complete until you fill out the Lead and Copper Report Form.

Consumer Confidence Report (CCR) Reminder: Your CCR showing contaminants found in your water during 2008 must be distributed to your customers, your local health department, and the DEQ by July 1, 2009.

2008 Cross Connection Report

In accordance with Act 399, an annual report on the status of the local water supply cross connection control program must be filed with the DEQ. To fulfill this requirement, please complete and return the enclosed 2008 report form to this office no later than March 31, 2009. The narrative portion of the report should be as extensive as necessary to accurately describe the status of the local program. Every water supply, except manufactured housing communities, must submit a report regardless of whether a formal program has been implemented. Manufactured housing communities are encouraged to develop a cross connection control program. If you do not have any known cross connections in your water system, return the report and indicate as such. Instructions for filling out this form are included.

2008 Pumpage Report

In accordance with Act 399, an annual report of water pumpage and/or water use must be submitted by each Type 1 water supply that does not submit monthly operation reports. To manage our natural resources, pumpage data are compiled to determine water use demands in Michigan. If you do not submit a monthly operation report, complete and return the enclosed report form to this office no later than March 31, 2009.

For your convenience, the report forms mentioned in this letter can be downloaded from: http://www.michigan.gov/deq, click on Water, Drinking Water, Community Water Supply. Scroll down to Manuals, Forms & Brochures. Click on Reporting Forms.

Additional Requirements That May Apply to Your Water System

You may have monitoring requirements in 2009 under the federal Stage 2 Disinfectants and Disinfection Byproducts Rule, the Long Term 2 Enhanced Surface Water Treatment Rule, or the Unregulated Contaminant Monitoring Rule. The United States Environmental Protection Agency will contact you directly if your system is required to monitor in 2009.

If you have any questions about the requirements or filling out the forms, please call me at the number below.

Larry,

Chateau Du Lac Condominiums was informed by the MDEQ on December 17, 2013 of the Lead & Copper Action Level Exceedance. Chateau Du Lac was given a Jan 31, 2014 deadline to propose a corrosion control treatment plan. We have not received a response or proposal from Chateau Du Lac concerning this matter. Please contact me at your earliest convenience to discuss this matter further.

Subject: RE: Chateaux control treatment plan

Larry,

Thanks for your response regarding this matter. To help expedite the process of selecting an optimal corrosion control treatment plan you will need to contact a consultant who specializes in water treatment and corrosion control. Listed below are a few, but not limited to, local area engineering firms that can provide assistance in water treatment....

Rowe Incorporated : 810 341-7500
Wade-Trim: 810 235-2555
Fleis & Vandenbrink 810 743-9120

To: Prysby, Mike (DEQ)
Subject: Chateaux control treatment plan

Mike:

Sorry about the delay. I thought that was something that Bob Stucker could handle but not the case. Birkmeier Well Drilling is attempting to put me in touch with a firm that can help provide the type of plan requested. I will keep you posted as I learn more details.

Thanks

Larry Carter

Dear Mr. Carter,

Since 2011, Chateau Du Lac Condominiums (CDLC) has exceeded the Action Level (AL) for lead established by the 1993 Lead and Copper Monitoring Program. In order to minimize the occurrence of lead and copper, a corrosion control program should be implemented.

To reduce the lead below the AL, it is recommended that a Phosphate Injection System be installed. With the introduction of phosphate, the possibility of micro-organism growth (bio-film) increases. To counter-act these effects, the addition of a Chlorine Injection System should be installed.

To establish a baseline, the system will inject phosphate at a rate of 2 parts per million (ppm) and chlorine at a rate of 0.5 ppm.

With the addition of a treatment system, the lead levels should reduce significantly below the lead AL.

Please contact me if you have any further questions or concerns.

Sincerely,

Marty Zuber
Manager

Subject: Chateau Du Lac Condominiums Lead Action Level Exceedance

Marty,

We received a copy of your letter dated February 17, 2014 to Mr. Larry Carter of Piper Reality recommending installation of a phosphate injection system and a chlorine feed system at Chateau-Du Lac condominium to help this supply re-achieve compliance with the Lead action level. Prior to installing the chemical feed system, an Act 399 construction permit is required from our office. A completed permit application needs submitted to the MDEQ and include a drawing of the proposed chemical feed system (depict locations of injection points, feed barrel, metering pumps, etc.). The proposal also needs to include a basis of design, metering pump specs, means to monitor chem feed - scales, chemical product (meets ANSI-NSF Standard 60), etc. Following our review and approval, a construction permit will be issued. If you have any questions, please don't hesitate to call me at the number provided below.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

Correct original for corrosion control

Proposal by end of month

Impose Iron Levels

Lead 90th Exceedances at Chateau Du-Lac

Year	Lead 90th Percentile Result (used for compliance for lead action level)
1994:	49 ppb
2004:	20 ppb
2008:	59 ppb
2011:	26 ppb
2012 (R1)*	25 ppb
2012 (R2)*	39.5 ppb
2013 (R1)*	33 ppb
2014:	79 ppb

Locations at or above the lead Action Level:
* R1 - First monitoring period of calendar year
* R2 - Second monitoring period of calendar year

Year:	Location:	Result:
1994	2 sites	> 15 ppb
1995	22 Chateau Du Lac Drive	18 ppb
1998	23 Chateau Du Lac Drive	1155 ppb
1998	23 Chateau Du Lac Drive	168 ppb
2004	64 Chateau Du Lac Drive	33 ppb
2005	1 Chateau Du Lac Drive	19 ppb
2006	23 Chateau Du Lac Drive	21 ppb
2007	23 Chateau Du Lac Drive	225 ppb
2007	64 Chateau Du Lac Drive	15 ppb
2008	23 Chateau Du Lac Drive	115 ppb
2011	23 Chateau Du Lac Drive	43 ppb
2012 (R1)	59 Chateau Du Lac Drive	25 ppb
2012 (R1)	71 Chateau Du Lac Drive	122 ppb
2012 (R2)	23 Chateau Du Lac Drive	74 ppb
2013 (R1)	13 Chateau Du Lac Drive	85 ppb
2013 (R1)	21 Chateau Du Lac Drive	15 ppb
2013 (R1)	11 Chateau Du Lac Drive	51 ppb
2014 (R2)	14 Chateau Du Lac Drive	188 ppb
2014 (R2)	14 Chateau Du Lac Drive	95 ppb

The individual sample results/locations listed immediately above may or may not necessarily caused an exceedance in the lead 90th percentile calculation in all monitoring periods; however they show significantly high concentrations of lead in the drinking water at multiple (9)locations.

May 25, 2015

Mr. Russell Hudson, Director of Engineering Services
McLaren Flint
401 South Ballenger Highway
Flint, MI 48532

Dear Mr. Hudson:

SUBJECT: McLaren Flint – Potable Water System – Supplemental Treatment

This letter confirms my meeting on April 29, 2015, with you and other representatives of McLaren Flint. Mr. Stephen Busch from our office was also present. The purpose of the meeting was to discuss risk management for McLaren's potable water plumbing system and to provide guidance towards achieving a more comprehensive risk management program. A tour of the hospital water system included a sodium hypochlorite chemical feed system installed at a confluence of water service lines into the building. Our examination of this chemical feed system discovered that it was not constructed in accordance with the Recommended Standards for Water Works and requirements of the Michigan Safe Drinking Water Act, and must be modified as follows to ensure proper operation and protection of public health.

- Currently the chlorine feed pump operates at a constant feed rate, adjusted manually, while the water supply booster pumps vary flow using variable frequency drives to maintain a constant water pressure. This does not allow for a uniform chemical dosage concentration, and can lead to both under and overfeeding of the chemical as well as disinfectant byproduct formation. To address this situation, a flow pacing chemical feed pump must be installed. This type of pump will automatically adjust the chemical feed rate based on the flow rate of the water supply pumps to provide a consistent dosage concentration. This will also allow chlorine disinfectant to be fed at all times.

- Operation of a chemical treatment system requires routine observation. However, the current configuration does not allow dosage determinations to be made. This is necessary to identify changes in chlorine demand. To accomplish this, a scale must be provided that allows for the amount of sodium hypochlorite solution by weight from the drum to be measured and recorded on a daily basis. A scale with digital readout is recommended. The volume of water used over the same time must also be determined and recorded in order to calculate the dosage of chlorine using the following calculation.

  $$\text{Chlorine Dosage (mg/L)} = \frac{HypochloriteSolution(lbs) \times 0.125}{Water(gallons) \times 8.34 \times 10^{-6}}$$

- Samples for chlorine residual measurement are being taken at various locations within the hospital using a Hach Model CN-66 test kit. This kit uses a color comparator disc for basic measurement, which can cause readings to vary depending on light conditions and operator vision. A test kit that provides digital

measurement is recommended. A model can be obtained that is also suitable for measuring residual during both normal chemical feed operation and hyperchlorination events. The hospital may also want to consider the use of a continuous chlorine residual analyzer at select locations, which have alarm capabilities for low and/or high chlorine levels.

  - Only chemical reagents specifically designed for the make and model of your test kit unit should be used for sample analysis.
  - Chlorine residual measurements should be made each day at locations within the building and at a location slightly downstream of the chemical feed point

- Chemical feed dosage determinations and chlorine residual measurements must be recorded. An operations form template is enclosed for your use.

- The existing chlorine feed tap appeared to have excessive buildup at the injection location. A tap with a removable injection quill that can be placed with the feed tip at the center of the pipeline will allow for maintenance and better chemical distribution.

Prior to alteration of the chlorine feed system, an Act 399 construction permit for the proposed work must be obtained from our office. A copy of the permit application is enclosed and may also be obtained from the DEQ website.

Should you require further information, please contact me at the telephone number below; via e-mail at prysbym@michigan.gov; or Department of Environmental Quality, P.O. Box 30242, Lansing, Michigan 48909.

Mr. Larry Carter
C/o Chateau Du Lac Condominium
Piper Realty
5454 Gateway Center
Flint, Michigan 48507

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Chateau Du Lac Condominium – Lead & Copper Action Level Exceedance

This letter will confirm my visit with Mr. Robert Stucker, your operator-in-charge (OIC), on December 5, 2013, at Chateau Du Lac Condominiums (CDLC). The purpose of the site visit was to confirm installation of the raw water meter and elimination of the cross connection on the pool fill line.

Based upon our site inspection and your February 21, 2013, response letter, raw water metering has been provided and an approved reduced pressure zone backflow preventer device was installed on the pool fill line. Since raw water metering has been provided, water usage will need to be monitored and reported on a yearly basis (annual pumpage report). Your OIC can assist you in completing the annual pumpage report each year.

Next, the insulation around each hydropneumatic storage tank should be removed in order to perform a visual inspection of each tank and to complete any necessary maintenance and/or repairs. We also question the need to insulate the tanks since the wellhouse room temperature does not fall below freezing. We recommend that the insulation be permanently removed.

Next, the CDLC exceeded the Action Level (AL) for lead in 2011 and has continued to exceed the lead AL in all subsequent 6-month monitoring periods. Our records show that the CDLC has failed to meet the lead AL for seven routine monitoring periods since establishment of the lead and copper monitoring program in1993.

Given the number of lead AL exceedances, the CDLC no longer has the option to conduct additional rounds of lead and copper monitoring in an attempt to meet future ALs. The CDLC must minimize lead and copper in the drinking water by reducing the corrosion of water pipes and household plumbing that contain lead and copper. The CDLC must propose a corrosion control treatment plan by January 31, 2014. Potential

types of corrosion control treatment may include; addition of phosphate or silica based-based corrosion inhibitor, pH and alkalinity adjustment, or calcium adjustment. We encourage you to retain a consultant who specializes in water treatment for further assistance in selecting the optimal type of corrosion control treatment. After treatment is installed, monitoring for lead and copper will resume to ensure the lead and copper ALs are consistently met. Finally, prior to installing corrosion control treatment, an Act 399 construction permit must be issued by our office authorizing the proposed work.

Finally, the CDLC must provide customer notice of the most recent lead sample results and continue to distribute public education materials in accordance to the guidelines provided in our June 19, 2012, letter (copy enclosed).

If you have any questions, feel free to contact me at the number listed below, at prysbym@michigan.gov; or Department of Environmental Quality, Office of Drinking Water and Municipal Assistance, Lansing District Office, 525 West Allegan Street, 1st Floor South, P.O. Box 30242, Lansing, Michigan 48909-7742.

Dear Mr. Carter:

SUBJECT: Chateau Du Lac Condominium - Water System Sanitary Survey

This letter will confirm my visit with Mr. Robert Stucker, your operator-in-charge (OIC), on November 15, 2012, and summarize the subsequent review and discussion of the water supply facilities serving Chateau Du Lac Condominium. The purpose of this meeting was to evaluate the water system with respect to the requirements of the Michigan Safe Drinking Water Act 1976 PA 399, as amended (Act 399). In addition, the enclosed Water System Review form was updated to gather information on the Chateau Du Lac Condominium water supply system.

This most recent evaluation confirms that the water system Emergency Response Plan (ERP) was completed. Aside from a few minor revisions that will be completed by your OIC, the ERP meets our requirements. A copy of the ERP should be kept in the wellhouse for use in the event of a water related emergency. The ERP should also be updated every two to three years or if there are any water related changes. Also, dehumidification was provided inside the wellhouse as a means to reduce moisture and the rate of corrosion.

Next, the following table summarizes our findings from our survey of the water system:

Survey Element	Findings
Source	**Deficiencies Identified**
Treatment	No deficiencies/recommendations
Distribution System	**Deficiencies Identified**
Finished Water Storage	Recommendations made
Pumps	Recommendations made
Monitoring & Reporting	**Deficiencies Identified**
Management & Operations	No deficiencies/recommendations
Operator Compliance	No deficiencies/recommendations
Security	No deficiencies/recommendations
Financial	No deficiencies/recommendations
Other	Not evaluated

The following deficiencies are violations of the Act 399, and must be resolved in order to return the water system to compliance.

1. The raw water meter inside the wellhouse is not functioning and has not been repaired or replaced as we requested in our previous correspondence. This is a violation of Act 399, Rule 325.10829(a).

2. Annual pumpage reports are not being prepared and submitted to the Department of Environmental Quality (DEQ) by March 30th of the following year as required in Act 33, Rule 325.11504(1)(2). The lack of a functioning raw water meter contributes to this violation.

3. A cross connection exists between the clubhouse domestic plumbing and the swimming pool fill line. Although the connection is physically disconnected during the winter months, an acceptable backflow prevention device needs to be installed in the vicinity of the connection since this line is re-connected during the summer months. An approved vacuum breaker is the type of device that will be required for this application. Enclosed is a list of approved vacuum breakers.

Next, it is hoped that the following recommendations will prove useful in enhancing the operation and maintenance of your water supply.

4. Establish accurate hydrant and valve records. Accurate records are essential for effective operation and maintenance of the distribution system and they also play an important role in mitigating water system emergencies.

5. Remove the insulation (temporarily) from each hydro-pneumatic tank and inspect their external surface for corrosion. If the tanks are showing signs of corrosion, their surface should be re-coated with an epoxy coating system suitable for potable water storage tanks. The surface of each tank should be adequately prepared (abrasive removal of old paint system and corrosion) prior to applying the new epoxy coating system.

Please submit a letter by January 15, 2013, that outlines Chateau Du Lac's plans and schedule to address the above items.

Additionally, there were a number of changes made to Act 399 in 2009 that place new or modified requirements on water systems as of January 1, 2016. These changes are summarized below:

- General Plans: Now required for manufactured housing communities, health care facilities, and community water system serving less than 50 living units or 200 people. Chateau Du Lac has been reminded of the need to provide an accurate water system general plan. An "as-built" copy of the general plan needs to be compiled and may be available from the consultant who designed the water system.

Please ensure that *Chateau Du Lac Condominium* is in compliance with the requirement listed above.

Finally, additional lead and copper monitoring is being conducted to address the lead action level exceedance in 2011. Both the lead and copper action levels must be met for two consecutive six month periods in order to forgo the public education requirement and the need to pursue corrosion control treatment. Please reference the June 19, 2012, letter (copy enclosed) that provides guidance concerning the most recent lead action level exceedance.

Based upon the monitoring conducted in 2012 thus far, the lead action level has not been met. Lead and copper monitoring will need to continue through June 30, 2013, in order to determine compliance with the lead and copper action level. The specific lead and copper monitoring requirement will be discussed in Chateau Du Lac's 2013 monitoring schedule.

If you have any questions, feel free to contact me at the number listed below, at prysbym@michigan.gov, or Department of Environmental Quality, Office of Drinking Water and Municipal Assistance, Lansing District Office, 525 West Allegan Street, 4th Floor North, P.O. Box 30242, Lansing, Michigan 48909-7742.

Dear Mr. Carter:

SUBJECT: Water System, Chateau Du Lac Condominium

This letter confirms my visit on October 21, 2011, with Mr. Robert Stucker, your operator-in-charge (OIC). The purpose of the visit was to conduct routine water system surveillance at Chateau Du Lac condominiums. We are somewhat disappointed in the lack of progress made towards correcting the water related concerns that were noted in the Chateau Du Lac 2009 Water System Review. These concerns are discussed in more detail below.

1. Chateau Du Lac's most recent water system general plan is clearly outdated and the plan has not been updated as we requested. As we discussed, an "as-built" copy of the general plan needs to be obtained and may be available from the consultant who designed the water distribution system. An updated water system general plan needs to be prepared and a copy sent to us by no later than January 31, 2012.

2. A water system Emergency Response Plan (ERP) has not been prepared as we requested. The ERP provides an outline to follow in the event of a water related emergency (loss of pressure, contamination, etc.). A template that can be used for preparing the ERP was provided to your OIC. We will review the completed ERP during our next routine site visit.

3. Dehumidification has not been provided as a means to control moisture and limit corrosion within the wellhouse.

4. The raw water meter inside the wellhouse is not functioning and has not been replaced as we requested. The raw water meter needs to be repaired or replaced such that accurate water usage information can be obtained by no later than January 31, 2012.

5. Chateau Du Lac's lead action level was exceeded during routine lead and copper monitoring in 2011. Two consecutive six-month rounds of lead and copper monitoring will be required, along with water quality parameter monitoring and public education. Specific monitoring & reporting details will be covered in a separate letter. Finally, the 2011 exceedance represents the 4th exceedance in the lead and copper action level since the start of the lead and copper monitoring program. We will be reviewing the history of Chateau Du Lac's lead and copper monitoring program to determine whether a corrosion control study needs to be conducted and/or treatment needs to be provided.

Finally, according to our records, routine pump and motor maintenance for Well #2 has not been performed within the last 12 years. As we discussed, Type-I wells (pump & motor) should be scheduled for routine maintenance once every 5 to 10 years. This type of preventative maintenance is an accepted standard that is practiced in the waterworks industry and is essential in minimizing the chance of an unexpected failure of the well pump/motor and the potential for a loss of water service. Routine pump and motor maintenance should be performed for Well #2 during 2012

We look forward to working with you on these and on any other water related matters. Should you require further information, please contact me at the telephone number below; via e-mail at prysbym@michigan.gov; or Department of Environmental Quality P.O. Box 30242, Lansing, Michigan 48909.

Sincerely,

Michael Prysby

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Water System, Chateau Du Lac Condominium

This letter confirms my visit on November 6, 2008 with your contract operator, Robert Stucker. The purpose of the visit was to conduct routine water system surveillance. Specific water system concerns that need attention are discussed below in more detail.

