MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT OF WATER TREATMENT PLANT

ENTERED

For Month of June 2013

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

Michael Glasgow — SIGNATURE OF APPROPRIATE OFFICIAL

DEQ
RESOURCE MANAGEMENT DIVISION
JUL 1 ? 2013
LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

Failure to complete this form is a violation of Act 399, P.A. 1976 and is subject to penalties as outlined in the Act.

Authority; Act 399, P.A. 1976

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

ENTERED

For Month of May 2013

Flint Water Plant — 2310 — Genesee
NAME OF WATER SYSTEM — PWSID — COUNTY

RESOURCE MANAGEMENT DIVISION
JUN 07 2013
LANSING DISTRICT

Michael Glasgow — F-1R S-3
CERTIFIED OPERATOR — CLASSIFICATION

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons _____
11. Total Power Cost per Million Gallons _____

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

ENTERED

For Month of April 2013

Flint Water Plant	2310	Genesee
NAME OF WATER SYSTEM	WSSN	COUNTY

DEQ
RESOURCE MANAGEMENT DIVISION

Michael Glasgow		F-1R S-3
CERTIFIED OPERATOR		CLASSIFICATION

MAY 13 2013

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

D-5a 1/86
Authority: Act 399, P.A. 1976

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

ENTERED

For Month of March 2013

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

Michael L Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

DEQ
RESOURCE MANAGEMENT DIVISION
APR 17 2013
LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum___ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity___Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

Failure to complete this form is a violation of Act 399, P.A. 1976 and is subject to penalties as outlined in the Act.

Authority: Act 399, P.A. 1976

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT OF WATER TREATMENT PLANT

ENTERED

For Month of February 2013

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

SIGNATURE OF APPROPRIATE OFFICIAL

DEQ
RESOURCE MANAGEMENT DIVISION
MAR 13 2013
LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (A13+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

ENTERED

For Month of January 2013

Flint Water Plant — 2310 — Genesee
NAME OF WATER SYSTEM — WSSN — COUNTY

DEQ
RESOURCE MANAGEMENT DIVISION

Michael Glasgow — F-1R S-3
CERTIFIED OPERATOR — CLASSIFICATION

FEB 13 2013

LANSING DISTRICT

SIGNATURE OF APPROPRIATE OFFICIAL

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons _____
11. Total Power Cost per Million Gallons _____

Remarks:

A turbidity spike(inline alarm) was encountered on 1/20/2013 at 5:20pm at Baxter & Potter Rd. A coliform bacteria and turbidity sample were collected at 11:30pm. The sample showed a 0.9 NTU turbidity, a free chlorine residual of 0.8 mg/L, and was absent of coliform bacteria. On 1/21/2013, the daily B&P sample collected at 12:00pm, showed turbidity of .147 NTU. The turbidity event lasted between 12 to 18 hours. The turbidity spike reached Control Station #2 at 3:00pm on the 1/21/2013, and was diverted to Dort Well to allow for some dilution and possible settling for a few days. Daily samples collected from CS# 2 and Dort Well on the 21st and throughout the remainder of the month displayed good chlorine residuals and were absent of coliform bacteria. Lab testing later in the month showed higher levels of calcium, which leads us to believe the spike may have been from a slug of scale in the pipeline.

Submit to: Mike Prysby, P.E.

LANSING DISTRICT

Treatment Rate and Filter Data

Maximum Treatment Rate:	23.8	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	74	Hours
Average Head Loss:	n/a	Feet *(filter head loss meters not operational)
Average Filtration Rate:	2.4	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.2	Gallons Per Square Feet per Minute
Average Wash Water Use:	2.9%	Percent of Treated Water

Chemical Data

Chlorine on hand:	20,000	lb.	Est. supply:	30	days
Primary Coagulant (Ferric Chloride) on hand:	54,000	lb.	Est. supply:	18	days
Lime (CaO) on hand:	296	tons	Est. supply:	34	days
Fluoride on Hand:	16,630	lb.	Est. supply:	35	days
Cost of All Chemicals per Million Gallons:	n/a	dollars			
Total Power Cost per Million Gallons:	n/a	dollars			