1. Our most recent copy of Chateau Du Lac's water system general plan was prepared in 1984, and the plan is clearly outdated. An updated water system general plan was not available at the time of the site visit. Also, it does not appear that an updated plan was prepared as we requested in our previous visits and correspondence (copy of our January 8, 2007 letter enclosed).

   An updated water system general plan needs to be prepared and a copy of the plan sent to our office by no later that January 31, 2009. As we discussed, the updated general plan needs to show the location and size of all watermains, hydrants, valves, service lines, etc. The plan should also show the location of the wells, discharge piping, wellhouse, and storage facilities.

2. Chateau Du Lac's bacteriological sample site plan was updated as we requested. As we discussed, a third repeat sampling location needs to be added to the plan since one distribution system sample is collected each month. The updated sample site plan is approved with the condition that a third repeat sampling location is added to the plan.

3. Our inspection of the wellhouse (west half of the clubhouse basement) revealed that this area is being used to store much of the swimming pool equipment. These items make it cumbersome to perform routine wellhouse activities.

   The purpose of a Type-I wellhouse is to allow for flexibility of operation of the water system. The west half of the basement is dedicated for the wellhouse piping and appurtenances and is not intended to be used as a storage area for typical outdoor maintenance equipment including pool supplies and parts. This area must also be accessible only to the water system operator. These miscellaneous items need to be stored in an area that is separate from the wellhouse piping and appurtenances.

4. The lead action level was exceeded during routine lead and copper monitoring in 2008. Exceedence of the lead action level will require Chateau Du Lac to perform water quality parameter monitoring and to revert to full-scale monitoring for at least two consecutive six-month rounds in 2009. Also, public education information will need to be provided to your customers. More detailed information regarding this exceedence and subsequent action that will be required will be provided to you in a separate letter.

If you have any questions, please call me at the number provided below.

Sincerely,

Michael F. Prysby P.E., District Engineer
Field Operations Section

From: Adam Rosenthal
To: Mike Prysby; Robert Stucker
Date: 9/16/2008 2:15:41 PM
Subject: Re: Chateaux Du Lac lead and copper report form

Hi Bob, I just saw the results - 115 ppb for lead is a bit high, any major issue, outside hose bib, basement slop sink, vacant home, etc? Since this is an annual round of monitoring which ends 9/30/08, there is still time to collect more samples and possibly bump this one out - I would suggest a minimum of 5 more samples. Since compliance is based on the 90th percentile, the 9th highest sample would count, 20 samples total would be the 18th highest for the 90th, and so on. Otherwise we're back to water quality parameters and lead public notice. Let me know if you have any questions.

LEAD AND COPPER REPORT AND CONSUMER NOTICE OF LEAD RESULT CERTIFICATE FOR COMMUNITY WATER SUPPLY

Issued under authority of 1976 PA 399 and Administrative Rules, as amended.
Failure to submit this information is a violation of the Act and may subject the water supply to enforcement penalties.

Administrative Rule R 325.10710d requires water supplies to report lead and copper monitoring information within 10 days after the end of the monitoring period. This form may be used to meet this requirement. Submit the information to the appropriate Department of Environmental Quality (DEQ) district office. For district office addresses, visit www.michigan.gov/deq and click on Contacts.

1. Water Supply Name: Chateaux Du Lac
2. County: Genesee 3. WSSN: **1353**
4. Population: 50 5. Monitoring Period: From: 7-1-13 To: 12-31-13
6. Minimum # of Samples Required: 5 7. # of Samples Taken: 18 22
8. Name of Certified Laboratory: State of Michigan MI00003

9. SAMPLE CRITERIA:

Yes	No	Explain No responses in Comments block.	
☐	☒	a. Are the same sampling points used as in the previous monitoring period?	
☐	☒	b. Are all samples from Tier 1 sites?	For more information see *Instructions* paragraph 11, subparagraph "Sample Category."
☐	☒	c. Are all samples from Tier 1, 2, or 3 sites giving Tier 1 priority?	
☒	☐	d. If no Tier 1, 2, or 3 sites are available, do all sites have plumbing materials commonly found at other locations in the system?	
☐	☐	e. Is the minimum number of lead service line samples taken (when applicable)?	
Comments: Original 5 sample sites plus extra samples due to testing all lots for lead and copper

Subject: Chateau Du Lac Condominiums WSSN 01353
Lead and Copper Monitoring - Action Level (AL) Exceedance

The Chateau Du Lac Condominiums exceeded the AL(s) for lead during the most recent round of lead and copper monitoring of drinking water taps from June 1 to September 30, 2011, as summarized below.

Contaminant	AL	90% of samples at or below this level	Number of samples above the AL
Lead	15 parts per billion (ppb)	26 ppb	1
Copper	1.3 parts per million (ppm)	0.085 ppm	0

An AL exceedance is not a violation, but triggers other requirements under the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. Requirements include water quality parameter (WQP) monitoring, source water monitoring, corrosion control treatment, and public education.

Deliver Customer Notice of Lead Result

Recent changes to the Lead and Copper Rule require you to provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected, within 30 days of learning of results. You must also send us a certification that you met all the delivery requirements along with a sample copy of your customer notice. These items were received October 26, 2011.

Distribute Public Education (PE)

A certificate that the PE materials were distributed to all consumers was received. Repeat each year until the lead AL is no longer exceeded. This material is intended to educate consumers about lead health effects, sources, and steps to minimize exposure. Note that the PE material must include information about the exceedance in your water supply, information about what you are doing to reduce lead levels, information about lead service lines in your distribution system, and information about the history of lead levels in your water supply.

Conduct WQP Monitoring
Water Quality Parameter monitoring was completed December 2011, in which two WQP samples were collected 24 hours apart from the entry point to the distribution system and two samples 24 hours apart from 57 Chateau Du Lac Drive in the distribution system. The WQP samples were analyzed for pH, alkalinity, calcium, conductivity, and temperature. Continue sampling for WQP during each lead and copper monitoring period until at least 90% of lead and copper tap results meet both ALs.

To order bottles, call the Department of Environmental Quality (DEQ) laboratory at 517-335-8184, or download the form EQP 2301 *Requisition for Water Sample Units* from http://michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining the Necessary Sampling Units, and test list. The tests are analyzed from one sample bottle per location. Request the analyses using the following test codes:

Test Code	Cost (as of 06/15/2007)	Bottle Number	Test Description
CORR	$51.00	33	Conductivity, Alkalinity, Phosphate, and Calcium
CPH	$13.00	33	pH Determination

Conduct Source Water Monitoring
Source water monitoring was conducted in December 2011. Repeat every third year until both lead and copper ALs are met during the entire three year period.

Correct the Problem
Minimize lead and copper in drinking water by reducing corrosion of water pipes and household plumbing that contain lead and copper. To accomplish this, you must propose a corrosion control treatment plan or propose to perform a corrosion control study by July 31, 2012. If treatment is found to be necessary, it must be installed and samples collected to ensure the lead and copper ALs are consistently met. Contact us for guidance on corrosion control options.

Lead and Copper Monitoring
You are not required to conduct lead and copper tap monitoring until after you install corrosion control treatment. However, at your option, you may conduct additional rounds of monitoring. If the action levels are met during future rounds of monitoring, you may discontinue the corrosion control study and installation of treatment. If the lead action level is met in two consecutive six month monitoring periods, you may discontinue your public education activities. It is recommended that you collect another round of lead and copper tap samples during the January 1-June 30, 2012, monitoring period. Select the same sites used in previous monitoring periods, giving Tier 1 sites first priority. Within 30 days of learning of results, provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected. All monitoring, reporting, customer notification and DEQ certification requirements remain in effect.

Consumer Confidence Report (CCR)
Include this AL exceedance in your CCR, which is due to our office, your customers, and the local health department, by July 1, 2012. Also include the following statement in the CCR, regardless of the lead and copper levels:

> *If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Chateau Du Lac Condominiums is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at http://water.epa.gov/drink/info/lead.*

What's Next?
If you can show that both lead and copper ALs are met in two consecutive six month periods, then many of the requirements outlined in this letter will no longer apply. However, in the meantime, you must propose a corrosion control treatment plan or propose to perform a corrosion control study. If treatment is found to be necessary, it must be installed. We will work with you to complete these corrosion control steps to optimize your corrosion control treatment.

Timetable of Requirements

Complete By	Requirement	Comments
Right away	Deliver *Customer Notice Of Lead Result* to persons served at each site tested within 30 days of knowing the result.	Download *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Word or PDF format from http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms.
November 30, 2011	Collect WQP samples.	Collect 2 samples at least 24 hours apart from each entry point to the distribution system. Collect 2 samples at least 24 hours apart from the distribution system. Repeat each lead and copper monitoring period until both ALs are met.
November 30, 2011	Perform PE activities including delivering PE materials to all consumers.	PE required activities are listed in enclosed template and checklist. Repeat every year until the lead AL is met in the most recent round of sampling.
December 10, 2011	Send us certification of PE compliance along with a sample copy of the materials delivered.	Sample certification enclosed. Required whenever PE required.
December 31, 2011	Send us certification of customer notice of lead result compliance along with a sample copy of the notice delivered.	Download *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Word or PDF format from http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms.
March 31, 2012	Collect one lead and copper sample from each entry point to the distribution system.	Repeat every third year until both ALs are met for the whole 3 year period.

Complete By	Requirement	Comments
July 31, 2012	Submit a proposal for optimal corrosion control treatment or a corrosion control study.	Contact us for guidance on corrosion control options. Corrosion control study and treatment installation may cease if both ALs are met during 2 consecutive 6 month monitoring periods.
Between January 1 and June 30, 2012	Collect 10 samples from the distribution system and have them analyzed for lead and copper.	Report the results to the DEQ and deliver the customer notice of individual lead results using the downloadable *Lead and Copper Report and Consumer Notice of Lead Result Certificate*.
July 1, 2012	Report the 2011 AL exceedance in the Consumer Confidence Report.	Specific lead health effects language must be included.

We recognize that the Lead and Copper Rule is complex and may be confusing. We will continue to offer assistance in implementing these regulations.

Mr. Larry Carter
Piper Realty Company
5454 Gateway Blvd
Flint, Michigan 48507

Dear Mr. Carter:

Subject: Chateaux Du Lac Condominiums; WSSN: 01353
Lead and Copper Monitoring of Drinking Water Taps

We received your report for the monitoring period June 1, 2010, through September 30, 2010.

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	# of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 parts per billion (ppb)	14 ppb	1	5	6/1 and 9/30/2011 Submit results to this office by October 10, 2011
Copper 1.3 parts per million (ppm)	0.080 ppm	0		

Ninety percent of the sites you tested are within action levels under the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. These results must be reported on your 2010 Consumer Confidence Report (CCR) due to our office, your customers and the local health department by July 1, 2011. Also include the following statement in the CCR, regardless of the lead and copper levels:

> *If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Chateaux Du Lac Condominiums is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.*

You must also provide individual lead tap results to the people who receive water from sites that were sampled, even if lead was not detected. This is a new requirement under United States Environmental Protection Agency revisions to the Lead and Copper Rule of October 10, 2007.

The new rule requires you to deliver notices of lead results to customers within 30 days of learning of each individual result and to deliver a certification that delivery requirements were met along with a sample copy of your customer notice to this office within 3 months of the end of the monitoring period. A template and certificate is downloadable in Microsoft Word and PDF formats from www.michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, Reporting Forms, and *Lead and Copper Report and Consumer Notice of Lead Result Certificate*.

Samples due the next monitoring period mark your second annual round of monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria. We strongly encourage you to sample early in the monitoring period.

Bottles will NOT be mailed automatically. To order bottles, call the Department of Environmental Quality laboratory at 517-335-8184 or download the form EQP 2301 *Requisition for Water Sample Units* from www.michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining the Necessary Sampling Units, and test list.

Sincerely,

Adam Rosenthal, EQA

PUBLIC SERVICE ANNOUNCEMENT

Recent tests of distribution system tap water show that some homes in Chateaux Du Lac, exceed the federal government's limit for lead. Therefore, the Chateaux Du Lac Water System has begun a program to reduce lead in drinking water. Since much of the lead contamination of drinking water comes from individual home plumbing systems, there is action you can take in your home.

Please call your water utility operator in charge at 517-548-7363 for information on how to reduce exposure to lead in drinking water and how to have your home's water tested for lead.

Your lead and copper test results for 23 Chateaux Du Lac Dr are:

Copper	150 ppb	Maximum Contaminant Level is 1,300 ppb
Lead	115 ppb	Maximum Contaminant Level is 15 ppb

Thank you

Robert H. Stucker
Operator in Charge
In-House Water Lab

JENNIFER M. GRANHOLM
GOVERNOR

STEVEN E. CHESTER
DIRECTOR

June 2, 2009

Mr. Larry Carter
Piper Realty Company
5454 Gateway Blvd
Flint, MI 48507

WSSN: 01353
Chateaux Du Lac Condominiums

Dear Mr. Carter:

SUBJECT: Lead and Copper Action Level Exceeded for Chateaux Du Lac Condominiums

The United States Environmental Protection Agency (USEPA) has established action levels of 15 parts per billion (ppb) for lead and 1300 ppb for copper. Chateaux Du Lac Condominiums has exceeded the action level for lead during the monitoring period from June 1, 2008 to September 30, 2008. Lead and copper sampling was conducted on September 2, 2008. The results are outlined in the table below:

Samples: 5 required / 5 collected, for the Monitoring Period of: June 1, 2008 – September 30, 2008

Results:	Lead		Copper	
Action levels	15	ppb	1300	ppb
90th percentile	**59**	**ppb**	**75**	**ppb**
Average	24	ppb	30	ppb
Maximum	115	ppb	150	ppb
Minimum	0	ppb	0	ppb
Action Level Exceeded	**1**	**Sites**	**0**	**Sites**

The Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the Administrative Rules promulgated there under (Act 399) requires the following steps to be taken in response to the lead exceedance:

Distribute Public Education Notice / Public Service Announcement

Rule 325.10410 (1) of Act 399 requires that public education with specific educational language on the health effects of lead, must be mailed or delivered to all residents of Chateaux Du Lac Condominiums within 60 days of the exceedance. **Therefore, Chateaux Du Lac Condominiums was required to deliver the public education to every customer no later than November 2, 2008.**

Our records show that the Public Education Notice/Public Service Announcement was completed as required and the Certificate of Distribution was received December 12, 2008. As a reminder, this information must be redistributed by June 30, 2009. Please submit the Certificate of Distribution to this office by July 10, 2009

Enclosed is mandatory language for a Public Service Announcement / Public Education Notice with information regarding the health effects of lead. Also, enclosed is a Certificate of Distribution. Please indicate the method of delivery, sign, and date the Certificate of Distribution (retain a copy for your records) and return a copy as noted above.

The Public Service Announcement / Public Education Notice must be repeated every 6 months, as long as action levels are still being exceeded. Please note that new customers must receive a copy of the public education when water service is established.

Report the Lead and Copper Exceedances in the 2008 Consumer Confidence Report (CCR)

In addition to distributing the public education notice described above, the exceedance for lead must be included in the Water Quality Data section of your 2008 CCR which is due to our office, your customers, and the local health department by July 1, 2009.

You must include the following informational statement regarding lead:
"Infants and young children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing. If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water. Additional information is available from the Safe Drinking Water Hotline at 800-426-4791."

Conduct Water Quality Parameter (WQP) Monitoring

Sampling for several water quality parameters (WQP) is required every six months. This includes two samples (collected at least 24 hours apart) from the point of entry to the distribution system after treatment, and two samples (collected at least 24 hours apart) from one location in the distribution system. This location must be representative of water quality throughout the distribution system.

WQP samples were collected on November 29, 2008 and November 30, 2008 in response to the Lead exceedance as discussed with your contract operator, Mr. Robert Stucker. **The next set of WQP samples must be collected by June 30, 2009.**

WQP monitoring includes measurements for pH, alkalinity, calcium, conductivity, and temperature. The pH and temperature must be measured at the time of sample collection for the most accurate results. However, you may have the pH measured at a nearby laboratory or the State lab. To order bottles from the State lab, call 517-335-8184. If using the State lab in Lansing, use the following test codes for requesting the required sampling:

Test Code	Cost (as of 1/1/05)	Bottle Number	Test Description
CORR	$51.00	33	Conductivity, Alkalinity, Phosphate, and Calcium
CPH	$13.00	33	pH Determination

The above tests are analyzed from one sample (or from one bottle, number 33).

The results of Lead and Copper monitoring, and WQP monitoring, are to be reported on the attached reporting form.

Conduct Source Water Monitoring

The requirement for sampling lead and copper in the source water was also completed on November 29, 2008 and November 30, 2008 in response to the Lead exceedance.

Correct the Problem

The presence of lead and/or copper is an indicator of corrosive water. If two consecutive six month rounds of sampling results are below the action levels for both lead and copper, your system will be considered to have optimized corrosion control and not be required to take the steps below. However, Act 399 requires that when a water system exceeds either the lead or copper action level, an optimal corrosion control program must be developed to correct the problem.

In response to the previous lead exceedance noted in a letter dated April 26, 2005, Chateaux Du Lac Condominiums sampled into compliance, however the 1st annual round of monitoring exceeded the action level for lead. Therefore, based on the 2005 and 2008 exceedances, an optimal corrosion control program must be developed under one of the options below.

A.) Make a proposal to this office by September 30, 2009 for an optimal corrosion control treatment program. By December 31, 2009 we will either approve the plan, require you to do a study, or designate some other corrosion control plan. If we require a study, it must be completed within 18 months after we request it.

B.) You can propose that you do a study to determine the best method of optimal corrosion control for your system. The proposal to do a study must be made by September 30, 2008. Once the proposal is accepted by this office, you will then have one year to complete the study and recommend a treatment option to us.

Once a treatment plan has been approved by our office, you will have one year to install the treatment equipment and an additional year to collect follow-up samples. Using that data, our office will designate optimal water quality control parameters under which your system must operate. At that time, you will continue with regular lead and copper sampling.

Please note that although continued lead and copper sampling is not required by Act 399 until after corrosion control treatment has been installed, we recommend that you continue to sample every six months in conjunction with your WQP monitoring. With proper sampling techniques and site selection, Chateaux Du Lac Condominiums may find that lead and copper levels will be below action levels in the future. Remember that if Chateaux Du Lac Condominiums can show that lead and copper levels are below the action levels during two consecutive six month monitoring periods, then many of the requirements outlined in the this letter will no longer be applicable. If Chateaux Du Lac Condominiums plans to continue lead and copper sampling, the next round of five samples must be collected by June 30, 2009.

Following is a table which outlines your requirements for the next year.

Time Period	Requirement	Comments
By June 30, 2009	Issue Public Service Announcement and Public Education Notices	Notices must be mailed/delivered to every customer
By July 10, 2009	Forward a signed copy of the Public Education Notice and Certificate of Distribution to this office	
By June 30, 2009	Collect Water Quality Parameter (WQP) samples	Collect 2 samples (collected 24 hours apart) from the point of entry to the distribution system. And collect 2 samples (collected 24 hours apart) from one location in the distribution system.
By July 1, 2009	Report the lead exceedance in the 2008 Consumer Confidence Report	
By September 30, 2009	A.) Propose an Optimal Corrosion Control Program or B.) Propose to do a study to determine the best method of corrosion control	
Every 6 Months	Collect Water Quality Parameter (WQP) samples	Collect 2 samples (collected 24 hours apart) from the point of entry to the distribution system. And collect 2 samples (collected 24 hours apart) from one location in the distribution system.
Every 6 Months	Public Service Announcement	The Public Service Announcement must be repeated every 6 months.
Every 6 Months	Forward a signed copy of the Public Education Notice to this office	Signed copies of the public education notice are due to our office 10 days after you deliver the annual notices

We recognize that the Lead and Copper Rule is complex and may be confusing. We propose a conference call with you and your operator before the end of June 2009 to discuss further. We will continue to offer assistance in implementing these regulations.

If you have any questions, call us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

Dear Mr. Carter:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **January 1, 2007 through June 30, 2007**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	15 ppb	1	5	**June 1 and September 30, 2008** Submit results and reporting form by October 10, 2008
Copper 1.3 ppm	0.14 ppm	0		

ppm = parts per million ppb = parts per billion

Your results are less than the action levels stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended. If your 90th Percentile is greater than zero and/or you have one or more samples Above the Action Level, these results must be reported on your *2007 Consumer Confidence Report* due by July 1, 2008.

Samples due during the next period mark your first round of annual monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria.

Enclosed are report and bottle ordering forms for your next round of monitoring. Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

FOR Michael F. Prysby, P.E., District Engineer

Dear Mr. Stucker:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **January 1, 2005 through June 30, 2005**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	12 ppb	1	5	**6/1 and 12/31/2005** Submit results and reporting form by January 10, 2006
Copper 1.3 ppm	0.13 ppm	0		

ppm = parts per million ppb = parts per billion

Your results are less than the action levels stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended. If your 90th Percentile is greater than zero and/or you have one or more samples Above the Action Level, these results must be reported on your *2005 Consumer Confidence Report* due by July 1, 2006.

Samples due during the next period mark your second 6 month round of monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria.

Enclosed are report and bottle ordering forms for your next round of monitoring. Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

Mr. Robert Stucker
In-House Water Lab
210 North Center Street
Howell, MI 48843

WSSN: 01353
Chateaux Du Lac Condominiums

Dear Mr. Stucker:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **June 1, 2004 through September 30, 2004**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	20 ppb	1	**5**	**1/1 and 6/30/2005** Submit results and reporting form by July 10, 2005
Copper 1.3 ppm	0.035 ppm	0		
Raw Water Monitoring (one sample from each well)			**2**	**Same as above**
Water Quality Parameters - 2 sets (only required if an AL is exceeded)			**4 (2 distribution and 2 POE)**	**Same as above**

ppm = parts per million ppb = parts per billion

Your results for lead is greater than the action level stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended. Since your 90th Percentile for lead is above the Action Level, these results must be reported on your *2004 Consumer Confidence Report* due by July 1, 2005.

The federal Lead and Copper Rule requires that water quality parameter (WQP's) samples must be collected when the action level is exceeded. Two sets of WQP's were collected from the distribution system and the well house as required on January 17th and 18th, 2005. The WQP samples should have been collected within the same monitoring period as the lead/copper samples, however Chateau Du-Lac was not notified until after the monitoring period ended, thus there will be no penalty assessed for the system.

You will have to collect a lead and copper sample from each well along with the distribution monitoring this sampling period.

Public Education material must be distributed to all residents of the facility within 60 days of the date of this letter. A sample public education brochure with the mandatory language was

E-mailed and is enclosed for your use. This public education material must be distributed to your residents every 12 months, as long as the lead action level is exceeded. Also enclosed is a copy of an affidavit to be included in your federal tracking file at this office. Please indicate method of delivery, sign, and date the form (retain a copy for your records) and return a copy to this office.

We encourage you to continue attempting to sample back into compliance. Compliance is achieved after 2 *consecutive* full rounds are below the action levels. The next round of sampling is between January 1 and June 30, 2005. You will have to collect 5 samples and have them analyzed for lead and copper during that time frame.

Enclosed are report and bottle ordering forms for your next round of monitoring. Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

From: Adam Rosenthal
To: Bob Stucker
Date: 1/12/2005 2:59PM
Subject: Chateau Du Lac

Hello Bob, I finally had a chance to write some lead/copper result letters and realized that Chateau Du Lac exceeded the Action Level for Lead. The 90th percentile calculated to be 20 ppb and the AL is 15 ppb. I do not recall whether we spoke about this situation before or not, at any rate I need to find out if you tested for any water quality parameters, and if so please send me copies. These parameters should have been tested in the same monitoring period as the original samples were collected.

If samples were not collected, please perform the following ASAP.

Collect Water Quality Parameters, (WQPs) in the distribution system, at the Point of Entry, (POE) and distribute Public Education about Lead.

You will need to order 4 unit 33 bottles, then collect 2 samples from your POE collected 24hrs apart, and 2 samples in the distribution system collected 24hrs apart. These samples will be tested for pH, alkalinity, calcium, conductivity, orthophosphate, and temperature. Temp is taken at the time of the sample, and if you have meters for any other parameters you can test those yourself also.

Enclosed is our lead/copper reporting form with instructions and the public education you will need. Please fill out the WQP page and send a copy to us when you get your results.

Let Mike or me know if you have any questions,

Adam Rosenthal, EQA

WSSN: 01353

Dear Mr.Yarbrough:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **June 1, 2002 through September 30, 2002**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	5.0 ppb	0	5	**6/1 and 9/30/2004** Submit results by October 10, 2004
Copper 1.3 ppm	0.055 ppm	0		

ppm = parts per million ppb = parts per billion

Your results are within the action levels stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended, and the rules promulgated there under. If your 90th percentile is greater than zero and/or you have one or more samples Above the Action Level, these results must be reported on your *2002 Consumer Confidence Report* due by July 1, 2003.

Samples due during the next period continue your **triennial** monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria.

Enclosed are report forms and bottle ordering forms (bottles will NOT be mailed automatically). Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

LEAD AND COPPER MONITORING
for compliance with U.S. EPA lead and copper regulations

We have received your report for the June 1, 1997, to September 30, 1997, monitoring period.

RESULTS:

90th percentile for lead:	8.5	ppb
90th percentile for copper:	90.0	ppb

These results do not exceed the action levels of 15 ppb for lead or 1300 ppb for copper.

We have received your report for the June 1, 1998, to September 30, 1998, monitoring period.

RESULTS:

90th percentile for lead:	0.0	ppb
90th percentile for copper:	75.0	ppb

These results do not exceed the action levels of 15 ppb for lead or 1300 ppb for copper.

NEXT MONITORING PERIOD: October 1, 1998 to September 30, 2001

Samples required: Lead/Copper Monitoring: 5 distribution sites sampled analyzed for lead and copper.

Comments: Samples must be collected during June, July, August, or September of the same calendar year. Samples due by 2001 mark your first round of reduced triennial monitoring.

Enclosed are report forms and bottle ordering forms (bottles will NOT be mailed automatically). Please sample early to avoid last minute problems. If you should have any questions, please feel free to contact William Smith.

Subject: Lead/Copper Monitoring
Chatuau-Du-Lac Condominiums

Dear Ms. Cummings:

This letter is a reminder of your monitoring requirements for the Lead & Copper Regulation for the fourth monitoring period (1/01/95-6/30/95). As we discussed during our September 15, 1994 meeting and in our September 26, 1994 letter, a second series of "Water Quality Parameter" (WQP) sampling must be conducted. This will consist of collecting samples twice from one distribution system location and twice from your point-of-entry location (clubhouse basement) prior to June 30, 1995. The specific WQP samples were discussed in our previous letter.

Next, we have not heard from you or the condominium association as to which direction this supply will proceed towards achieving optimal corrosion control. The owner of this supply, however, is responsible for achieving optimal corrosion control. To be in compliance with this regulation, our department must be informed as to what course of action will be taken towards completing this objective. Several alternatives were discussed in our previous letter.

Finally, the results of your third round samples showed that both action levels were not exceeded. Thus, you will be eligible to forgo the public education program and the corrosion control study if a second acceptable round can be obtained. If either action level is exceeded, steps towards optimal corrosion control must continue as detailed in our previous letter.

Specifically, you will need to collect five samples for lead and copper from your participating residents. This sampling round must be completed by June 30, 1995.

PRINTED ON RECYCLED PAPER

Arrangements have been made for the lead and copper sampling units to be sent to you. You should receive these bottles in several weeks.

If you have any questions about this regulation, please call me immediately at (517) 335-8605.

Sincerely,

Michael Prysby

P.O. Box 30195
Lansing, MI 48908

Dear Mr. Presby,

I am writing on behalf of the Chateaux Du Lac Condominium Association, in reference to the corrosion control study that you and I discussed at our meeting of September 15, 1994. At this date in 1994, it is difficult to make any binding statements reference what a future management company and or condominium Association Board of Directors will do in the future regarding a possible study. The study, as I understand it from our September meeting would be necessary for the Association to initiate based upon the results of our water quality parameter tests that are currently being taken and the last round of lead and copper samples obtained from Mr. Bill Freas.

My assumption is that the Board of Directors will be cooperative regarding restrictions that may be placed on them by the EPA, but I am not in a position currently to make any binding statements for a Board that may or may not be in office in 1996.

To date we have provided cooperative efforts in the sampling as we have been required, and at the point we are notified of our need to conduct a study I will certainly provide that information to the Board of Directors.

Thank you for your on-going diligence in this matter, and we will wait to hear from you regarding the latest sampling.

Sincerely,

Kay Cummings Bushey
Cummings Property Management

VERNICE DAVIS ANTHONY, MPH, Director

September 26, 1994

Mrs. Kay Cummings
Chateau Du Lac Condominiums
c/o Cummings Management Company
1119 Ranfield Lane
Flint, Michigan 48532

WSSN: 1353

Dear Mrs. Cummings:

This letter confirms my visit on September 15, 1994, with you and Bill Freas. The purpose of the visit was to discuss Chateau Du Lac's second round of lead and copper monitoring.

Specifically, the calculated 90th percentile for Chateau Du Lac was 49.0 parts per billion (ppb) for lead and 105.2 ppb for copper. Although your supply met the copper action level of 1300 ppb, the 15 ppb action level for lead was exceeded.

Since your supply exceeded the lead action level, "Water Quality Parameter" (WQP) monitoring needs to be conducted. The first round of WQP monitoring will need to be completed prior to December 31, 1994. WQP monitoring shall consist of collecting samples twice from one distribution system location and twice from your point-of-entry location (clubhouse basement) during each six month monitoring period. Each set of WQP samples must be done on separate dates.

WQP monitoring shall include measurements for pH, temperature, calcium, alkalinity, and conductivity. In addition, an analysis for orthophosphate and silica must be conducted if these are utilized as part of your current treatment technique. pH and temperature must be measured at the time of sample collection for the most accurate result. pH may be measured at a nearby laboratory provided that the temperature of the sample can be held constant and the analysis can be completed within 30 minutes of sample collection. WQP monitoring shall be repeated in the next six month monitoring period (January 1, 1995 - June 30, 1995). Finally, one sample for a lead and copper analysis will need to be collected from each well prior to December 31, 1994. The appropriate sampling containers were sent to you several days prior to this letter, please call me if you do not receive them.

Next, the supplier of water must provide public education materials to each customer. A sample public education brochure with the mandatory language that must be mailed to each water user was sent to you prior to our meeting. This brochure was then distributed to each resident prior to the September 10, 1994, or 60 day deadline following the end of the round in which the lead action level was exceeded. This public education brochure must be mailed to your water users every 12 months as long as the lead action level is exceeded.

Next, enclosed is a timeline that outlines future responsibilities under this regulation. Specifically, this supply will be required to evaluate and identify "optimal corrosion control treatment" (OCCT). We would recommend that you retain a consultant who specializes in corrosion control for assistance. You may also choose to repeat the lead and copper monitoring in the next period (July 1 -December 31, 1994) to see if the results confirm the need to pursue OCCT. If, however, two consecutive six month monitoring periods comply with the action levels for lead and copper, you may forego installing any treatment. However, you may not delay the implementation of treatment beyond the times that are indicated on the schedule if subsequent monitoring confirms the corrosivity of the water. In addition, the two rounds of WQP monitoring are still required if you choose to repeat the lead and copper monitoring in the subsequent monitoring periods. Any subsequent monitoring shall include both lead and copper.

Next, the regulation will require you to make a recommendation to us as to your course of action towards achieving optimal corrosion control. Several alternatives are discussed below:

1. Recommend to our department by December 31, 1994, as to what corrosion control treatment plan you intend to follow. Our department will either approve the plan, will require you to do a study, or designate some other type of corrosion control.

2. You can indicate to us by December 31, 1994, that you intend to conduct a corrosion control study. Our department can then accept the proposal and you then have until December 31, 1996, to complete the study and make a recommendation to us for corrosion control.

3. You may also choose to begin treatment prior to actually completing a study or making a proposal for OCCT. This treatment would likely be a trial and error method but should utilize the facts obtained from your WQP monitoring, available equipment and chemical manufacturers, and the assistance from your consultant. As always, a construction permit is required prior to making any additions or changes in your treatment process. Also, any chemical that is used must be approved for use under ANSI/NSF Standard 60.

The lead and copper regulation is extremely complex and confusing. Hopefully, this letter provides you with some guidance. We look forward to assisting you further in meeting the requirements of this regulation. If you have any additional questions regarding this or any other water related matter, feel free to call me at (517) 335-8605.

Very truly yours,

Michael Prysby

There is no other civil action between these parties arising out of the same transaction or occurrence as alleged in this complaint pending in this court, nor has any such action been previously filed and dismissed or transferred after having been assigned to a judge. I do not know of any other civil action, not between these parties, arising out of the same transaction or occurrence as alleged in this complaint that is either pending or was previously filed and dismissed, transferred, or otherwise disposed of after having been assigned to a judge in this court.

COMPLAINT FOR INJUNCTIVE RELIEF, DECLARATORY RELIEF AND VIOLATION OF PLAINTIFFS FOURTEENTH AMENDMENT RIGHT TO DUE PROCESS

NOW COMES Plaintiffs, COALITION FOR CLEAN WATER, by and through their attorney, Trachelle C. Young, & Assoc., P.L.L.C., by attorney Trachelle C. Young, and for their Complaint, states as follows:

Parties, Jurisdiction and Venue

1. Plaintiffs, Coalition for Clean Water (Coalition), is a Michigan nonprofit organization, based in Genesee county, Michigan and organized for the purpose of

promoting and ensuring safe, contaminate free drinking water through education, social actions and legal actions designed to eliminate unlawful and illegal actions by all governmental officials, representatives and entities at all levels of government. Coalition for Clean Water is comprised of multiple civic groups, including but not limited to, Concerned Pastors for Social Action, Water You Fighting For, Democracy Defense League Water Task Force, Flint Water Class Action Group, Dr. Laura Sullivan, Phd, 1st Ward City Councilman Eric Mays.

2. Defendant, City of Flint (hereinafter "Flint"), is a city organized under the constitution and laws of the State of Michigan and is a political subdivision of the State of Michigan.
3. Defendant, City of Flint Administrator Natasha Henderson, (hereinafter "City Administrator"), is the City's Chief Administrative Officer operating under expanded powers that give her ultimate day to day control over the City.
4. This matter concerns the City's failure to pass the Environmental Protection Agency's (EPA) locational running annual average (LRAA) of the most recent four quarters water quality tests, thereby subjecting the citizens of Flint to unhealthy, contaminated drinking water.
5. Venue and jurisdiction are proper in this Court because plaintiffs seeks declaratory and injunctive relief to cease the City of Flint's current methods, acts, and/or practices of utilizing the Flint River as the primary source for drinking water as unlawful due to the proven deleterious health effects on the residents of the City and to require the City to return to using water from the Detroit system, at least

temporarily, before the offer from the Detroit Water and Sewerage System Department (DWSD) expires.

6. Jurisdiction is also proper pursuant to Title XIV of the Public Health Service Act a/k/a The Safe Drinking Water Act (Act), Section 1449, which allows citizens to bring suit against any person or agency allegedly in violation of provisions of the Act.

General Allegations

7. That the Coalition incorporates by reference allegations 1 through 6 as though fully set forth herein.
8. That the City of Flint had purchased its drinking water from DWSD for the past thirty plus (30+) years under an original thirty (30) year contract executed in 1964, which continued on a year to year basis.
9. That Genesee County purchased its water from the City to get the Lake source water from DWSD.
10. That the City of Flint River has not been used as a primary source for drinking water in fifty (50) years.
11. That the Flint River hadn't been used as a primary source for drinking water due to a number of threats, including but not limited to improperly disposed of chemicals; animal wastes; pesticides; human wastes; wastes injected deep underground; and naturally-occurring substances affecting surface water.
12. That the source of the water purchased from Detroit was Lake Huron.
13. That Lake water has lower levels of total organic carbon than river water.
14. That Lake water requires a different treatment process than River water.

15. That the City of Flint paid approximately 1 million dollars per month to DWSD for its delivery of the water.
16. That in 2010, the City began disclosing its interest in joining the Karegnondi Water Authority (KWA), which sought to build new pipelines from Lake Huron to the County of Genesee and the City of Flint.
17. That the overall cost of building this pipeline is approximately 600 million dollars and it is not estimated to be completed until sometime towards the end of 2016.
18. That on April 26, 2010, the Flint City Council voted to join the KWA.
19. That on October 26, 2010, the KWA Board of Trustees met for the first time with representatives from the incorporating Cities of Flint (**Mayor Dayne Walling**), Lapeer (City Manager Dale Kerbyson), and County Drain Commissioners of Genesee (Jeff Wright), Lapeer (John Cosens) and Sanilac (Gregory L. Alexander). Walling was elected chair.
20. That on April 16, 2013, Flint's Emergency Manager, Ed Kurtz, ended the City's contract with Detroit by signing a contract with the KWA.
21. That in response to Kurt's actions, on April 17, 2013, the DWSD gave the City of Flint a one (1) year notice based on the termination of its contract to supply water to the City of Flint, effective April 17, 2014.
22. That on October 16, 2013, ten additional trustees were added to the board of trustees: former state House Minority Leader Richard Hammel; **Johsua Freeman**, Flint City Council; Larry Green, Mt. Morris Township supervisor; Ted Henry, Genesee County commissioner; Micki Hoffman, Grand Blanc Township supervisor; Steve Landaal, president of Landaal Packaging; Sheldon Neeley, Flint City Council; Thomas Svcek,

Swartz Creek Department of Public Works director; Tracey Tucker, Flint Township building administrator; and Paula Zelenko, mayor of Burton.

23. That on April 25, 2014, the City of Flint began utilizing the Flint River as its primary source of drinking water.

24. That upon switching to the Flint River water, the City of Flint failed the EPA's LRAA water quality tests on May 21, 2014, August 21, 2014 and November 20, 2014.

25. That as a result of these failed tests, the City of Flint was required to send out Violation Notices to all the residents that stated their water system recently violated a drinking water standard and people who have a severely compromised immune sytem, have an infant, or are elderly may be at increased risk and should seek advice about drinking water from their health providers. See *Exhibit A*

26. This required Notice further stated that the violation was based on elevated levels of total trihalomethanes (TTHM), and that people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. See *Exhibit A*

27. That TTHM is an odorless, colorless disinfection byproduct, the fallout of chlorinating water.

28. That in June 2014, Flint emergency manager Darnell Earley finalized the sale of an Eastern Genesee County 9-mile section of water pipeline to Genesee County for $3.9 million.

29. That Genesee County Drain Commissioner Jeff Wright has stated he would allow the City to utilize that 9-mile section of water pipeline if the City goes back to water usage from DSWD.
30. That upon information and belief, that 3.9 million was given directly to the KWA as part of the City's investment in that pipeline.
31. That compliance with EPA standards is calculated using a LRAA of the most recent four (4) quarters.
32. That the City of Flint Mayor admitted the City underestimated the challenges of treating River water.
33. That the City of Flint failed to properly prepare for the transition to River water as a primary drinking source and recklessly endangered the health, safety and welfare of its residents as a result thereof.
34. That in attempting to treat the River water, the City of Flint over chlorinated the water, which directly caused the elevated levels of TTHM.
35. That because the City failed the November 20, 2014 LRAA test, it *cannot* be in compliance with the EPA standards until it passes the February 2015, May 2015, August 2015 and November 2015 tests.
36. That upon information and belief, the City passed the February 2015 tests, was out of compliance at two of the eights sites in March 2015 and passed the May 2015 LRAA tests, but they still required to send out the EPA Violation Notices.
37. That the Notices sent out by the City of Flint appear deceptive and contradicting in that it contains two pages: the first is a colorful, attention grabbing sheet that starts with "**We are pleased to report that the City of Flint water is safe and meets U.S.**

Environmental Protection Agency guidelines..." in bold print (See *Exhibit B*); the second sheet is in black and white and is the actual Violation Notice stating that the City is still out of compliance with the maximum contaminant levels for its drinking water, which is not in bold print and the same health warnings and cautions apply. See *Exhibit C*

38. That due to a major community concern, all of the local major grocery stores lowered the cost of bottled water, there have been and continue to be community giveaways of bottled water for low income residents that can't afford to purchase their water, the Flint hospitals began using and offering bottled water, the Department of Human Service's Bureau of Child and Adult Licensing recommended to the Genesee Intermediate School District, which runs a Head Start program in Flint, to use bottled water and said children have since been given bottled, The Flint Children's Museum has stopped the flow of Flint water at its fountains and the list goes on.
39. That there were three boil water advisories in a 22-day span in the summer of 2014 after positive tests for total coliform and fecal coliform bacteria in the Flint River.
40. That in October 2013, General Motors (GM) shut off its usage of Flint River water at its Flint Engine Operations on West Bristol Road because the water was causing corrosion of its engines and the agreement states GM is not required to return to the usage with the City of Flint until it is back to using water from Lake Huron through the KWA.
41. That members of the Coalition, including those with severely compromised immune systems, infants and elderly, have suffered severe health problems that have been

directly connected to the unhealthy, contaminated River water, including but not limited to mysterious rashes on local children, unexplained illnesses and sick pets.

42. That many other residents have complained of health issues as a result of lead, odor, discoloration, turbidity, particles and sediments in the system.
43. That in February 2015, several concerned citizens contacted activist Erin Brockovich seeking assistance with the growing major health impacts of the Flint River usage.
44. That Erin Brockovich did send an expert from Integrated Resource Management, Inc., Bob Bowcock – free of charge – to review the operations at the Flint Water Plant and the quality of the water being distributed.
45. That Mr. Bowcock prepared and submitted to Mayor Walling and the Flint City Council a report dated February 17, 2015, which made several recommendations on the source supply evaluation, the Water Treatment Plant, the Distribution System Operations and Budget & Rate Concerns. See *Exhibit D*
46. That the City of Flint then paid a consulting company, Veolia, $40 thousand dollars (at $900/hr) in March 2015 to conduct a short term assessment of the operation of the water plant, distribution system and customer communications programs and make recommendations.
47. That the Veolia report made numerous long term and costly recommendations, including but not limited to operational changes and improvements, changes in water treatment, procedures and chemical dosing, adjustments in how current technologies are being used, increased maintenance and capital spending, increased training and improved customer communications. See *Exhibit E*

48. That the City of Flint's Capital Improvement Plan states the City needs to invest $50 million dollars to improve its water plant, properly train its plant personnel and to replace pipes.

49. That the City has disclosed its plans to date to invest $5 million dollars in the following manner:

    a. $900,000 in water main leak protection;
    b. $1.6 million fro a Granular Activated Carbon (GAC) Filter at the plant meant to treat the River water;
    c. $2.1 million to replace pipes along Dupont Street (@ $1 million per mile);
    d. $400,000 in water treatment improvements.

50. That likewise, drinking water that is not properly treated or disinfected, or which travels through an improperly maintained distribution system, may also pose a health risk.

51. That the City of Flint received a $2 million dollar grant and Emergency Manager Jerry Ambrose was allowed to restructure $2 million dollars in water loan debts that would have gone to the EPA.

52. That as a result, $4 million of the $5 million being invested did not come from the excessive water rates the City of Flint charges.

53. That upon information and belief, the City has collected approximately $30 million dollars from its water rates to its customers since it began using the Flint River as the primary source.

54. That upon information and belief, the City has a net $10 million in the water fund from the excessive water rates.

55. That this initial $5 million investment doesn't begin to touch the major investment needed to bring the City of Flint Plant to the point it needs to be.

56. That the KWA line will be bringing untreated Lake water to the Flint Water Plant where it will need to be treated.

57. That whether it's River water, Lake water or a combination of both, the City of Flint's Plant needs the necessary and recommended investments made before it is allowed to continue as the treatment plant for the City of Flint's primary source of drinking water.

58. That the City of Flint charges the highest water rates in the county of Genesee and the rates are almost eight times higher than the national average.

59. That MCL 141.121 requires a municipality to base its water rates at the reasonable cost of delivering the service.

60. That the City's water rates have not declined since it began using the Flint River as a primary source of drinking water, but have increased in spite of the fact that the City is not only saving the $1 million dollars it paid Detroit monthly, but also continues to collect from Plaintiffs and its residents.

61. That the unhealthy quality of the water combined with the excessive rates charged by the city have caused residents to move out of the City of Flint or simply go without water consumption.

62. That the human body is 60% water, water is needed for proper circulation respiration and converting food to energy and every human needs water to live.

63. That the residents of the City of Flint have converged to Flint City Council Meetings demanding something be done about the unhealthy River water.

64. That many residents have held protests and marches to protest the poor quality of the expensive Flint River water.

65. That in response to the cry of the people, the Flint City Council voted and passed a Resolution "to do all things necessary" to reconnect Flint to DWSD, which passed 7-1.
66. That the President of the Flint City Council, Josh Freeman, (who sits on the KWA Board) was the lone vote against the Resolution.
67. That Mayor Dayne Walling (Chair of the KWA Board) is also against reconnecting to DWSD.
68. That both Councilman Freeman and Mayor Walling have positions on the KWA Board that have placed them in a conflict of interest of being either unable or unwilling to represent the interests of the constituents they were elected to represent.
69. That the previous Emergency Manager Gerald Ambrose, pursuant to PA 436, gave the City Administrator the authority and ability to implement executive and legislative directives and policies of the Mayor and City Council subject only to a Receivership Advisory Transition Board (Board).
70. That the City Administrator has chosen not to acknowledge, respect or follow the duly adopted resolution by the City Council.
71. That the City of Flint residents and citizens are the only people in the entire County of Genesee that are being forcibly subjected to Flint River water against their will.
72. That Sue McCormick, Director of DWSD, made a personal appearance to the Flint City Council in addition to stating in a letter to Flint that Detroit would sell treated lake water to Flint for a fixed monthly rate of $846,700 and $14.92 per 1,000 cubic feet without a long term deal and with no strings attached.

73. That the offer from DWSD has an expiration of **June 30, 2015** and time is of the essence. See *Exhibit F*

COUNT 1-CLAIM FOR DECLARATORY RELIEF

74. That the Coalition incorporates by reference allegations 1 through 73 as though fully set forth herein.

75. That a dispute has arisen between the Plaintiffs and Defendants regarding the condition of the City of Flint's water, the City's ability to properly and effectively run the City of Flint Water Plant, whether the water plant operators and personnel are properly trained and certified, the City's ability to treat River water and/or Lake water and whether the City has violated the Safe Drinking Water Act.

76. That Plaintiffs maintain the City of Flint's usage of the Flint River as a primary source of drinking water has and continues to pose a major and serious threat to the health, safety and welfare of the residents of the City of Flint, that the City has not made the necessary investment in the water plant that has been recommended by two experts, that the water plant operators and personnel have not received the recommended and necessary training and certifications to run the plant effectively, that until the City satisfies the EPA standard of passing the four quarterly LRAA tests, it has not proven its ability to effectively treat River and/or Lake water, and that the City has violated the Safe Drinking Water Act.

77. That the Safe Drinking Water Act mandates that states have programs to certify water system operators and make sure that new water systems have the technical, financial, and managerial capacity to provide safe drinking water.

78. That by underestimating the challenges of treating River water, the City of Flint misled the State and failed to have the technical, financial and managerial capacity to provide safe drinking water when they switched from DWSD's lake treated water.
79. That the City of Flint has also failed to demonstrate their ability to properly treat lake water once the transition is made to the KWA.
80. That the decision to switch to the KWA, which led to the termination of the contract with DWSD was never subject to input from the citizens of Flint and they were effectively disenfranchised from any input in such a major decision.
81. That Plaintiffs and the residents of the City of Flint have suffered at the hands of the City of Flint and the City Administrator, both of whom are not acting in the best interest of the residents and citizens of Flint.
82. That the residents and citizens of Flint have a basic and human right to clean drinking water – free of contamination.
83. That an actual and existing controversy exists between the Plaintiffs and the Defendants as to their legal relations in respect to the above identified matters and a declaratory judgment is necessary to guide the Plaintiffs and Defendant's future conduct and in order to preserve and protect the Plaintiffs legal rights.
84. For the reasons set forth above, Plaintiffs seek a declaratory judgment that the City of Flint's usage of the Flint River as a primary source of drinking water has and continues to pose a major and serious threat to the health, safety and welfare of the residents of the City of Flint, that the City has not made the necessary investment in the water plant that has been recommended by two experts, that the water plant operators and personnel have not received the recommended and necessary training and certifications to run the plant effectively, that until the City satisfies the EPA standard of passing the four quarterly

LRAA tests, it has not proven its ability to effectively treat River and/or Lake water, and that the City has violated the Safe Drinking Water Act and such other relief as the Court deems just and appropriate.

COUNT II. INJUNCTIVE RELIEF

85. That the Coalition incorporates by reference allegations 1 through 84 as though fully set forth herein.

86. Should the Court grant plaintiff declaratory relief, and to the extent that it may be necessary, Plaintiffs seek an Temporary and/or Permanent Injunction restraining the Defendants from continuing to utilize the City of Flint Water Plant to treat the Flint River as the City's primary source of drinking water until it can satisfactorily show compliance with either of the expert recommendations by Veolia or Bob Bowcock and from taking or continuing any action contrary to the declaration of rights sought by Plaintiffs and to appoint a Receiver to run and operate the City water plant until further Order of the Court.

87. That Plaintiffs further seek a Temporary Injunction requiring the City of Flint to utilize the DWSD as its primary source of drinking water until such time as it can demonstrate total compliance with the EPA's quarterly LRAA tests.

88. That if the Court finds that the City can continue run the water plant without the necessary and proper training and personnel and attempt to treat the River water at the expense and against the will of the residents and elected officials, Plaintiffs will suffer immediate and irreparable harm to their health, safety and welfare, particularly the most vulnerable individuals (those with compromised immune systems, the elderly and the infants).

89. That in order to ensure that complete and effective relief is afforded to the Plaintiffs, and should the Court grant Plaintiffs request for declaratory judgment, the public interest would be best served by issuance of a temporary and/or permanent injunction granting such relief as the Court deems just and necessary to effectuate the declaratory relief granted.

WHEREFORE, Plaintiff pray that this Honorable Court will declare the rights and responsibilities of the parties hereto, issue a declaratory judgment and Order Temporary and/or Permanent Injunctive Relief as requested.

COUNT III – VIOLATION OF PLAINTIFF'S FOURTEENTH AMENDMENT TO THE UNITED STATES CONSTITUTION

90. That the Coalition incorporates by reference allegations 1 through 89 as though fully set forth herein.
91. That the City of Flint has a legal obligation to provide municipal water service to its residents.
92. That the Safe Drinking Water Act requires that the water provided meet certain safety standards.
93. That safe drinking water is a necessity to live.
94. That Plaintiffs have a liberty or property interest in receiving safe drinking water to which procedural due process rights apply.
95. That the 14th Amendment to the US Constitution prohibits states from depriving citizens of "life, liberty, or property" without "due process of law.
96. That Plaintiffs were disenfranchised from the decision to terminate the contract with DWSD by the City's Emergency Manager Ed Kurtz and there was no procedure that accompanied that unilateral decision that allowed input, protests, hearings, concerns or questions by the people that were directly impacted.

97. Said decision resulted in Plaintiffs, residents and citizens of the City being deprived of safe drinking water for a substantial period of time and notice was not reasonably calculated, under all the circumstances, to apprise Plaintiffs and residents of the pendency of the action and afford them an opportunity to present their objections.

98. That no "Notices" were sent to the Plaintiffs or residents of Flint explaining the different type of water source, any preparation for the transition, the proposed treatment process or the capability of the plant and the personnel to treat any water, let alone River water.

99. That if the

100. Defendant Equity did attempt to collect monies that Plaintiffs did not owe and created confusion or misunderstanding with respect to the authority of a salesperson, representative or agent to negotiate the final terms of a transaction, in violation of MCL 445.903(1)(m).

101. Defendant Equity has caused a probability of confusion or misunderstanding as to the legal rights, obligations or remedies of a party to a transaction, in violation of MCL 445.903(1)(n).

102. Defendant Equity has engaged in the practice of making liens against real property of homeowners for association dues, assessments, costs and attorney fees associated with the collection of those fees that are grossly excessive, and unless restrained by this court, will continue to engage in such practice.

WHEREFORE , Plaintiffs, by and through their attorney, respectfully requests that this Honorable Court find that Plaintiffs have a liberty or property interest in safe drinking water, that Defendants have violated that right without due process of law and enter judgment in Plaintiffs favor and against Defendants in an amount greater than Twenty-Five Thousand ($25,000.00) Dollars, in accordance with MCL 445.911(3), plus costs, including reasonable attorney fees and grant them such other relief as the Court deems warranted under the circumstances.

COUNT IV - 42. U.S.C. § 1981 & 1983

UNCONSTITUTIONAL DEPRIVATION OF PROPERTWITHOUT DUE PROCESS

103. That the Coalition incorporates and realleges each and every allegation set forth in paragraphs 1 through 102 and incorporate them herein by reference.

104. That Section 1983 states, "Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or Territory or the District of Columbia, subjects, or causes to be subjected, any citizen of the United States or other person within the jurisdiction thereof to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress, except that in any action brought against a judicial officer for an act or omission taken in such officer's judicial capacity, injunctive relief shall not be granted unless a declaratory decree was violated or declaratory relief was unavailable."

105. That Plaintiffs have a liberty or property interest in clean, safe water.

106. That the City has engaged in a practice that has deprived Plaintiffs of safe, clean water without due process, including notice, input, or public hearings before, during or after said deprivation.

107. That the City has deliberately disenfranchised Plaintiffs and deprived them of their liberty or property interest in clean, safe water without due process of law, or just compensation, in violation of the Fourteenth Amendment of the United States Constitution and Article I § 17 of the Michigan Constitution.

108. § 1981. Equal rights under the law , states "All persons within the jurisdiction of the United States shall have the same right in every State and Territory to make and enforce contracts, to sue, be parties, give evidence, and to the full and equal benefit of all laws and proceedings for the security of persons and property as is enjoyed by white citizens, and shall be subject to like punishment, pains, penalties, taxes, licenses, and exactions of every kind, and to no other."

109. That Plaintiffs are the victims of discriminatory conduct by the City by virtue of the contract between Plaintiffs and the City whereby the City agrees to provide clean, safe water in exchange for Plaintiffs payment of a monthly usage fee.

110. That the City has breached this contract by failing to provide safe, clean water following their unilateral decision to terminate the contract with DWSD.

111. That as a result of the City's breach, Plaintiffs have been damaged and deprived of their property interests in safe, clean water without due process of law or just compensation, in violation of the Fourteenth Amendment of the United States Constitution and Article I § 17 of the Michigan Constitution.

WHEREFORE , Plaintiffs, by and through their attorney, respectfully requests that this Honorable Court find that Plaintiffs have a liberty or property interest in safe drinking water, that Defendants have violated that right without due process of law and enter judgment in Plaintiffs favor and against Defendants in an amount greater than Twenty-Five Thousand ($25,000.00) Dollars, in accordance with MCL 445.911(3), plus costs, including reasonable attorney fees and grant them such other relief as the Court deems warranted under the circumstances.

I have read the foregoing complaint and I declare that statements contained therein are true to the best of my knowledge, information and belief. MCR 2.114(B)(2)(B).

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (May 21, August 21, November 20 of 2014, and February 17, 2015). The average of the results at ANY of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the MCL. The standard for TTHM is 80 micro grams per liter (ug/L). The location reporting the highest TTHM level was 105 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. These people may be at increased risk and should seek advice about drinking water from their health care providers.
- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem in 2015. Our most recent individual sample results were all less than half the 80 ug/L standard, however since compliance is calculated using a locational running annual average (LRAA) of the most recent four quarters, we are still out of compliance with the MCL at two of eight locations.

For more information, please contact Mr. Brent Wright at 810-787-6537, or the Flint Water Plant at 4500 North Dart Highway, Flint, Michigan 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

Water Quality Update

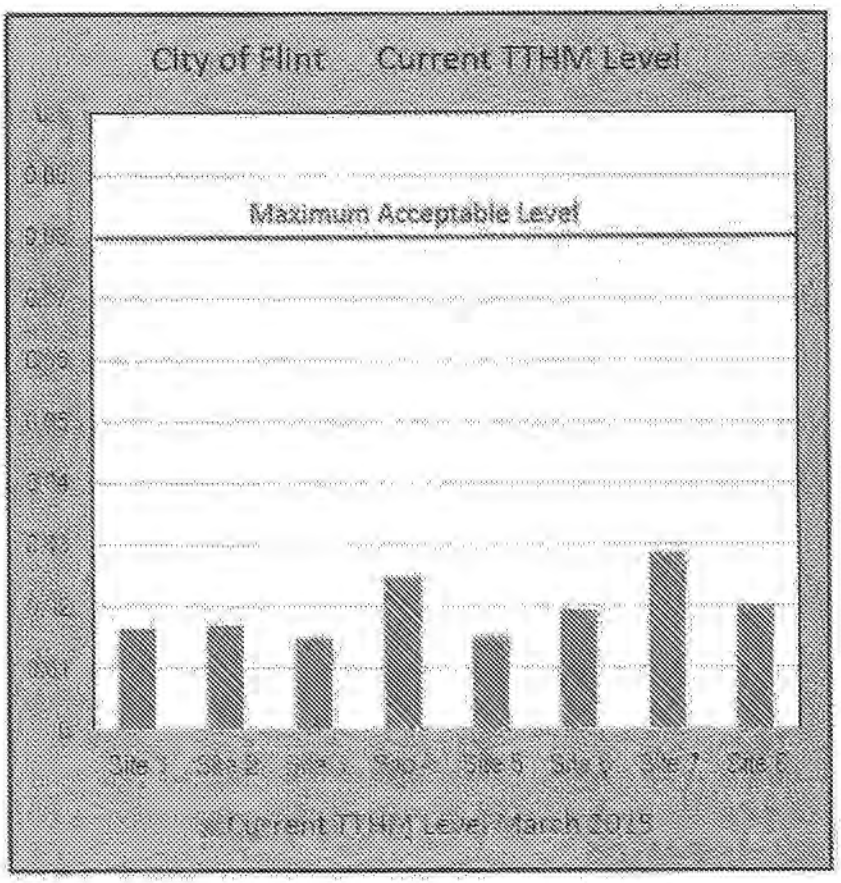
City of Flint Resident:

We are pleased to report that City of Flint water is safe and meets U.S. Environmental Protection Agency guidelines. While we continue to work on improving aesthetic qualities, such as discoloration or odor, you can be confident that the water provided to you today meets all safety standards. Maintaining safety and quality in our water is a top priority of the City.

We accomplished this by:

- Upgrading the ozone treatment process at the Water Treatment Plant
- Increasing water main/hydrant flushing to reduce stagnation
- Conducting additional testing of treatment to identify areas of improvement
- Improving water circulation by repairing valves and adjusting reservoir levels

Our most recent testing in February showed that every testing site was well below allowable levels, as shown below:



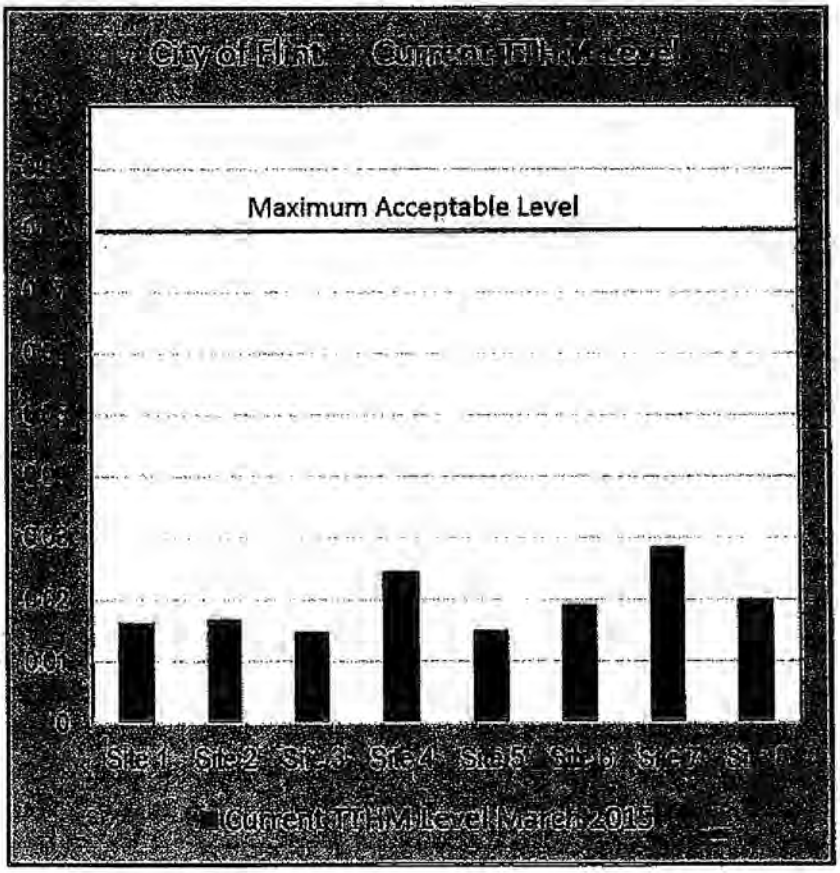
City of Flint Resident:

We are pleased to report that City of Flint water is safe and meets U.S. Environmental Protection Agency guidelines. While we continue to work on improving aesthetic qualities, such as discoloration or odor, you can be confident that the water provided to you today meets all safety standards. Maintaining safety and quality in our water is a top priority of the City.

We accomplished this by:

- Upgrading the ozone treatment process at the Water Treatment Plant
- Increasing water main/hydrant flushing to reduce stagnation
- Conducting additional testing of treatment to identify areas of improvement
- Improving water circulation by repairing valves and adjusting reservoir levels

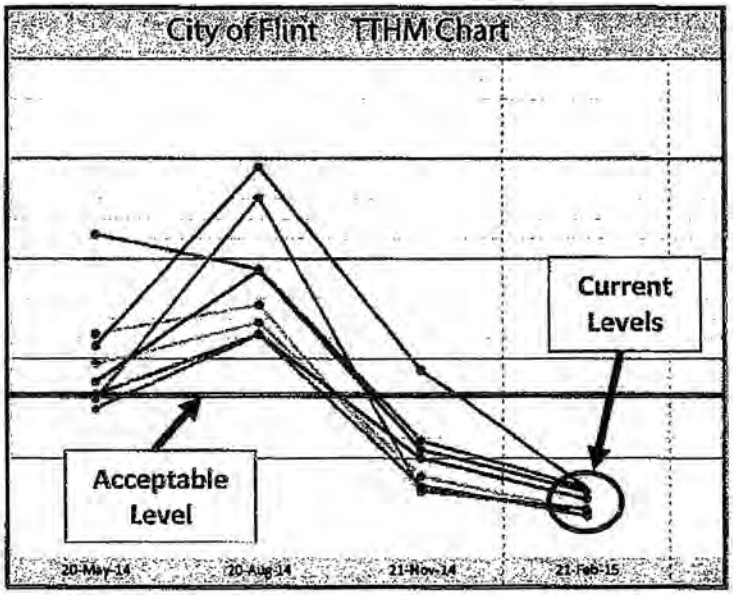
Our most recent testing in February showed that every testing site was well below allowable levels, as shown below:



The Michigan Department of Environmental Quality (MDEQ)has acknowledged our progress:

"We are encouraged by the results from the most recent round of compliance samples collected on February 17, 2015, which now show individual TTHM levels at less than half of the 0.080 mg/L standard at all locations throughout the City's system. Operational Evaluation Reports from December 2014, and February 2015, have identified possible causes and corrective measures for the previous elevated TTHM levels, which we encourage the City to continue implementing." -MDEQ

Notification is based on four quarters of test results. Because of last year's test results, the City's *annual* quarterly testing average is not yet below the state's allowable average and the City is required to issue the attached notice ***("Important Information about Your Drinking Water")***.



If you have any questions about this report or would like a test done at your home, free of charge, please call us at 810-787-6537.

Maintaining safe water and improving its quality is a top priority for all of us at the City of Flint, and we apologize for the concerns these notices have raised. We have taken many steps to improve the safety and quality of our water supply and will be taking more. As you may know, we have recently received a series of recommendations from several sources, including a report from international urban water system consultant, Veolia North America. We will be taking further action steps to assure that water remains safe and that water quality is improved, and we will be working with our recently created Citizen Advisory Committee and our Technical Advisory Committee as we progress. Please track our progress on our website **cityofflint.com**.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem in 2015. Our most recent individual sample results were all less than half the 80 ug/L standard, however since compliance is calculated using a locational running annual average (LRAA) of the most recent four quarters, we are still out of compliance with the MCL at two of eight locations.

For more information, please contact Mr. Brent Wright at 810-785-6537, or the Flint Water Plant at 4500 North Dart Highway, Flint, Michigan 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CITY OF FLINT, MICHIGAN 1855

Integrated Resource Management, Inc.

February 17, 2015

Honorable Mayor Dayne Walling
& Members of the City Council
1101 South Saginaw Street
Flint, Michigan 48502

RE: City of Flint Municipal Drinking Water System
Initial Water Quality Investigation and Water Rate Issues

Ladies and Gentlemen:

I would like to thank the Office of the Mayor and City Council Members for extending such a warm welcome to me on my recent visit to the City of Flint this past weekend. Flint, Michigan enjoys a wonderful history and is part of what has made America strong. Clearly, the City of Flint is a community in transition.

While my initial visit focused on the water supply and immediate concerns for the health and safety of the community water supply, the following recommendations are broader in scope and are meant to be purely constructive.

Source Supply Evaluation

- Update and implement the Source Water Protection Plan.
- Define and identify groundwater quality and quantity inflow variables to the Flint River, specifically from the contaminated sources identified adjacent to the river.
- Define and identify reservoir release surface water quality and quantity variables to the Flint River, specifically from the Holloway Reservoir.
- Thoroughly evaluate the Detroit Water Supply quality characteristics.
- Conduct a detailed "cost of treatment assessment" of the Flint River Water Treatment Plant and compare it directly to the cost per unit of water purchased from Detroit. Publish said results and allow for public input as to the choice of water supplied based upon actual costs versus quality.

Water Treatment Plant

In order to achieve immediate improvement to the water quality in the City of Flint, the following recommendations should be considered for implementation. Said recommendations are made with the intent of being migratory toward ultimate treatment of Lake Huron water from the Karegnondi Water Authority.

- Optimize the ozone disinfection system.
- Discontinue the use of sodium bisulfate to reduce pH in the ozone contact chamber.
- Trust the Plant Operator to use the optimum amount of ferric chloride required for coagulation.
- Investigate the use (jar tests) of ferric chloride and various water treatment polymers to reduce the use of corrosive ferric chloride.
- Discontinue the practice of lime softening. Continue the flow through the softener facility and consider adding a low dose of filter aid (additional polymer) as necessary during seasonal high turbidity.
- Discontinue the practice of fluoridation.
- Discontinue the practice of recarbonation.
- Discontinue the use of pre-filtration chlorine.
- Remove the anthracite coal media from the filter beds and replace it with a granular activated carbon (GAC) material. There are specifically engineered products for use in dual media filters. The use of GAC for organic Trihalomethanes (THM) precursor removal will immediately reduce THM formation in the drinking water supply.
- Post chlorinate disinfect based on residual demand requirements. Post chlorination will not be as intensive as the organic material will be dramatically reduced. The GAC will also serve as a barrier to other types of contamination events (petroleum, chemical, and algae blooms).

Distribution System Operations

- Complete development of the water distribution hydraulic flow model.
- Immediately increase distribution system velocities.
- Re-engineer the distribution system to encourage directional sediment transport for evacuation of system contaminates (sludge, biofilm, sediment, and other debris). This will further aid in chlorine demand management.

- Take at least one of the water system storage reservoirs out of service. Thoroughly clean the storage reservoir, perhaps a program of alternative years of service. With the 2 MG elevated tank, perhaps both reservoirs could be removed from service this year.

Budget & Rate Concerns

I have extremely limited information on the rate-setting program. My recommendations here are more about a process that aids communities with transparency. I have been advised to look at a recent study by one of the local colleges; further, I would need access to a detailed budget and expenditure accounting to provide more specific recommendations.

- Prepare a budget that accounts for all fixed/variable debts: loans, capital depreciation of infrastructure, retirement system obligations; etcetera. This will allow the community to understand exactly where it stands in relation to its debt obligations... before one drop of water is produced. The total of the compilation can then be divided among the consumers based on number and class size of services. It is simple, straightforward, and easily understood.

- Prepare a budget that accounts for all commodity/variable costs: salaries, chemicals, energy, contract services, etcetera. This will allow the community to understand exactly where it stands as it relates to the cost of water. Using historic production and sales numbers, project a water sales figure and divide the commodity costs among the units; this is the true cost of water.

Again, this recommendation letter is very limited in scope. I will continue to make myself available to you and members of the community to answer questions.

The City of Flint, while consulting with the Michigan Department of Environmental Quality, must begin to set its own parameters for compliance with the Safe Drinking Water Act. You have a very well qualified staff at the Flint River Surface Water Treatment Plant and they need to be given the latitude and flexibility to get the job done. I am not in anyway advocating violation of the Safe Drinking Water Act... indeed the recommendations I have made should help bring the City of Flint closer to the actual spirit of compliance as opposed to just meeting the statutory requirements.

Respectfully,

Bob Bowcock

VEOLIA

Water Quality Report
March 12, 2015

FROM
Veolia North America

TO
Emergency Manager Gerald Ambrose

Executive Summary

The City of Flint changed water sources, transitioning from Detroit's system to the Flint River. This change created water treatment challenges that have resulted in water quality violations. Aging cast-iron pipe has compounded the situation, leading to aesthetic issues including taste, odor and discoloration. Public interest and scrutiny of the drinking water system intensified following the distribution of required public notices of violation.

The City of Flint has made a number of good decisions regarding treatment changes that have improved water quality. However, this is a very complex water quality issue and the City is seeking additional advice on what to do to ensure healthful drinking water for the community.

Veolia appreciates the City's decision to seek independent third parties to review current treatment processes, maintenance procedures and actions taken to date, and provide ideas for improvement. We are pleased to present this final report to the City of Flint following our experts' 160-hour assessment of the water treatment plant, distribution system, customer service and communications programs, and capital plans and annual budget.

This report provides recommendations and a roadmap for improvement, though our engagement was limited in scope. Our assessment included reviewing actions taken by the City to date, validating the City's plans going forward, and making recommendations for ideas not being considered.

Although a review of water quality records for the time period under our study indicates compliance with State and Federal water quality regulations, Veolia, as an operator and manager of comparable utilities, recommends a variety of actions to address improvements in water quality and related aesthetics including: operational changes and improvements; changes in water treatment processes, procedures and chemical dosing; adjustments in how current technologies are being used; increased maintenance and capital program activities; increased training; and, an enhanced customer communications program.

We are also providing a recommended schedule and estimated costs for implementing changes. It is our desire to help Flint residents and public officials better understand the current situation so that informed decisions can be made to ensure safe drinking water for the city's customers.

Review of Actions Taken to Date

To address water quality issues, the city has made operational changes, sought help from the State, hired engineering firm Lockwood, Andrews & Newnam, Inc. (LAN) to provide additional advice, and hired Veolia for an assessment from a utility operator's perspective. The City has also reached out to different specialty vendors (chemical suppliers, filter companies and tank aeration companies) for information about products to help with the TTHM issues. These are logical steps to take.

Flint is not alone in dealing with TTHM problems, as many utilities across the country are facing this challenge. The City appears to be following standard steps that many of those communities are taking to successfully correct the problem.

Although the primary focus of this review was based on solving the TTHM problem, the public has also expressed its frustration over discolored and hard water. Those aesthetic issues have understandably increased the level of concern about the safety of the water.

The review of the water quality records during the time of Veolia's study shows the water to be in compliance with State and Federal regulations, and, based on those standards, the water is considered to meet drinking water requirements.

The City has been proactive in its efforts to reach out to the medical community, to set up a phone number and email address to receive complaints, to post State Water Quality reports, to provide the list of EPA required water tests, and offer to test the water at customers' homes.

From our review, these numerous efforts demonstrate how the city is trying to be transparent and responsive beyond what many other communities might do in similar circumstances.

To address water quality issues, the city has made operational changes, sought help from the State, hired engineering firm Lockwood, Andrews & Newnam, Inc. (LAN) to provide additional advice, and hired Veolia for an assessment from a utility operator's perspective. The City has also reached out to different specialty vendors (chemical suppliers, filter companies and tank aeration companies) for information about products to help with the TTHM issues. These are logical steps to take.

Flint is not alone in dealing with TTHM problems, as many utilities across the country are facing this challenge. The City appears to be following standard steps that many of those communities are taking to successfully correct the problem.

Although the primary focus of this review was based on solving the TTHM problem, the public has also expressed its frustration over discolored and hard water. Those aesthetic issues have understandably increased the level of concern about the safety of the water.

The review of the water quality records during the time of Veolia's study shows the water to be in compliance with State and Federal regulations, and, based on those standards, the water is considered to meet drinking water requirements.

The City has been proactive in its efforts to reach out to the medical community, to set up a phone number and email address to receive complaints, to post State Water Quality reports, to provide the list of EPA required water tests, and offer to test the water at customers' homes.

From our review, these numerous efforts demonstrate how the city is trying to be transparent and responsive beyond what many other communities might do in similar circumstances.

State Report

The Michigan Department of Environmental Quality (MDEQ) has requested specific actions be taken related to the total trihalomethane (TTHM) issues. The February 2015 report from LAN (*Operational Evaluation Report TTHM Formation Concern*) indicated apparent reasons for the elevated levels of TTHM in the distribution system. These generally relate to high Total Organic Carbon (TOC) in the water source, improperly operating equipment both in the plant and the distribution system, less-than-optimal plant TOC removal and old cast-iron pipe in the distribution system. **Our assessment confirms that these reasons are likely given our on-site laboratory testing and analysis, as well as our first-hand observations.**

Due to time constraints, LAN's report to the State was submitted prior to Veolia's final analysis and recommendations, and contained a number of key initial and contingent steps the City should consider, including:

Initial Actions

- Hire a Third Party Water Quality Expert to Complete Independent Audit
- Obtain a THM Analyzer
- Carry Out Jar Testing
- Water Plant Optimization Softening
- Water Plant Optimization Disinfection of Filter Beds (Pre-Chlorination)
- Water Plant Optimization Polymer Aid to Coagulation and Flocculation
- Increase Water Main Flushing
- Water Modeling Cedar Street Pump Recirculation
- Water Modeling West Side Pump Recirculation
- Broken Valve Locations
- Increase Flushing

Contingent Actions

- Fix Ozone System
- Start Feeding Coagulant and Flocculation Polymer
- Convert to Lime and Soda Ash Softening
- Change Disinfection to Chloramine or Chlorine Dioxide Temporarily
- Install Pre-Oxidant at Intake
- Replace Filter Media Implement Advanced Treatment
- Increase Main Flushing
- Continue Valve Replacement
- Emphasize Cast Iron Pipe Replacement

Veolia's Recommendations

While many of Veolia's recommendations match the initial assessment provided by LAN, our approach, as an operator and manager of comparable utilities, considers a more comprehensive solution. These improvements include operational changes, differences in water treatment regimes and chemical dosing, increased maintenance, and increased training.

- **Addition of Permanganate** – The addition of a permanganate chemical will help reduce ozone demand as well as chlorine demand. The reduction of ozone is needed to help eliminate the possibility of violating the bromate limit. The addition of the chemical will require state approval, submission of design documents for approval, procurement of the equipment and installation. The State has indicated they will work with the City on expediting review and approval of any requested changes. The required dosage of permanganate is estimated to range from 0.5 mg/L to 1.2 mg/L with a corresponding price of $160,000 to $320,000 per year. (Please note – The water in the river is dynamic which means it will change with weather, seasons and other factors. The estimates provided are based on bench testing at a given time and as such require the operators to test water and to verify chemical dosages on a frequent basis.)
- **Reduction of Ozone Feed** – Treating water is a delicate balance - increasing ozone to fix the TTHM problem can raise bromate levels to a point of violation. The introduction of permanganate is being recommended to reduce the demand for ozone so that feed rates will not exceed 5 mg/L. The current ozone dosing has been as high as 8 mg/L and, as such, if allowed to continue, will increase the risk of violating the bromate levels.
- **Increase of Ferric Chloride** – Four coagulants were tested by Veolia -ferric chloride, ferric sulfate, polyaluminum chloride (PACl) and aluminum chlorohydrate (ACH). Ferric chloride and ACH were found to be the best choice of product for effectiveness in removing TOC, a precursor to TTHM formation. Current ferric chloride dosages are too low and dosages of 100 mg/L or more are recommended. Again, please note, that the amount of chemical needed changes with the nature of the river and as such, water must be tested multiple times a day with corresponding changes in chemical dosages. This increase to 100 mg/L is twice what is currently being fed and much higher than what had previously been fed last year. The increase in chemical costs could be up to $1,000,000 per year. This change in dosage (using ferric chloride) can be made immediately without state permit review.
- **Reduction of Lime** – Lime is currently being overfed. A higher dosage of lime does not necessarily mean better treatment. A review of different dosages with jar testing indicates that the current dosage of 280 mg/L can be reduced to 230 mg/L. This represents a potential range of savings of up to $270,000 per year. This change can be made immediately. It should be noted that the current softening equipment is in poor condition, which does complicate the treatment process with a poor balance of flow between the two basins, weirs that are not level causing bypassing with the softener basins, and simply old mechanical equipment that periodically breaks down. This equipment is not going to be needed when a change to lake water occurs. Addition of soda ash to help further reduce hardness in cold weather might require dosages up to 40 mg/L with an annual chemical cost up to $320,000. There have also been some questions or complaints from the public regarding hard water. The water entering the plant is currently 360 mg/L and the plant is reducing that level of hardness to about 210 mg/L. Optimization of the dosage can reduce the hardness

further to about 180 mg/L. This reduction however has been sporadic as equipment breakdowns and high flows have caused problems keeping the softening process on-line. As we have noted before, the dosage needs to be adjusted daily or more often based on process control monitoring. The raw water hardness in the summer is much less than in the winter. For illustration purposes, the difference could be 360 mg/L in raw water in winter compared with 220 mg/Lin the summer.

- **Eliminate Pre-Chlorination on the Filters** – The reduction of pre-chlorination on the filters during the summer months can help reduce TTHM formation. This action has to be considered carefully with procedures documented and reviewed for engineering principles. As such, it will take time for the design engineer to determine what could be done to assure the proper chlorine contact time and document that other safety protocols in water are met. This requires state approval. Any submission should be considered along with a possible change in filter media. If Granulated Activated Carbon (GAC) is installed then the pre-chlorination would be stopped or drastically reduced because of the chlorine impact on the GAC filter media. Veolia's initial investigation into changes in chlorine feed point indicate that the recommended action can be accomplished while maintaining the required regulatory contact time for disinfection.
- **Change Filters to Granulated Activated Carbon (GAC)** – The object of the other changes being made is to reduce the TOC before chlorine is added into the process. The plant by design is limited on the amount of TOC removal possible. A maximum removal of only 60% is likely if the plant is properly optimized. The change of filter media to GAC would provide the best reduction possible and provide better than 90% removal dramatically reducing the potential for TTHM formation and thus ensuring compliance with that parameter for the water system. The change in filter media; however, is complicated requiring approval by the state, design of the changes, procurement of the media and a contractor to install it. That will take time and is likely in a range of $1.5 million (more or less) in cost. The use of GAC also requires more testing and monitoring of the media and the TOC than with the current media. GAC will accumulate TOC and begin to become in effective after a period of time. Depending upon the level of TOC reaching the filters this could be as short as 3 months and as long as 9 months. The amount of TOC is dependent upon the river water quality and operation of the other plant processes. Once the ability of the filters to remove TOC is diminished, the GAC media has to be replaced if river water continues as a source. The change to lake water will not require TOC removal and the media could continue to be used as filter media for that new water source.
- **Corrosion Control** – The primary focus of this study was to assure compliance with the TTHM limits. That is not the only problem facing the city and its customers though. Many people are frustrated and naturally concerned by the discoloration of the water with what primarily appears to be iron from the old unlined cast iron pipes. The water system could add a polyphosphate to the water as a way to minimize the amount of discolored water. Polyphosphate addition will not make discolored water issues go away. The system has been experiencing a tremendous number of water line breaks the last two winters. Just last week there were more than 14 in one day. Any break, work on broken valves or hydrant flushing will change the flow of water and potentially cause temporary discoloration.
- **Eliminate a Storage Tank** - The water system has more storage than it requires, due to excess capacity in the water lines in combination with the storage tanks. The City has already employed LAN to update the hydraulic model. The hydraulic model should be used to help determine if water levels can be lowered further and even to remove some storage tanks from service. That decision may need to be made

seasonally. For example demand during water main breaks last week required extensive amounts of water. The excess storage is more a problem with TTHM formation for the system in summer than winter.

- **Prioritize Valve Replacement** - The hydraulic model shows long water age in portions of the system that appear to be contributing to the TTHM problems. LAN has updated the model to include the location of broken valves and that added information is being used to identify other system problems. The City has a contract for valve turning and repair work that should be focused on known broken valves, particularly in sections of the distribution system with old water age. This activity however must wait until warmer weather in fear of causing problems in the water system with lines freezing.
- **Target and Increase Flushing** – Flushing the fire hydrants can be useful in cleaning out lines to minimize discolored water complaints and also helping reduce the age of water. This DOES NOT mean just opening hydrants. The hydraulic model needs to be used to determine which hydrants should be opened and for how long to ensure the lines are properly cleaned. For example, this might require 15 minutes or even several hours of flushing depending on location. The flushing of hydrants also needs to include records of hydrant condition, color of water initially and after periodic increments plus chlorine residual testing. All of that information will help provide information to the engineers on the effectiveness of the procedure. Each crew doing the work should be trained to help explain the process to the public and also warn neighborhoods about flushing so that staining of laundry can be avoided.
- **Change to Lake Water** – The changes being made now to the water plant will not be the same changes required to treat lake water once it becomes available. A thorough analysis and plan needs to be made in preparation of that switch. This is going to need to include changes in how the plant is operated, like eliminating lime softening and reducing the dosages of many chemicals. Consideration will also have to be given to algae treatment when lake water is being used.
- **Operating Programs** – All of the changes discussed above are based on testing and techniques proposed by engineers and skilled operators of both LAN and Veolia. The staff will need further training and implementation of detailed protocols to successfully implement the changes and to ensure long-term success at the plant. This means the City needs to implement a series of programs to ensure success in these changes.
    - **Process Control Management Plan** (PCMP) – The amount of testing and resulting changes in chemical dosages, along with monitoring the impact on the water, will require a well-documented process that all operators follow. An example of this is jar testing, which is used by the operators to identify the most effective chemicals and dosages to optimize treatment. The staff understands the basic treatment process but needs further practice and training to become proficient in the use of routine process control to adjust for water quality. This is commonly referred to as a PCMP and is used as a standard operating procedure so that the operators on the day shift can communicate with the night shift, that operators are following the same treatment plan for water, that the adjustments are unified between different shifts and different people, that a desired water treatment quality is defined and variations from it signal alarms and that the staff knows what to do when the water quality setpoints begin to drift away from its desired quality levels.
    - **Lab QA/QC** – The operation of the water plant is dependent upon accurate lab results. Standard operating procedure needs to be set and lab technicians trained in that process. EPA and the State

set procedures and standards to be met and the staff should strive to meet those standards. The City has already purchased a TTHM analyzer but should also consider a TOC analyzer that can be an online continuous device to provide immediate information on influent and effluent levels of TOC. Part of the lab records should be historical review of data to help operators better understand the changes they make in the plant.

- **Maintenance Management** – The key to water equipment is having all the equipment effectively maintained and functioning properly. The current capital program is fixing many broken pieces of equipment and updating the plant to current standards. This however must be followed with a rigorous maintenance program that ensures the proper preventive maintenance; is able to predict when maintenance is needed to keep equipment functioning properly and responsive to changes in flows and source water quality.
- **Training** – The changes being suggested are new to the staff and as such training needs to be provided in what the changes involve, why they are being made, the impact on the water quality, and how best to run the plant. A good demonstration of skill level is for the staff to become certified by the State as a licensed water plant operator. Many utilities now require all operators to hold at least the minimum certification level as a starting point and offer incentives to increase their certification level.

- **Communication Program** – The city should lay out an immediate, written strategy for communicating with the public in the short-term, as well as a 6-to-12 month strategy that contemplates known, future events like the KWA pipeline and switch to lake water. A wide range of activities are underway to work with the public but a comprehensive and coordinated effort, with a strategic focus, will help the utility and its customers.
  - **Dedicated Communications Personnel** – The City has a single, dedicated public information officer, tasked with providing service to all of city government. The current focus on communications support for Public Works, and the anticipated needs over the next several years, indicate the city would benefit from the hiring of a staff person in Public Works who could establish a communications program designed to provide clear and concise information to a broad audience though a number of different channels. In the interim, the city could hire a communications intern, local communications firm, or somebody with experience who is able to provide reduced or no-cost services for the immediate future.
  - **Communications Planning – Public Notification** – The City should be congratulated on its efforts to keep the public informed. It is posting its monthly reports on the web page to provide transparency, though these reports are highly technical – and may be too technical for the customer base at large. They are valuable to those customers who do want this level of detail. The city should create a single-page dashboard of information that outlines the water utility's performance for the previous month, post the dashboard on the website, print copies for distribution at customer service or other reception areas, and be provided during speaking engagements or other events. This dashboard should be easy to understand, and include:
    - The number of water quality tests conducted the previous month
    - The number of violations reported

- Whether these results are in or out of compliance
- Information about other proactive measures such as main and hydrant replacements, or other programs to improve performance of the water utility
- Benchmarking information so the reader has a greater understanding of how Flint compares with other similar utilities in the region and across the country

- **Public Meetings** –There should be additional, proactive coordination with neighborhood, community and civic groups to provide speakers on timely topics. Given the list of numerous responsibilities, the Public Works director cannot do it alone – the city should identify three or four other staff members, knowledgeable about the water utility who can also speak to various groups, provide information and answer questions. The development of an outreach strategy to target key neighborhood, community and civic groups also will advance the communications effort and the dissemination of information in both the short and long term.
- **Standard tools** – Work crews in the field are often the faces of the utility – the city should create standardized tools for communicating with the public that can be easily and quickly delivered to the community in the event of main breaks, flushing or pre-planned capital improvements. Tools should include:
  - Door hangers for individual distribution
  - Yard signs with simple messaging to be placed near work-sites
  - A simple tri-fold brochure with useful information about the utility and appropriate contact information
  - Specific flyers about a range of topics
  - Infographics about how the water system works, from the intake to the customer's site
- **Change in Billing Format** – The City currently has no real way to reach all customers on a regular basis and provide information. The city should consider changing from a billing postcard to using an envelope and bill stuffer. Monthly or bi-monthly bill inserts are typically used to provide educational material for customers and are standard ways to provide information. Understandably, budget considerations must be taken into account.
- **Use Public Affairs Programming and Opportunities** – The news media has been covering this topic quite extensively – there are other media-related opportunities that may reach a wider audience. Taking advantage of these opportunities will help the city relay information to its customers and the community.
  - Participate in regular editorial-board meetings to provide background information and updates on key milestones or events.
  - Identify a local weekly television program and offer to provide guests to speak about key milestones or upcoming events.

Conclusions and Next Steps

The focus of this report is to help assure TTHM compliance and then improve general water quality. The City had good results in its most recent TTHM tests, although that is to be expected with the changes made to date and the cooler weather which contributes to low TTHM formation. Warm weather will be a different situation both in the nature of the Flint River water quality and in the formation of TTHM. With those changes coming, the City needs to act quickly to make improvements before additional testing takes place this spring and summer. The summary below provides the recommended actions, a priority for their implementation and projected costs either operational or capital. The costs are rough orders of magnitude and will vary with changes in water quality, operational decisions, and engineering choices being made and in some cases require State approval. Although a priority is assigned many of these actions can take place simultaneously.

Priority	Action	Annual Operational Cost	One Time Capital Cost
1	Implement operating programs for process control, lab QA/QC, maintenance, and training. These programs are needed regardless of the TTHM issue and will help with transition to lake water. The City has decided upon a central maintenance software and the water system should be the first to utilize this program since costs are already budgeted. These programs should be initiated immediately.	$ 25,000	$ 250,000 - $ 350,000
2	Contract with your engineer and initiate discussions with the State on the reduction of chlorine prior to the filters and changing the filter media to GAC. This activity has the longest time frame for design and approval, but also is extremely critical to assuring reduced TTHM production. The current filter cleaning and maintenance project needs to be adjusted to take into consideration the change in filter media both to dispose of the anthracite instead of cleaning and to install the GAC. This entire project needs to be done by early July to assure a flow of water throughout the system. Several months are required for the engineering design, State approval, bidding of work and installation of GAC and as such needs to begin now.	$ 0	$1,500,000
	Contract with your engineer and initiate discussions with the State on the addition of 0.5 to 1.2 mg/L of either potassium permanganate (dry) or sodium permanganate (liquid). This will take time to get approved and to implement. The use of liquid tanks at the raw water pump station may be the quickest and least expensive alternative for a temporary measure.	$ 160,000 - $ 320,000	$ 50,000

	Contract with your engineer and initiate discussions with the State on the addition of a corrosion control chemical. This action can be submitted and discussed with the state at the same time as the other chemical and filter changes saving time and effort. A target dosage of 0.5 mg/L phosphate is suggested for improved corrosion control.	$ 50,000	$ 50,000
3	Increase the ferric chloride dosage to 100 mg/L depending on river water TOC levels. (Lower TOC levels can be treated with less ferric chloride.) This change can be made now and is allowed by the State.	$ 1,000,000	$ 0
	Reduce the ozone feed rate to 5 mg/. This change can be done now and does not require State approval.	($50,000 – $100,000	$ 0
	Reduce the lime dosage to minimize hardness levels after softening. This will eliminate magnesium removal during treatment, but will also reduce total hardness. A reduction in carbon dioxide dosing for recarbonation treatment also is expected due to the reduction in lime feed. This change can be made now and does not require State approval.	($270,000)	$ 0
4	Confirm with the engineer when the revised hydraulic model will be completed and if necessary for time to focus on areas of longest water age if that would speed up the effort. Identify impact of reducing tank levels or eliminating a tank seasonally to improve water age. Include with this effort a list of hydrants to flush along with time required to assure drawing fresh water through the system. The engineer has been assigned this task already and confirmation of the timing of a delivery is needed.	$ 0	Already Contracted
	Ask the engineer to identify closed valves on a map that are impacting water age and that can be bid for replacement as soon as weather permits. Have the engineer identify areas of the system where the valve contractor should be focused on finding and fixing closed valves.	$ 0	Already Budgeted
5	Implement the recommendations in the communications program including a person assigned to public works education, using envelopes instead of cards along with bill stuffers for education and provide training for staff. Envelopes and bill stuffers are expensive and might be done periodically and not every month. The cost of TTHM notices, Annual Water Quality Reports and City notices should be figured into if any additional costs would exist. Many of these changes are underway now by the City.	Position Being Budgeted	

Notes

- The costs provided are rough order of magnitude which final engineering will firm up but will fluctuate with final decisions on engineering, operating technique and water quality.
- The change from river to lake water will dramatically cut the chemical costs as less is needed once the change occurs. This means that potassium permanganate will likely not be needed, ferric will drop as much as it went up, ozone levels will be lower and little lime will be needed.

Results Expected

The real question is what changes can be expected from these results in lowering the TTHM, improving the aesthetics and preparing for the change to lake water.

- **TTHM** – The City has already made great strides in reducing the TTHM levels with the changes already made. The additional suggestions by Veolia will further reduce TTHM in the water and help get the city released from the notices being provided to customers.
- **Hardness** – The hardness entering the plant this winter is 360 mg/L with the current system reducing it to 210 mg/L and optimization will reduce to about 180 mg/L. During the summer the levels will be lower probably in the 140 mg/L to 150 mg/L range. The target set by the current best operating practices is 120 mg/L to 150 mg/L.
- **Discolored Water** – The discolored water is caused by the old unlined cast iron pipe. The water from the plant can have an impact on discolored water, but a greater concern is the breaks and construction work that disrupt the flow of water causing discoloration. A polyphosphate is suggested to help bind the old cast iron pipe reducing instances of discolored water. This along with improve flow of water and programmed hydrant flushing will help, BUT WILL NOT eliminate discolored water occurrences.
- **Change to Lake Water** – The recommendations include the suggestion of programs to help the staff better manage the treatment process, additional testing to adjust the plant and additional lab monitoring, a maintenance program focused on keeping equipment properly functioning and more training for staff to improve their skill level. Those actions will prepare the staff for the change of water sources when it comes next year in addition to developing a thorough plan for the switch.

CITY OF DETROIT
WATER AND SEWERAGE DEPARTMENT
OFFICE OF THE DIRECTOR

735 RANDOLPH STREET
DETROIT, MICHIGAN 48226-2830
WWW.DETROITMI.GOV

January 12, 2015

Mr. Darnell Earley, Emergency Manager
Mr. Dayne Walling, Mayor
City of Flint
1101 S. Saginaw Street
Flint, Michigan 48502

Regarding: Reestablishing Detroit Water and Sewerage Department Water Service

Dear Messrs. Earley and Walling:

I was recently referred to a report in MLive in which there was reference to the City of Flint (City) potentially re-visiting its decision to utilize Flint River water as a water source prior to the completion of the KWA pipeline. Within that report, there appeared to be some incorrect assumptions about the cost of water service from the Detroit Water and Sewerage Department (DWSD). I write to you today to express the willingness of DWSD to resume delivery of drinking water to the City and its residents. We have monitored the water quality issues that have troubled the City since May, 2014, and understand that many of the difficulties stem from the limited access to source water. Please know that DWSD is ready, willing and able to resume service to the City if you so desire.

If the City is interested in a long term arrangement with DWSD, with this goal in mind, we offer that the City can immediately reconnect to the DWSD system at no additional charge to the City and at the same "expired contract" rate that the City was paying in April, 2014, modified to reflect the 4% increase experienced by all other wholesale customers in July, 2014. The resulting rate structure is a fixed monthly rate of $846,700 and a commodity rate of $14.92/Mcf. In order to facilitate contract negotiations, DWSD is willing to extend this rate to the City (and to Genesee County as the City's partner and former customer) until June 30, 2015.

We at DWSD take very seriously the matter of drinking water quality, and we are as concerned as you must be by the continued quality issues faced by the City and the concerns expressed by your citizens. We are confident that DWSD can provide you with a solution for reliable, safe, high quality water on an expeditious timeline. Please contact me directly at (313) 224-4701 if you wish to discuss this offer further.

Sincerely yours,

Sue F. McCormick
Director

To: Howard Croft (hcroft@cityofflint.com); mglasgow@cityofflint.com
Subject: FYI - EPA staff assistance

Mike and Howard,

Hope you had a nice holiday.

EPA Region 5 wanted us to forward you the following EPA contacts for technical assistance as you see fit. I know you already had one individual from EPA participating on your Technical Advisory group.

- Darren Lytle is with the EPA Office of Research and Development (resume attached)
- Michael Schock also with the EPA ORD (info attached)

My understanding from Region 5 is that Mike Schock is more of an expert on lead.

If you have questions, I would suggest contacting them directly as they will be able to better describe what resources they are capable of providing.

Stephen Busch, P.E.

Experience

U.S. Environmental Protection Agency (EPA)
Office of Research and Development (WSWRD)
Treatment Technology Evaluation Branch (TTEB)
Water Supply and Water Resources Division
26 W. Martin Luther King Dr.
Cincinnati, Ohio 45268

Supervisory Environmental Engineer (Branch Chief, Acting) (May 2012 to present). See below for duties.

Environmental Engineer (GS-14 National Expert) (March 2012 to May 2012). See below for duties.

Supervisory Environmental Engineer (Branch Chief, Acting) (March 2010 to March 2012). Oversees and manages Branch within WSWRD's Treatment, Technology and Evaluation Branch (TTEB). Branch consists as many as twenty-four federally-employed engineers, chemists, and technicians. The Branch conducts drinking research in support of the development of new and previously promulgated Federal drinking water standards. Serves as first line supervisor for a staff of engineers, scientist and technicians. Provides direction, guidance, advice and assistance to Branch staffing all administrative matters and in technical matters, as appropriate; sets priorities for Branch products within research plans; assigns staff, evaluated performance; resolves complaints and disputes within the Branch; handles appropriate personnel actions and issues, including recommending promotions, approving leave and interviewing and recommending candidates for positions within the Branch.

Environmental Engineer (GS-14 National Expert) (June 2009 to March 2010). See below for duties.

Supervisory Environmental Engineer (Branch Chief, Detail) (February 2009 to June 2009). Oversees and manages Branch within WSWRD's Treatment, Technology and Evaluation Branch (TTEB). Branch consists of twenty-four federally-employed engineers, chemists, and technicians, and a number of contractors. The Branch conducts drinking research in support of the development of new and previously promulgated Federal drinking water standards.

Environmental Engineer, National Expert (GS-14) (January 2005 to February 2009). Serves as a nationally and Agency recognized researcher on water treatment and distribution system issues including corrosion control, inorganic contaminant and pathogen control, and biological water treatment. Provides extensive research and technical assistance to EPA for the development and implementation of drinking water rules and regulations. Activities include addressing scientific peer panels like the Science Advisory Board with the results of my research, and participating on EPA workgroups and committees that develop guidelines and policies that the Agency issues to the water treatment utilities for achieving safe drinking water. Plans, directs, and participates in an in-house and extramural (grants/contracts) research program focused on corrosion control, inorganic contaminant and pathogen control, and biological water treatment. Research efforts are integrated into WSWRD, Regional and Program goals and needs. As the nationally recognized researcher, author authoritative scientific papers on research results in peer reviewed professional journals and writes chapters in technical manuals and books. Presents results of research at National Conferences, workshops, symposia and meetings. Organizes and moderates sessions at national

conferences, etc., sponsored by various groups on topics of his special expertise. Called upon by other EPA programs, and organizations such as the Office of Water, various Regional Offices to participate in seminars and workshops.

Environmental Engineer (1990 to November 7, 2008). Plan, design, and conduct in-house and field research on the removal and control of inorganic contaminants such as turbidity, metals and radionuclides, and microorganisms from drinking water using treatment strategies such as conventional coagulation and filtration, slow sand filtration, ion exchange, membrane filtration, and lime softening. Also, address residuals management concerns related to water treatment processes. Plan, design, and conduct in-house and field research on corrosion control of drinking water distribution system materials including lead, copper, brass, and iron. Develop and utilize computer programs related to water chemistry modeling, and statistical and graphical analysis of research data collected from corrosion control and water treatment studies. Present and publish research findings in peer reviewed literature, at conferences, and other outlets. Provide technical assistance to other EPA offices, Federal, State, and Local agencies, consultants, and utilities in the water supply industry. Manage Co-operative Agreements and other mechanisms of extramural funding.

Honors and Awards

2013 U.S. EPA/ORD Scientific and Technological Achievement Award, Honorable Mention, for the paper "Lead Pipe Scale Analysis Using Broad-Beam Argon Milling to Elucidate Drinking Water Corroson".

2013 U.S. EPA/ORD Scientific and Technological Achievement Award, Honorable Mention, for the paper "Multifunctional Silver Coated E-33/Iron Oxide Water Filters: Inhibition of Biofilm Growth and Arsenic Removal".

2011 U.S. EPA achievement award, the Bronze Medal Award for acting as a Project Lead Safe and Sustainable Water Resources (SSWR) under ORD's Strategic Research Action Plans and Research Action Plan Teams

2011 U.S.EPA/ORD Scientific and Technological Achievement Award, Level III, for the book chapter: "Chapter 20: Internal Corrosion and Deposition Control Peer-reviewed book. Water Quality and Treatment: A Handbook of Community Water Supplies. Sixth ed. J.K. Edzwald, editor, (2010)"

2008 U.S.EPA NRMRL Honor Award "Arsenic Removal Technology Demonstration Project"

2000 U.S. EPA achievement award, the Bronze Medal Award, as part of Low Flow Drinking Water Pilot Plant Team.

1999 U.S. EPA achievement award, the Bronze Medal Award, for "A method for assaying a microbial surrogate for evaluating drinking water performance".

1998 U.S. EPA/ORD Scientific and Technological Achievement Award, Level III, for the paper "Application of Aeration to Reduce Lead and Copper in Waters with Suitable pH and Carbon Dioxide".

1997 Awarded an Internal Grant an Investigation, "The Surface Properties of Microbiological Pathogens in Drinking Water".

1997 U.S. EPA's highest achievement award, the Gold Medal Award, as part of the "District of Columbia Drinking Water Core Team". Provided technical assistance to the District of Columbia during a bacterial problem within their distribution system.

1994 U.S. EPA's highest achievement award, the Gold Medal Award, for investigative work and technical assistance to the City of Milwaukee, WI., during their Waterborne Cryptosporidiosis Outbreak in 1993.

1993 U.S. EPA/ORD Scientific and Technological Achievement Award, Level 1, for the paper "Beryllium Determination in Drinking Water by Graphite Furnace Atomic Absorption Spectroscopy (GFAAS)", *Jour. AWWA.*

1993 U.S. EPA/RREL STAR program publication award for the paper, "Removal of Beryllium by Chemical Coagulation and Lime Softening", *J Water SRT-Aqua.*

1993 U.S. EPA/RREL STAR program publication award for the paper, "Preferential Dissolution of Lead from Solder Particulate Material", *Jour. AWWA.*

Subject: EPA Drinking Water Needs Survey - City of Flint Water System
Attachments: 2015 DWINSA Lists of Codes.pdf; Documentation Policy Table (2-page).pdf; EPA Cover Ltr for 2015 DWINSA.PDF; Updating 2011 Survey Instructions Part 1.docx; Updating 2011 Survey Instructions Part 2.xlsm; MI0002310.xlsm; 2015 DWINSA Instructions for Systems.doc; Package Contents and Return Instructions.docx

Importance: High

Mike,

I am sending this out in Mike Prysby's absence. I believe he may have mentioned it to you previously.

The City of Flint community water system has been selected by EPA to participate in the 2015 Drinking Water Needs Survey. This survey documents the 20 year needs regarding all aspects of the City's public water supply system, including source, treatment, storage, distribution, customer metering, etc. The results of the Needs Survey are used to determine state allocation of federal revolving loan funds.

Attached you will find the following related documents:

- EPA Cover Letter
- City of Flint Needs Survey Spreadsheet form (MI0002310.xlsm)
- Package Contents and Return Instructions document
- Instructions for completing the Needs Survey
- Instruction for updating the 2011 Needs Survey form (Part 1, word and Part 2, spreadsheet)
- Needs Survey Code Listing
- Need Code Documentation Table

As the City of Flint participated in the previous Needs Survey conducted in 2011, we are asking the City of Flint to complete the 2015 Needs Survey and return it to our office by August 21, 2015. You will find that information from the 2011 survey has already been entered into the survey form, requiring you to just remove completed projects and add new projects.

To assist you in properly completing the 2015 Needs Survey, Mike Prysby will be available to meet at the City with staff and you may contact him to schedule a meeting.

In the interim, until Mike is back, you may contact me directly with any questions you may have.

We understand the work needed to complete this Needs Survey will utilize valuable staff time, and appreciate your cooperation in its completion.

Stephen Busch, P.E.
Lansing and Jackson District Supervisor
Office of Drinking Water and Municipal Assistance

6	**Please verify or correct the following information:**	
7		
8		
9	Name of System (Community):	FLINT, CITY OF
10	Name of Contact:	WRIGHT, BRENT
11	Street Address:	Flint Water Plant, 4500 North Dort Highway
12	City, State, and Zip:	FLINT, MI, 48505
13	Population Served (if wholesaler, include consecutive population as appropriate):	102,434
14	Number of Connections (not including consecutive systems):	35,132
15	Total System Design Capacity (in MGD):	
16	Total Length of Pipe in System (in Feet):	2,927,860
17	Source Water Type	Surface/GWUDI
18	(Ground, Surface/GWUDI, etc.):	
19	Ownership Type:	Public
20		
21	Public reporting burden for this collection of information is estimated to average 5.53 hours per response. This estimate includes time for reviewing the instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the information collected. Burden means the total time, effort, or financial resources expended by person(s) to generate, maintain, retain, or disclose or provide information to or for a Federal Agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information; adjust the existing ways to comply with any previously applicable instructions; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR Part 9 and 48 CFR Chapter 15.	
22	Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, OPPI, Regulatory Information Division, U.S. Environmental Protection Agency (1804A), Ariel Rios Building, 1200 Pennsylvania Ave., NW, Washington, DC 20460; and Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, N.W., Washington, DC 20503.

1	**Source, Treatment, Storage, and Pumping Inventory**	
2		
3		To ensure all potential source, treatment, and storage projects are considered, it may be helpful to complete some or all of this inventory table.
4		However, completion of this table is not required.
5		▪ **Source Projects** are all projects related to collecting and pumping raw water. This includes wells, surface water intakes, springs, off-stream raw
6		water storage, and pumps.
7		▪ **Treatment Projects** are all projects related to disinfection, filtration, or other treatment processes for ground or surface water sources, or for
8		treatment applied in the distribution system.
9		▪ **Storage and Pumping Projects** are related to finished or treated water storage, and booster pump stations.
10		
11		**Source Water**
12		**Inventory**
13		Total Number and Capacity of Existing Wells or Springs:
14		
15		
16		Total Number and Capacity of Existing Surface Water Sources:
17		
18		Total Number and Capacity of Existing Pumps (excluding booster pump stations):
19		
20		
21		
22		
23		**Treatment**
24		**Inventory**
25		For the sources identified above, enter the number of locations where the following treatment is applied:
26		Disinfection (including booster disinfection):
27		
28		Filtration:
29		
30		Chemical removal or addition:
31		
32		**Storage and Pump Stations**
33		**Inventory**
34		Total Number and Capacity of Existing Storage Tanks:
35		
36		
37		Total Number and Capacity of Existing Booster Pump Stations:
38

23	
24	**New Infrastructure Needs**
25	Does your system have additional treatment needs for provisions of additional public health protection or for aesthetic concerns?
26	
27	
28	☐ Yes
29	
30	If yes, how much additional treatment is necessary?
31	
32	
33	**New Infrastructure Needs**
34	Does your system have additional storage capacity and/or booster pumping needs to meet the needs of current users?
35	
36	☐ Yes
37	
38	If yes, how much additional finished water storage or booster pumping capacity is necessary?

	B
1	**Transmission and Distribution Inventory**
2	**Transmission and distribution projects** are the piping needs of a water system. Projects for **valves, backflow prevention devices and assemblies, and meters** that are not part of a transmission or distribution project listed in this table should be recorded in the table under the tab titled "Inventory Table 3".
3	
4	
5	**Note: The total feet or miles of pipe in your system is required information if any pipe projects are**
6	**submitted based solely on survey-generated documentation (documentation codes 10 or 11).**

2	Projects for meters, service lines, backflow prevention devices and assemblies, valves, and other miscellaneous projects		
3	are recorded in this section to accommodate entries of multiple identical items on one line in the project table.		
4			
5	**Record only projects that are not a part of another project (e.g., water main replacement projects will already include valves and other appurtenances).**		
6	EPA requires documentation of all projects provided. Applicable types of documentation are presented in List 4 of the Lists of Codes. Use only existing documentation of cost. We do not expect you to develop new cost estimates.

Subject: EPA Drinking Water Needs Survey - Karegnondi Water Authority
Attachments: MI0003563.xlsm; 2015 DWINSA Lists of Codes.pdf; EPA Cover Ltr for 2015 DWINSA.PDF; Documentation Policy Table (2-page).pdf; 2015 DWINSA Instructions for Systems.doc; Package Contents and Return Instructions.docx

Importance: High

John,

I am sending this out in Mike Prysby's absence. I believe he may have mentioned it to you previously.

The Karegnondi Water Authority community water system has been selected by EPA to participate in the 2015 Drinking Water Needs Survey. This survey documents the 20 year needs regarding all aspects of the KWA public water supply. The results of the Needs Survey are used to determine state allocation of federal revolving loan funds.

Attached you will find the following related documents:

- EPA Cover Letter
- Karegnondi Water Authority Needs Survey Spreadsheet form (MI0003563.xlsm)
- Package Contents and Return Instructions document
- Instructions for completing the Needs Survey
- Needs Survey Code Listing
- Need Code Documentation Table

PLEASE NOTE a Needs Survey for Genesee County Water System is being requested separately.

As the KWA was not requested to participate in the previous Needs Survey conducted in 2011, we are asking the KWA to complete the 2015 Needs Survey and return it to our office by October 1, 2015.

To assist you in properly completing the 2015 Needs Survey, Mike Prysby will be available to meet at the City with staff and you may contact him to schedule a meeting.

In the interim, until Mike is back, you may contact me directly with any questions you may have.

We understand the work needed to complete this Needs Survey will utilize valuable staff time, and appreciate your cooperation in its completion.

Stephen Busch, P.E.
Lansing and Jackson District Supervisor
Office of Drinking Water and Municipal Assistance
MDEQ
517-643-2314

5		
6	**Please verify or correct the following information:**	
7		
8		
9	Name of System (Community):	KAREGNONDI WATER AUTHORITY
10	Name of Contact:	
11	Street Address:	
12	City, State, and Zip:	
13	Population Served (if wholesaler, include consecutive population as appropriate):	254,245
14	Number of Connections (not including consecutive systems):	0
15	Total System Design Capacity (in MGD):	
16	Total Length of Pipe in System (in Feet):	
17	Source Water Type	Surface/GWUDI
18	(Ground, Surface/GWUDI, etc.):	
19	Ownership Type:	Public
20		
21	Public reporting burden for this collection of information is estimated to average 5.53 hours per response. This estimate includes time for reviewing the instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the information collected. Burden means the total time, effort, or financial resources expended by person(s) to generate, maintain, retain, or disclose or provide information to or for a Federal Agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information; adjust the existing ways to comply with any previously applicable instructions; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR Part 9 and 48 CFR Chapter 15.	
22	Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, OPPI, Regulatory Information Division, U.S. Environmental Protection Agency (1804A), Ariel Rios Building, 1200 Pennsylvania Ave., NW, Washington, DC 20460; and Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, N.W., Washington, DC 20503.	
23	**State Use Only**	
24	**State Reviewer:**	
25		
26	Information provided for this survey can be requested by the public. It is our experience that this information is rarely requested.

1	**Source, Treatment, Storage, and Pumping Inventory**	
2		
3		To ensure all potential source, treatment, and storage projects are considered, it may be helpful to complete some or all of this inventory table.
4		However, completion of this table is not required.
5		▪ **Source Projects** are all projects related to collecting and pumping raw water. This includes wells, surface water intakes, springs, off-stream raw
6		water storage, and pumps.
7		▪ **Treatment Projects** are all projects related to disinfection, filtration, or other treatment processes for ground or surface water sources, or for
8		treatment applied in the distribution system.
9		▪ **Storage and Pumping Projects** are related to finished or treated water storage, and booster pump stations.
10

1	**Transmission and Distribution Inventory**
2	**Transmission and distribution projects** are the piping needs of a water system. Projects for **valves, backflow prevention devices and assemblies, and meters** that are not part of a transmission or distribution project listed in this table should be recorded in the table under the tab titled "Inventory Table 3".
3	
4	
5	**Note: The total feet or miles of pipe in your system is required information if any pipe projects are**
6	**submitted based solely on survey-generated documentation (documentation codes 10 or 11).**

1			
2	Projects for meters, service lines, backflow prevention devices and assemblies, valves, and other miscellaneous projects		
3	are recorded in this section to accommodate entries of multiple identical items on one line in the project table.		
4			
5	**Record only projects that are not a part of another project (e.g., water main replacement projects will already include valves and other appurtenances).**		
6	EPA requires documentation of all projects provided. Applicable types of documentation are presented in List 4 of the Lists of Codes. Use only existing documentation of cost. We do not expect you to develop new cost estimates.		
7			
8			
9			**Needing Replacement**
10	Total Number of Existing Water Meters:		
11			
12	Total Number of Existing Backflow Prevention Devices/Assemblies:		
13			
14	Total Number of Valves:		
15			
16	Total Number of Lead Service Lines:

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

JUN 10 2015

OFFICE OF WATER

Dear Water System Professional:

In partnership with the states, Puerto Rico, the District of Columbia and the U.S. territories (Guam, U.S. Virgin Islands, Northern Mariana Islands and American Samoa), we are conducting the sixth nationwide survey of drinking water systems' capital investment needs.

Your water system is one of approximately 2,800 systems across the country that we have selected to participate in the 2015 Drinking Water Infrastructure Needs Survey and Assessment. Although participation is voluntary, **your response will determine the amount of money your state or EPA Region receives under the Drinking Water State Revolving Fund (DWSRF)**, which enables states and EPA Regions to provide low interest loans and other forms of financial assistance to water systems. Your participation is critical to the success of the drinking water program in your state and EPA Region.

Please work with your state or, if a US Territory, EPA Regional Office to fill out the enclosed questionnaire and provide the needed supporting documentation. You can also contact the Needs Survey contractor at 1-406-443-9194 if you have questions.

Thank you in advance for your help with the 2015 Assessment.

Sincerely Yours,

R. W. Barles

Robert Barles, National Project Manager
2015 Drinking Water Infrastructure Needs Survey

Attachments: Parcels_near_dry_cleaner-noPubSupplConnection (Autosaved).xlsx; RE: Flint Twp 3261 Flushing Rd; 2015 05 04 map Flint Twp 3261 Flushing Rd pub water supply connections near site.pdf

Hi, Lois. The attached list is supposed to be addresses with no public water connections, according to a map from Tim Davidek with the Genesee County Drain Commissioner, Division of Water & Waste Services. The map is also attached. I do need to make sure the analysis has low enough detection limits to detect potential contaminants that exceed drinking water standards. Our site assessment work is funded by the EPA and therefore we have to use their CLP labs, which can do trace level analysis.

Subject: FW: res well sampling planned in Flint Township this Sept. or Oct.

Hi John:

You and I talked a few weeks ago about historical drinking water sampling in the vicinity of Container Specialties in Flint.

I only knew of a couple of possible drinking water well locations there because nearly everyone else on our list had connected to community water.

Which drinking water well locations are planned to be included in your September/October 2015 round?

Do you want to have me coordinate the sampling with Genesee County Health Department as part of our annual contract?

If not, which lab are you using? I need to make sure that drinking water samples are analyzed (assuming voc analyses) using the 524.2 method and not the Environmental Lab's 8360 method.

Hi, Mike. Just a heads up that we are planning some res well sampling in September or October (November if needed) this year and need to coordinate with you during the planning and execution of the sampling as well as communicating with well owners once we have results. We will be conducting a site inspection of the Container Specialties Inc. site at 3261 Flushing Road, Flint, which will include soil, waste, and groundwater sampling. FYI

Subject: RE: Flint Twp 3261 Flushing Rd

John,

Not sure I will have to review our locator map for Flint Township. In the 1 – 2 mile radius of 3261 Flushing Rd I would guess 70% - 75%.

Subject: RE: Flint Twp 3261 Flushing Rd

Thanks a lot, Tim. How much of Flint Township is connected to the public supply? Looks like the area shown in the map you emailed me has about 90% of the residences connected.

Subject: FW: Flint Twp 3261 Flushing Rd

John,

Attached is an aerial of the area south 3261 Flushing Road. For the addresses/parcels with an M attached that address/parcel has public water. If there is not an M associated with the address/parcel they do not have public water.

Thanks,

Tim Davidek

Subject: Flint communications
Attachments: Flint messages 2015.xlsx

Here is a list of the messages I have that involve communication about Flint during the first half of 2015. Most of the messages I received were internal but there are some that included communication with Flint representatives. However, I am simply receiving a copy and one or both of you are also involved in those communications.

The ones that are from me are all internal and not to or with Flint.

RICK SNYDER
GOVERNOR

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

DAN WYANT
DIRECTOR

November 24, 2015

Mr. Michael Glasgow
Utilities Administrator
City of Flint
4500 North Dort Highway
Flint, Michigan 48505

WSSN: 2310

Dear Mr. Glasgow:

SUBJECT: Water Supply - City of Flint (City) Water Treatment Plant (WTP) Standby Operation Requirements

The purpose of this letter is to summarize stand-by operation requirements for use of the City's WTP as an emergency back-up to allow for continuous supply of finished water to the City's entire distribution system in case of an interruption in water supply as a wholesale customer of the Detroit Water and Sewerage Department (DWSD) / Great Lakes Water Authority (GLWA).

At this time, the City WTP has been re-designated as an emergency standby WTP using the Flint River as its water source. Once connection to and raw water service from the Karegnondi Water Authority (KWA) becomes available, the City WTP may once again be converted back into continuous operation using KWA water from Lake Huron as its primary source, and the Flint River as an emergency standby source.

The City WTP, as an emergency standby facility, shall periodically test WTP operations to maintain operational reliability in accordance with the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399), but shall not distribute treated water to its customers as part of these test operations. Instead, treated water shall be discharged to the Flint River in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) under the Natural Resources Environmental Protection Act, 1994 PA 451, as amended. The City WTP shall conduct these operational test runs on a quarterly basis for a minimum duration of one week (7 days) of continuous operation using conventional filtration and disinfection byproduct precursor removal. If the City intends to utilize additional treatment for precipitative softening as part of emergency standby operation, then quarterly operational test runs

shall be conducted for a minimum duration of two weeks (14 days) continuous operation.
Water production operating ranges at the City WTP may be flexible, but must evaluate both operation and performance at varying flow rates under a scheme that incorporates all equipment required to achieve conventional filtration, including but not limited to coagulation, flocculation, sedimentation, and filtration, along with disinfection byproduct precursor removal using ozonation. Additional treatment for precipitative lime softening shall also be included, if applicable.

Adequate levels of treatment staffing shall be provided at the City WTP when in operation. The City shall continue to retain a full time F-1 level certified operator-in-charge (OIC) who shall supervise operation of the City WTP. The City shall also require an F-4 or higher level certified shift operator to be on site and in charge of each operating shift at the City WTP when the OIC is not on site. Sufficient staffing is essential in order to maintain 24-hour operation (either for test-run or emergency operation) of the WTP.

Operational monitoring shall be conducted during test-runs of the City WTP. An operations report shall be prepared for each completed WTP test-run. The operations report shall include all of the following information:

- Treatment rates (daily)
- Ozone dosage (daily)
- Ozone residual (daily average, maximum and minimum)
- Coagulant dosage as Fe^{+3} (daily)
- Turbidity
    - Raw (continuous)
    - Settled (every 4 hours)
    - Applied (every 4 hours)
    - Individual Filter Effluent (continuous)
    - Combined Filter Effluent (continuous)
- Chlorine dosage (daily)
- Chlorine residual (continuous, daily average, maximum and minimum)
- pH, raw and treated (every 8 hours)
- Total Hardness as $CaCO_3$, raw and treated (every 8 hours)
- Non-Carbonate Hardness as $CaCO_3$, raw and treated (every 8 hours)
- Calcium as Ca^{+2}, raw and treated (every 8 hours)
- Magnesium as Mg^{+2} raw and treated (every 8 hours)
- Chloride as Cl^{-}, raw and treated (every 8 hours)
- Total Coliform, raw, post ozone, settled, applied and treated (every 8 hours)
- Heterotrophic Plate Count, raw and treated (every 8 hours)
- Temperature degrees Celsius, raw and treated (every 8 hours)
- Department of Environmental Quality (DEQ) Unit 37 Chemical Analysis, treated water (once per test run by certified lab)

If the City WTP is placed into operation as a result of an emergency, the City shall continue operation of its corrosion control treatment system in accordance with the

provisions outlined in the DEQ's October 30, 2015, letter to the City, *Corrosion Control Treatment Operation*, attached.

Treated water that is discharged must meet the bacteriological and turbidity requirements of Act 399 as a condition of operational preparedness. Treated water that is discharged must also meet any requirements set forth by the DEQ, Water Resource Division (WRD). Please note that according to a November 6, 2015, letter from the DEQ, WRD, to the City, the City's Certificate of Coverage (COC) MIG640053, issued under the NPDES General Permit No. MIG640000, expired April 1, 2015. A COC under this General Permit must be obtained prior to any discharge from the City WTP. Please contact Ms. Stephanie Kammer, acting Lansing District supervisor, WRD, at 517-897-1597 or kammers@michigan.gov, regarding NPDES permitting issues.

Our office would be glad to meet with City staff to further discuss test-run operations in more detail and answer any questions. If you have any questions regarding this correspondence, please contact me at the number below or at prysbym@michigan.gov.

Sincerely,

Michael F. Prysby, P.E.,
District Engineer
Lansing District Office
Office of Drinking Water and
Municipal Assistance
517-290-8817

Subject: FW: Mislabeled attachment?

Can either of you answer Nathan's question? Is this meeting agenda where III. B. states short term goal – Flint River, the only notification we have in writing of Flint's decision to use the river?

Sue

From: Gambill, Nathan (AG)

Subject: Mislabeled attachment?

Sue,

I'm reading through the Flint water documents. Attachment seven is identified in the timeline as Flint's June 2013 notification to DEQ that it plans to use the Flint River. But attachment seven is just an untitled meeting agenda. Is there a mistake, or do we not have anything from Flint formally notifying us of their decision to use the Flint River?

Thanks for any help you can give.

Best,

Nate Gambill

Subject: FW: Complaint on Henry Creek, Lapeer Co.
Attachments: Dec 14 inspection.pdf

Hi Stephanie,
FYi- This is about the Genesee County Impoundment in Lapeer.

We have not received the response to our VN it was due December 15.

First, I left a message with Matt Raysin (Permittee contact). I called and spoke with Mike Moroni from AECOM about obtaining the response that was due yesterday. He said there was a miscommunication between them and the Permittee on who was going to submit it. I told him it was past due.

I told him that I see that they are still having an sediment laden discharge from the site (inspection from Lapeer in a small rain event is attached) and that we have has a PEAS complaint. He said it is "Frankly impossible to remove the sediment from the storm water and if that is the case then we need to address every gravel road in Michigan".

I discussed with Mr. Moroni that he has a permitted site vs a gravel road and with that permit comes obligations. I said I disagreed that there are quite a few options that have not been tried on the site. I offered a site meeting. They would like it before the holidays. We are looking at the 21 or 22 and Lapeer CEA will be invited.

I have no idea if they have applied for a Dam Safety permit. Maybe Luke can let us know about that.

Please let me know if you have any questions.

Funny you should ask. I am going to the scanner right now to get inspection and photos scanned for you and the KWA and contractors. Chip found clouded waters from the outfall throughout the drain near the site. -- And this is with a light rain on Monday.

My report to them will say they may use PAMs, tacked down mulch blankets, etc. to stop sediment from leaving site. They also need to clean drain pipes of sediment ASAP.

You mentioned a while back their sediment basin may not be large enough to handle the storm water. Do you think I should be asking for another one to be installed, or make this one larger?

Report and photos to you in a few minutes.

Subject: RE: Complaint on Henry Creek, Lapeer Co.

Sending staff out to complainant's address today. And it's raining here so we'll get a real-time look at any sediment potentially leaving the site. The site is not blanketed -- there are 2 projects going on simultaneously : the impoundment which has been going for many months - lots of excavation and pushing dirt around; and the water plant site which just started a month or so ago. All the vegetation has been scraped off many acres. There is big equipment all over the place.

I spoke with staff this morning about instructing them to blanket any areas near collection basins and slopes leading to ditches and surface waters. [that they are not driving on].
I agree with you they'll likely have to clean out cement collection pipes. The company did not give staff a lot of details, only that they were working on clean up.

I'll know more when staff return to the office this afternoon.

Have your staff been out there during a rain event? The complainants address is 3321 Marathon Rd.

Thanks for looking into it. Is the site blanketed? Does there appear to be erosion of not they may have to clean their pipes too.

I look forward to an update.
Thanks,
Susan

I think this is actually Genesee County's plant. Susan was out there in November and cited them for soil erosion issues at the site.

I'm not aware that they are permitted for any type of discharge from the plant itself.

> I received a complaint that a new "water plant" (pump station?) constructed to serve the City of Flint pipeline from Lake Huron has a new disharge pipe running from the "plant" at the NE corner of Marathon and Stanley Rd (red circle on bottom of photo, Columbiaville, Lapeer Co) to the west along Stanley Rd, and discharging to Henry Drain (blue arrow). Since installation of the pipe in summer 2015, the quality of Henry Drain has been noticably impacted. They claim it used to be very clear most of the time, but now it is dirty all the time and they won't go in it. They say the pipe from the "plant" discharges a dark liquid in both wet and dry weather.

> The caller was Leslie Dungey at 810-728-2650. Leslie's address is marked on the map, and she said you can come onto their property to look at the condition of Henry Drain where it crosses their property. One reason to take them up on their offer is that they have a bridge over the creek that is visible from an aerial closeup. I did not ask if they pulled a permit for the bridge.

Subject: Genesee County DWRF # 7405-01 (Meters): Comments on Project Plan

Good afternoon, Dan.

Below are my comments on the Project Plan. We ask that you respond to (and/or resolve) these items by January 11th.

#1) I understand the meter replacement map in Appendix B shows the municipalities where new meter installation will take place while the Figure 1-1 shows the actual service area for the county system. Will the entire DWRF project contain meter installation in all 10 townships (i.e. Clayton, Davison, Flint, Flushing, Gaines, Montrose, Mt. Morris, Richfield, Thetford and Vienna) where new meters will be installed? We need you to provide a map which not only shows the municipalities where new meter installation will take place for the entire DWRF project, but also identifies the locations of the proposed five (5) base stations for the entire DWRF project.

In answer to the first part of the question, yes, we will be installing meters in all 10 of the townships. In answer to the second part of your question, there is a propagation map in Appendix B showing the locations of the seven towers in the original project. We have installed the base stations at Beecher Tank and Houran Tank. If you need a new map please let me know.

#2) Are there no capital improvements and/or replacement costs over the 20 year planning period for keeping the Manual Ready System? Are the no replacement costs over the 20 year planning period to switch to the Meter Replacement and AMR/AMI System?

I'm not sure what you mean by " Manual Ready System" ?

No, there are no replacement costs anticipated for the 20 year planning period. The new meters, endpoints and base stations have a 20 year life expectancy.

#3) a. I understand the entire DWRF project has anticipated impacts to the state regulated resources of floodplains, inland lakes and streams, or wetlands. Confirm.

We do NOT anticipate any impacts from the Meter Replacement and AMR/AMI Project.

b. Did you obtain clearance from SHPO? We need a copy.

SHPO letter is in Appendix J and we received no response

#4) a. For the full construction footprint for the entire DWRF project (new meters and antennas), do you conclude that it is in an urban area where no suitable wildlife habitat for state species is present or that the construction work is limited to existing structures? If so, contact with MSU-MNFI can be waived. Otherwise, a Rare Species Review request must be submitted via the MSU-MNFI website (http://mnfi.anr.msu.edu/services/rare-species-review.cfm) to generate a letter from MSU-MNFI staff summarizing their findings.

Yes, we conclude that The Meter Replacement and AMR/AMI Project is an urban area where no suitable wildlife habitat for state species is present and that the construction work is limited to existing structures.

b. For the full construction footprint for the entire DWRF project (new meters and antennas), do you conclude that it is in an urban area where no suitable wildlife habitat for federal species is present, or if construction work is limited to existing structures and in turn the project will have "no effect" on any federally listed species? If so, contact with U.S. FWS can be waived. Otherwise, the U.S. FWS

procedure at Section 7 Consultation website (www.fws.gov/midwest/endangered/section7/index.html) must be followed.

Yes, we conclude that Meter Replacement and AMR/AMI Project it is in an urban area where no suitable wildlife habitat for federal species is present, and the construction work is limited to existing structures and in turn the project will have "no effect" on any federally listed species.

#5) Are any of the new antennas for the DWRF project located within 5 miles of any licensed airport? If so, how much height will the new antennas add to existing water towers or cell towers? If it is significant, you may need to contact MDOT Bureau of Aeronautics.

The new antennas heights are not significant.

#6) Will there be any service interruptions? Yes there may be short service interruptions. If so, what should users anticipate? We have prepared a letter and a FAQ that will go to each customer outlining the process. What hours/days of the week will construction take place? Project work will take place Monday through Saturday during daylight hours with special appointments at other hours to meet customers needs. In a 2nd Quarter schedule, we expect construction to begin by May 2016. Per our telephone discussion you confirmed that we are anticipating a 3rd Quarter Schedule. Based on that we would anticipate construction to begin by July 2016, In turn, when would construction completion be expected? We would anticipate construction completion in July 2018.

#7) Will construction result in traffic congestion, limited driveway access, and/or noise? No. If so, describe mitigation. Any dust/soil erosion? No Will there be any excavation? No. Will a soil erosion permit not be necessary? A soil erosion permit will not be necessary. What permit(s) will be needed for construction? We do not anticipate that any additional permits will be necessary.

#8) Will there be an increase to user rates to repay DWRF loan debt? If so, what is the estimated increase to the annual user rate for the typical residential customer? If not, how will DWRF loan debt be repaid? Page 34 leaves this issue unanswered. Note that while we wait for EPA to decide if the project must be re-bid, we will continue use the $5.4 million cost estimate. No, there will not be an increase in the user rate for the project. The existing rates are sufficient to repay the DWRF loan. See Page 34, the last sentence under Section 3.4. Also see the User Rate Analysis submitted on 12-3-2015.

#9) Below are selections from the November 2010 EA-FNSI for Genesee County DWRF #'s 7340-01 and 7341-01. Is this information still accurate? Identify any updates in your response.

"...Genesee's water system service area consists of approximately 145,000 residents inside the county. as depicted in Figure A, along with over 8,000 residents outside the county in Birch Run (village and

township) in Shiawassee County to the west and New Lothrop in Saginaw County to the north. The Genesee County Drain Commissioner's Office is responsible for the operation and maintenance of the system. Potable water from the Detroit Water and Sewerage Department (DWSD) is purchased by the city of Flint (Flint), which sells a portion of its supply to Genesee. The actual source of the DWSD water supply is Lake Huron in close proximity to the city of Port Huron. After treatment at DWSD's water treatment plant the potable water routed for Flint and then Genesee travels through a single 72-inch-diameter water supply main courtesy of the Imlay Pump Station."

"Genesee's water system (Figure B) has around 116 miles of transmission and distribution water main ranging in pipe diameter size from 6-inch to 72-inch with approximately 98 percent ductile iron, less than 2 percent cast-iron, and less than 1 percent concrete pipe. Genesee's other water system components include 6 major pump stations, 21 storage facilities, and 1 standpipe."

See Revised below

"...Genesee's water system service area consists of approximately 145,000 residents inside the county. The Genesee County Drain Commissioner's Office is responsible for the operation and maintenance of the system. Potable water from the Detroit Water and Sewerage Department (DWSD) is currently purchased by Genesee County. The actual source of the DWSD water supply is Lake Huron in close proximity to the city of Port Huron. After treatment at DWSD's water treatment plant the potable water routed for Flint and then Genesee travels through a single 72-inch-diameter water supply main courtesy of the Imlay Pump Station." Genesee County is a member of the Karegnondi Water Authority (KWA) which is currently constructing a source water supply system from Lake Huron to Genesee County. Genesee County anticipates switching to KWA water in 2017-2018.

"Genesee's water system (Figure B) has around 543 miles of transmission and distribution water main ranging in pipe diameter size from 6-inch to 72-inch with approximately 98 percent ductile iron, less than 2 percent cast-iron, and less than 1 percent concrete pipe. Genesee's other water system components include 6 major pump stations, 21 storage facilities, and 1 standpipe."

#10) We need a list of 40 mailing addresses where water bills are actually sent (i.e. we do not want to our postcards returned to us by USPS) which are for customers that will receive new meters/be located near new antennas for the DWRF project.

We have attached a list of 40 active accounts with both the connection address and the billing address.

Let me know if you have any questions. Thanks.

Darren,

Adam was able to pull the info you requested and it is in the attached email, there are 4 pdfs.

Subject: Quesion

Mike,

Could you provide me Flint distribution system water quality data going back maybe 3 years? I am interested in TCR sampling results, chlorine data, etc... I am interested in comparing historic data to the latest data albeit more extensive now as it comes in.

Thanks much, Darren

Darren, Michael

We have received Flint's corrosion control proposal from their consultant. If you have comments, please provide them to me by Monday morning.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance

Subject: Flint WTP PH2 SEG4 - Corrosion Control

Hi Mike,

Please see attached plans for the Corrosion Control Plan for the City of Flint. I will have the official submittal package to you tomorrow afternoon after I get Brent or Mike's signature on the permit application. I will call you when I get back in Lansing to drop the package. Is three sets of full size plans adequate? Would you like some half size plans? Let me know.

Basis of Design

Given that Flint will require lead and copper corrosion control and given that Detroit utilizes orthophosphate for their corrosion control methodology, and that Flint will be receiving Detroit water for the immediate future, orthophosphate is the appropriate corrosion control methodology for Flint. A dosage of 0.8 mg/l as PO_4 has been recommended for the Detroit water. Numerous utilities utilizing Lake Michigan water have a target dosage of 0.9 mg/l as PO_4. Therefore, a target dosage in the range of 0.8 to 0.9 mg/l appears appropriate.

It is expected that, at least initially, there will be a significant PO_4 demand in the system. This will require a significantly higher dosage until this demand is satisfied and the target residual can be maintained. We are therefore designing for capability of a maximum dosage of 1.5 mg/l.
The arriving Detroit water will likely have some residual PO_4 when it arrives at Flint. It has been reported that this residual will be approximately 0.4 mg/l. The system must therefore be capable of a minimum dosage of 0.4 mg/l.

Based upon the usage of 75% Phosphoric Acid and a flow range of 4 MGD to 25 MGD, with an average day of 16 MGD, the expected feed rate will be 1.35 to 32 gpd. Average Phosphoric Acid feed is expected to be 10.8 gpd, requiring 30 days storage of 325 gal.

Orthophosphate will need to be applied at two locations. Detroit water will enter the Flint system at Control Station CS2, and supplementary phosphate will be applied there. However, on occasion some incoming water may need to be diverted to the Dort Reservoir, bypassing CS2. This water would then be introduced to the system through High Service Pump Station PS4 and phosphate would be introduced at this location.

Please let me know if the information is adequate or you require additional information.

Thanks.

Authority; Act 399, P.A. 1976

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of November 2013

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

SIGNATURE OF APPROPRIATE OFFICIAL

DEQ
RESOURCE MANAGEMENT DIVISION
DEC 18 2013
LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.; Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of October 2013

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

DEQ
RESOURCE MANAGEMENT DIVISION
NOV 12 2013
LANSING DISTRICT

Submit to: Mike Prysby, P.E.

Authority: Act 399, P.A. 1976

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of September 2013

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum___ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity___Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

DEQ
RESOURCE MANAGEMENT DIVISION
OCT 14 2013
LANSING DISTRICT

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of August 2013

Flint Water Plant — 2310 — Genesee
NAME OF WATER SYSTEM — WSSN — COUNTY

Michael Glasgow — F-1R S-3
CERTIFIED OPERATOR — CLASSIFICATION

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum___ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity___Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons