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	226	226
Percent of filter confluence samples > 0.3 NTU:	0.0%	0.0%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

CITY of FLINT WATER TREATMENT PLANT MONTHLY OPERATION REPORT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow	**November 2014**
Operator-in-Charge	Month/Year
F-1R, F-2	**F-1**
Certification of Operator-in-Charge	Water Plant Classification
Michael Glasgow	**Genesee**
Signature of Operator-in-Charge	County

DEQ
RESOURCE MANAGEMENT DIVISION
DEC 15 2014
LANSING DISTRICT

Treatment Rate and Filter Data

Maximum Treatment Rate:	18.7	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	76	Hours
Average Head Loss:	n/a	Feet *(filter head loss meters not operational)
Average Filtration Rate:	2.1	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.2	Gallons Per Square Feet per Minute
Average Wash Water Use:	3.2%	Percent of Treated Water

Chemical Data

Chlorine on hand:	12,000	lb.	Est. supply:	15	days
Primary Coagulant (Ferric Chloride) on hand:	194,500	lb.	Est. supply:	22	days
Lime (CaO) on hand:	393	tons	Est. supply:	38	days
Fluoride on Hand:	15,000	lb.	Est. supply:	40	days
Cost of All Chemicals per Million Gallons:	n/a	dollars			
Total Power Cost per Million Gallons:	n/a	dollars			

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	227	227
Percent of filter confluence samples > 0.3 NTU:	0.0%	0.0%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Distribution Sample Summary	
Total # of routine distribution samples analyzed	115
Total # of routine distribution samples required	100

Distribution Bacteriological Summary	
Total # of positive routine distribution samples	0
Percent of routine distribution samples positive	0%

Distribution Disinfectant Total Residual Summary	
Percentage of samples with a detectable disinfectant residual	97%
Average disinfectant residual this month	1.0

See page 9 for positive sample information.

CITY of FLINT WATER TREATMENT PLANT MONTHLY OPERATION REPORT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow	**October 2014**
Operator-in-Charge	Month/Year
F-1R, F-2	**F-1**
Certification of Operator-in-Charge	Water Plant Classification
Michael Glasgow	**Genesee**
Signature of Operator-in-Charge	County

DEQ
RESOURCE MANAGEMENT DIVISION
NOV 17 2014
LANSING DISTRICT

Treatment Rate and Filter Data

Maximum Treatment Rate:	23.3	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	84	Hours
Average Head Loss:	n/a	Feet *(filter head loss meters not operational)
Average Filtration Rate:	1.9	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.3	Gallons Per Square Feet per Minute
Average Wash Water Use:	2.7%	Percent of Treated Water

Chemical Data

Chlorine on hand:	20,000	lb.	Est. supply:	25	days
Primary Coagulant (Ferric Chloride) on hand:	133,600	lb.	Est. supply:	16	days
Lime (CaO) on hand:	239	tons	Est. supply:	24	days
Fluoride on Hand:	10,000	lb.	Est. supply:	27	days
Cost of All Chemicals per Million Gallons:	n/a	dollars			
Total Power Cost per Million Gallons:	n/a	dollars			

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	246	246
Percent of filter confluence samples > 0.3 NTU:	0.0%	0.0%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

CITY of FLINT WATER TREATMENT PLANT MONTHLY OPERATION REPORT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow	**September 2014**
Operator-in-Charge	Month/Year
F-1R, F-2	**F-1**
Certification of Operator-in-Charge	Water Plant Classification
Michael Glasgow	**Genesee**
Signature of Operator-in-Charge	County

DEQ
RESOURCE MANAGEMENT DIVISION
OCT 20 2014
LANSING DISTRICT

Treatment Rate and Filter Data

Maximum Treatment Rate:	24.5	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	97	Hours
Average Head Loss:	n/a	Feet *(filter head loss meters not operational)
Average Filtration Rate:	2.1	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.4	Gallons Per Square Feet per Minute
Average Wash Water Use:	1.9%	Percent of Treated Water

Chemical Data

Chlorine on hand:	16000	lb.	Est. supply:	15	days
Primary Coagulant (Ferric Chloride) on hand:	234,000	lb.	Est. supply:	27	days
Lime (CaO) on hand:	223	tons	Est. supply:	22	days
Fluoride on Hand:	16,630	lb.	Est. supply:	45	days
Cost of All Chemicals per Million Gallons:	n/a	dollars			
Total Power Cost per Million Gallons:	n/a	dollars			

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	180	180
Percent of filter confluence samples > 0.3 NTU:	0.0%	0.0%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

COMPLETED

CITY of FLINT WATER TREATMENT PLANT MONTHLY OPERATION REPORT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow	**August 2014**
Operator-in-Charge	Month/Year
F-1R, F-2	**F-1**
Certification of Operator-in-Charge	Water Plant Classification
Michael Glasgow	**Genesee**
Signature of Operator-in-Charge	County

DEQ
RESOURCE MANAGEMENT DIVISION

SEP 17 2014

LANSING DISTRICT

Treatment Rate and Filter Data

Maximum Treatment Rate:	24.4	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	78	Hours
Average Head Loss:		Feet *(filter head loss meters not operational)
Average Filtration Rate:	2.2	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.3	Gallons Per Square Feet per Minute
Average Wash Water Use:	2.8%	Percent of Treated Water

Chemical Data

Chlorine on hand:	12000	lb.	Est. supply:	10	days
Primary Coagulant (Ferric Chloride) on hand:	209,000	lb.	Est. supply:	23	days
Lime (CaO) on hand:	78	tons	Est. supply:	8	days
Fluoride on Hand:	23,280	lb.	Est. supply:	38	days
Cost of All Chemicals per Million Gallons:		dollars			
Total Power Cost per Million Gallons:		dollars			

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	186	186
Percent of filter confluence samples > 0.3 NTU:	0.00%	0.00%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

CITY of FLINT WATER TREATMENT PLANT MONTHLY OPERATION REPORT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow	**July 2014**
Operator-in-Charge	Month/Year
F-1R, F-2	**F-1**
Certification of Operator-in-Charge	Water Plant Classification
Michael Glasgow	**Genesee**
Signature of Operator-in-Charge	County

DEQ
RESOURCE MANAGEMENT DIVISION
AUG 1 4 2014
LANSING DISTRICT

Treatment Rate and Filter Data

Maximum Treatment Rate:	24.5	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	65	Hours
Average Head Loss:	*	Feet *(filter head loss m[illegible])
Average Filtration Rate:	2.3	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.8	Gallons Per Square Feet per Minute
Average Wash Water Use:	2.5%	Percent of Treated Water

Chemical Data

Chlorine on hand:	21000	lb.	Est. supply:	16 days
Primary Coagulant (Ferric Chloride) on hand:	174,603	lb.	Est. supply:	23 days
Lime (CaO) on hand:	219	tons	Est. supply:	21 days
Fluoride on Hand:	16,348	lb.	Est. supply:	27 days
Cost of All Chemicals per Million Gallons:		dollars		
Total Power Cost per Million Gallons:		dollars		

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	186	186
Percent of filter confluence samples > 0.3 NTU:	0.00%	0.00%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

COMPLETED

County

Treatment Rate and Filter Data

Maximum Treatment Rate:	25	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	74	Hours
Average Head Loss:	*	Feet *(filter head loss meters not operational)
Average Filtration Rate:	2.5	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.5	Gallons Per Square Feet per Minute
Average Wash Water Use:	3.6%	Percent of Treated Water

Chemical Data

Chlorine on hand:	24000	lb.	Est. supply:	20	days
Primary Coagulant (Ferric Chloride) on hand:	63450	lb.	Est. supply:	10	days
Lime (CaO) on hand:	169	tons	Est. supply:	18	days
Fluoride on Hand:	9064	lb.	Est. supply:	16	days
Cost of All Chemicals per Million Gallons:	*	dollars			
Total Power Cost per Million Gallons:	*	dollars			

Remarks

	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	0	0
Number of filter confluence samples collected:	180	180
Percent of filter confluence samples > 0.3 NTU:	0.00%	0.00%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? **NO**
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? **NO**
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? **YES**
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? **NO**
If yes, indicate date(s) and duration on a separate sheet.

COMPLETED

MONTHLY OPERATION REPORT OF WATER TREATMENT PLANT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow
Operator-in-Charge

May 2014
Month/Year

F-1R, F-2
Certification of Operator-in-Charge

F-1
Water Plant Classification

Signature of Operator-in-Charge

Genesee
County

Treatment Rate and Filter Data

Maximum Treatment Rate:	26.9	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	101	Hours
Average Head Loss:	*	Feet
Average Filtration Rate:	2.6	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.8	Gallons Per Square Feet per Minute
Average Wash Water Use:	2	Percent of Treated Water

Chemical Data

Chlorine on hand:	22000	lb.	Est. supply:	20 days
Primary Coagulant (Ferric Chloride) on hand:	83765	lb.	Est. supply:	14 days
Cost of All Chemicals per Million Gallons:	*	dollars		
Total Power Cost per Million Gallons:	*	dollars		

Remarks

Number of filter confluence samples > 0.3 NTU:	3
Number of filter confluence samples collected:	350
Percent of filter confluence samples > 0.3 NTU:	0.86%
Number of filter confluence samples > 1 NTU	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? NO
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? NO
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? YES
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? YES*
If yes, indicate date(s) and duration on a separate sheet.

Distribution Disinfectant Total Residual Summary	
Percent samples with a detectable disinfectant residua	100
Average disinfectant residual this month	1.0

Cover Page Notes:

1. Filter head loss meters are not operational on our SCADA. They will be operational after our SCADA upgrades are complete. The SCADA upgrades are out for bid at the moment.

2. No cost analysis done for chemicals or power. An accurate chemical cost could not be determined due to polymer usage. We were given significant quantities (4-5 days) of polymer to use as a trial on two different occasions. No power cost was determined because I am trying to gain access to the correct monthly power cost.

3. POE continuous chlorine residual monitoring equipment has not been installed. We plan to move the continuous chlorine analyzer from the 3MG Well to the discharge side of the high service pumps. At this time we are taking residuals in the 3MG well, and using our lab tap to represent POE.

Report Notes:

1. Plant operations were shut down on 5/12 until 5/14. This was done to drain a softening clarifier and change plant set-up to test a new polymer. Storage reservoirs were utilized during this time.

MONTHLY OPERATION REPORT OF WATER TREATMENT PLANT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow	May 2014
Operator-in-Charge	Month/Year
F-1R, F-2	F-1
Certification of Operator-in-Charge	Water Plant Classification
Michael Glasgow	Genesee
Signature of Operator-in-Charge	County

Treatment Rate and Filter Data

Maximum Treatment Rate:	26.9	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	101	Hours
Average Head Loss:	*	Feet
Average Filtration Rate:	2.6	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.8	Gallons Per Square Feet per Minute
Average Wash Water Use:	2	Percent of Treated Water

Chemical Data

Chlorine on hand:	22000	lb.	Est. supply: 20	days
Primary Coagulant (Ferric Chloride) on hand:	83765	lb.	Est. supply: 14	days
Cost of All Chemicals per Million Gallons:	*	dollars		
Total Power Cost per Million Gallons:	*	dollars		

Remarks

Number of filter confluence samples > 0.3 NTU:	3
Number of filter confluence samples collected:	350
Percent of filter confluence samples > 0.3 NTU:	0.86%
Number of filter confluence samples > 1 NTU	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? NO
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? NO
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? YES
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? YES*
If yes, indicate date(s) and duration on a separate sheet.

Distribution Disinfectant Total Residual Summary	
Percent samples with a detectable disinfectant residua	100
Average disinfectant residual this month	1.0

Cover Page Notes:

1. Filter head loss meters are not operational on our SCADA. They will be operational after our SCADA upgrades are complete. The SCADA upgrades are out for bid at the moment.

2. No cost analysis done for chemicals or power. An accurate chemical cost could not be determined due to polymer usage. We were given significant quantities (4-5 days) of polymer to use as a trial on two different occasions. No power cost was determined because I am trying to gain access to the correct monthly power cost.

3. POE continuous chlorine residual monitoring equipment has not been installed. We plan to move the continuous chlorine analyzer from the 3MG Well to the discharge side of the high service pumps. At this time we are taking residuals in the 3MG well, and using our lab tap to represent POE.

Report Notes:

1. Plant operations were shut down on 5/12 until 5/14. This was done to drain a softening clarifier and change plant set-up to test a new polymer. Storage reservoirs were utilized during this time.

2310

MONTHLY OPERATION REPORT OF WATER TREATMENT PLANT

SUPPLY NAME: CITY of FLINT WATER PLANT
WSSN: 2310

Michael Glasgow — Operator-in-Charge
May 2014 — Month/Year

F-1R, F-2 — Certification of Operator-in-Charge
F-1 — Water Plant Classification

Michael Glasgow — Signature of Operator-in-Charge
Genesee — County

Treatment Rate and Filter Data

Maximum Treatment Rate:	26.9	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	101	Hours
Average Head Loss:	*	Feet
Average Filtration Rate:	2.6	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.8	Gallons Per Square Feet per Minute
Average Wash Water Use:	2	Percent of Treated Water

Chemical Data

Chlorine on hand:	22000	lb.	Est. supply:	20 days
Primary Coagulant (Ferric Chloride) on hand:	83765	lb.	Est. supply:	14 days
Cost of All Chemicals per Million Gallons:	*	dollars		
Total Power Cost per Million Gallons:	*	dollars		

Remarks

Number of filter confluence samples > 0.3 NTU:	3
Number of filter confluence samples collected:	350
Percent of filter confluence samples > 0.3 NTU:	0.86%
Number of filter confluence samples > 1 NTU	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? NO
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? NO
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? YES
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? YES*
If yes, indicate date(s) and duration on a separate sheet.

# of CFE samples per 4 HR Compl. period?

Very High!

can we get turbs off plants?

now got

start - 4 issues MW both 5 days but 5 of them only one 5 ntu

Distribution Disinfectant Total Residual Summary	
Percent samples with a detectable disinfectant residua	100
Average disinfectant residual this month	1.0

Cover Page Notes:

1. Filter head loss meters are not operational on our SCADA. They will be operational after our SCADA upgrades are complete. The SCADA upgrades are out for bid at the moment.

2. No cost analysis done for chemicals or power. An accurate chemical cost could not be determined due to polymer usage. We were given significant quantities (4-5 days) of polymer to use as a trial on two different occasions. No power cost was determined because I am trying to gain access to the correct monthly power cost.

3. POE continuous chlorine residual monitoring equipment has not been installed. We plan to move the continuous chlorine analyzer from the 3MG Well to the discharge side of the high service pumps. At this time we are taking residuals in the 3MG well, and using our lab tap to represent POE.

Report Notes:

1. Plant operations were shut down on 5/12 until 5/14. This was done to drain a softening clarifier and change plant set-up to test a new polymer. Storage reservoirs were utilized during this time.

Authority: Act 399, P.A. 1976

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of March 2014

Flint Water Plant — NAME OF WATER SYSTEM
2310 — WSSN
Genesee — COUNTY

Michael Glasgow — CERTIFIED OPERATOR
F-1R S-3 — CLASSIFICATION

Michael Glasgow — SIGNATURE OF APPROPRIATE OFFICIAL

DEQ
RESOURCE MANAGEMENT DIVISION
APR 14 2014
LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

Failure to complete this form is a violation of Act 399, P.A. 1976 and is subject to penalties as outlined in the Act.

MICHIGAN DEPARTMENT OF PUBLIC HEALTH

2310

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of February 2014

Flint Water Plant — 2310 — Genesee
NAME OF WATER SYSTEM — WSSN — COUNTY

Michael Glasgow — F-1R S-3
CERTIFIED OPERATOR — CLASSIFICATION

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

DEQ
RESOURCE MANAGEMENT DIVISION

MAR 13 2014

LANSING DISTRICT

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

MONTHLY OPERATION REPORT
OF
WATER TREATMENT PLANT

For Month of January 2014

Flint Water Plant — 2310 — Genesee
NAME OF WATER SYSTEM — WSSN — COUNTY

Michael Glasgow — F-1R S-3
CERTIFIED OPERATOR — CLASSIFICATION

Michael Glasgow
SIGNATURE OF APPROPRIATE OFFICIAL

TREATMENT RATE AND FILTER DATA

1. Treatment Rate, Maximum____ Million Gallons Per Day
2. Treatment Rate, Approved Rated Plant Capacity____Million Gallons per Day
3. Average Filter Run___ Hours, Average Head Loss _____Feet
4. Average Filtration Rate _____ Gallons per Square Ft. per Minute
5. Maximum Filtration Rate _____ Gallons per Square Ft. per Minute
6. Average Wash Water Use _____ percent of Treated Water

CHEMICAL DATA

7. Chlorine on hand _____ lbs.: Estimated supply _____ days
8. Lime (CaO) on hand _____ lbs.: Estimated supply _____ days
9. Alum (Al3+) on hand _____ lbs.: Estimated supply _____ days
10. Cost of All Chemicals per Million Gallons
11. Total Power Cost per Million Gallons

Remarks:

Submit to: Mike Prysby, P.E.
MDEQ-Water Division-Lansing District
P.O. Box 30242
Lansing, MI 48909

Failure to complete this form is a violation of Act 399, P.A. 1976 and is subject to penalties as outlined in the Act.

Flint WTP Start-up

On April 25, 2014 the Flint Water Treatment Plant (WTP), for the first time since 1967, began distributing drinking water to city residents with treated water from the Flint River. This accomplishment was made in part by a collaborative effort between the city of Flint, their consultants, and staff from the Office of Drinking Water and Municipal Assistance (ODWMA) and the Office of Waste Management and Radiological Protection (OWMRP) programs. This included rehabilitation of the WTP necessary for full-time operation, addressing problems with the disposal of treatment plant residuals, and oversight of plant operation and compliance monitoring.

ODWMA staff worked diligently with the city and their consultants discussing water plant design parameters and treatment requirements to helps assure an acceptable design. Staff was also aware of the city's concern over the expiration of their water service contract with Detroit and expedited comments/questions pertaining to the Act 399 permit submittals in a timely manner. Major rehabilitation components included upgrading treated water pumping capabilities, improving mid-treatment disinfection, upgrading electrical transformers and switchgear, and adding provisions for stand-by power generation. An Act 399 construction permit was issued on April 9, 2014 authorizing the city to proceed with the necessary improvements.

ODWMA staff also worked with staff from the OWMRP on establishing a path towards correcting un-resolved violations at the Bray Road sludge lagoon. Although, the existing sludge lagoon was the WTP's best alternative for temporary storage of lime sludge, the site historically fell victim to unauthorized disposal of solid waste (concrete debris and street sweepings) which resulted in the issuance of several violation notices from OWMRP. Separation the unauthorized disposal area from the sludge lagoon area, correction of an un-authorized discharge to a local surface water stream, and construction a new decant structure with discharge to the sanitary sewer were necessary to allow the WTP to discharge lime sludge at this location. The effort put forth by staff from both programs resulted in the issuance of a separate Act 399 permit for the specific improvements at the Bray Road sludge lagoon.

Continued oversight of the WTP leading up to the April 25th start-up confirmed adequate operation and compliance with the drinking water standards.

The WTP continues to maintain compliance with the drinking water standards and operating requirements. Both WTP operators and ODWMA staff maintain frequent contact concerning WTP operation and treated water quality. Monthly operation reports that convey important treatment plant operating parameters, including the microbial integrity of the treated water, are reviewed by ODWMA to assure compliance. Additional WTP inspections have been conducted to review and discuss the monthly reports and to observe the treatment process. ODWMA also worked the WTP operators on establishing a new water quality monitoring schedule based upon the change in the source of water supply. The new schedule will assist WTP operators in maintaining compliance with the monitoring requirements established in the Michigan Safe Drinking Water Act.

Subject: Flint OEL - MDEQ Comments
Attachments: March 1st, 2015 OEL Report - DEQ Comments.doc

Jeff,

In looking at some of the Flint TTHM material for tomorrow's TAC meeting.....I noted our March 1, 2015 comments pertaining to the most recent Operation Evaluation Report prepared for Flint. I didn't see an electronic "sent date" to you on this document. It may be that I hand delivered our comments to LAN during our first TAC meeting on March 4th. If not, attached are our comments and I apologize in the delay. These comments can be addressed in the next report due on May 29, 2015.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

City of Flint
Operational Evaluation Report
March 1, 2015
MDEQ Comments

1. Revise Tables 2 and 3 on Page 7 to account for proper alignment of DDBP samples (results, location, site code). Also, revise statement on Page 1 regarding the number of sites exceeding the TTHM MCL following the 4th quarter sample cycle.

2. The ozone system was recently repaired. (Page 10 & 19). What is the ozone system's current production rate?

3. The city's hydraulic model (prepared by Potter Consulting) is being updated (Page 16). Is the model currently sufficient in determining proper sizing for the transmission main replacement in DuPont & Bishop Street corridor? (currently sized at 24-inch) (Pages 5, 16, and 20)

4. Are the potassium permanganate results & conclusions available? (Pages 4 and 17)

5. We agree that some reduction in storage volume could be achieved without compromising reliability; however given high usage, main breaks, and "let runs" during the winter, storage volume remains important. We agree with the need to determine adequate storage volume which will likely differ between summer and winter. (Page 15)

6. We agree with the concern of re-circulation of water pumped from the booster pump stations; however, we were recently informed of existing distribution system check valves to prevent recirculation. These appurtenances and their condition need to be confirmed. The hydraulic model may also need to be updated to include these valves. (Page 15)

7. We concur with the recommendation to provide the ability to monitor raw water TOC and PTAP TTHM. (Pages 17 & 18)

8. Page 20 provides 2 options to manage water age and each option includes reducing the utilized storage volume of the 3 MGAL well to 2 MGAL. The reduction in storage volume limits the WTP's ability to meet CT under worst case conditions (low temp, high pH, 30 MGD pumping rate from reservoir).

9. Table 11 on Page 21 outlines an Action Plan for Stage 1 and Stage 2 actions. Several actions listed in Stage 2 including; repair of ozone system, continued valve replacement, and replacement of deteriorated watermains are longer term solutions; however, they need to proceed regardless of the outcome of TTHM reduction.

October 9, 2015

Hello Samir...

Thank you for your time on the phone. As promised, I'm sending you some information on our phosphate product, SeaQuest.

SeaQuest is a Phosphate blend made exclusively from 100% North American food grade poly and orthophosphates, with no fillers whatsoever. Our product is thoroughly documented and is the most stable, blended phosphate product available that effectively works in a wider pH range (5.5 through 12) and temperature range (only a 5% reversion in 250 degrees F) than any other phosphate on the market. SeaQuest provides a mono molecular coating which unlike any other phosphate, bonds with pipes and will lower lead and copper numbers even in extreme cases such as in desalinated water systems.

SeaQuest will completely sequester soluble hardness without precipitation in pipes or home water heaters, reduces calcium scale hardness and corrosion in the pipes through a gradual cleanout, increases chlorine residuals while decreasing chlorine usage (typically from 10% - 20%) and removes biofilms on both plastic and metal pipes, to name a few of our benefits.

SeaQuest is the only third generation phosphate technology and provides advantages not found with any other phosphate product. Our NSF Certified phosphate corrosion inhibitor is the only phosphate technology that has been independently written about and presented twice at the Water Quality Technology Conference of AWWA (1999 and 2007). SeaQuest is also the subject of numerous additional independent studies and professional Papers including a front page article in Op Flow Magazine (January, 2003).

I'm attaching some Case Histories which should give you a better sense of some of what SeaQuest can provide. I would be available to set up an appointment at your convenience either during the first or second week in November.

Thank you. I appreciate your time.

Respectfully,

Michael Edelstein

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

RICK SNYDER
GOVERNOR

DAN WYANT
DIRECTOR

December 12, 2014

Mr. Brent Wright, Operation Supervisor
City Of Flint - DPW
Flint Water Plant
4500 North Dort Highway
Flint, MI 48505

WSSN: 02310

Dear Mr. Wright:

SUBJECT: Violation Notice – Maximum Contaminant Level for Total Trihalomethanes
Operational Evaluation – Total Trihalomethanes
3rd Quarter 2014

The Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA), records show that the City of Flint is in violation of the Safe Drinking Water Act,1976 PA 399, as amended (Act 399); R 325.10610, *Maximum contaminant levels* (MCL) *for disinfection byproducts*, of the 1979 Administrative Code.

In accordance with R.325.10610, *MCLs for disinfection byproducts*, of the 1979 Administrative Code, the MCL for disinfection byproduct total trihalomethanes (TTHM) is 0.080 milligrams per liter (mg/L) as a Locational Running Annual Average (LRAA) at each monitoring location. As listed in the table below, our records show that the City of Flint's highest TTHM locational running annual average (LRAA), based on the last three quarters ending November 30, 2014, is 0.099 mg/l which exceeds the standard, and that two of the eight sample site locations exceed the standard of 0.080 mg/L.

Further, in accordance with R325.10719l, Disinfection byproducts: operational evaluation levels, of the 1979 Administrative Code, when an operational evaluation level (OEL) at a monitoring location for TTHM exceeds 0.080 mg/L, a supply shall conduct an operational evaluation and submit a written report of the evaluation to the department not later than 90 days after being notified of the analytical result that causes the supply to exceed the operational evaluation level. As listed in the table below, our records show that TTHM operational evaluation levels for the City of Flint exceed 0.080 mg/L, at four of the City's eight sample site locations.

TTHM Results (mg/L)					
	5/21/14	8/21/14	11/20/14	LRAA	OEL
DBP1 McDonalds 3719 Davison	**0.162**	**0.145**	0.059	**0.092**	**0.106**
DBP2 Liquor Palace 3302 S. Dort Highway	**0.112**	**0.127**	0.033	0.068	0.076
DBP3 North Flint Auto	**0.097**	**0.118**	0.041	0.064	0.074

6204 N. Saginaw St.					
DBP4 University Market 2501 Flushing Road	**0.106**	**0.196**	**0.094**	**0.099**	**0.122**
DBP5 Taco Bell 3606 Corunna Road	0.079	**0.181**	0.034	0.074	**0.082**
DBP6 Rite-Aid Pharmacy 5018 Clio Road	**0.088**	**0.144**	0.054	0.072	**0.085**
DBP7 Salem Housing 3216 MLK Boulevard	**0.082**	**0.112**	0.050	0.061	0.074
DBP8 BP Gas Station 822 S. Dort Highway	0.075	**0.112**	0.036	0.056	0.065

Our investigation consisted of a review of ODWMA files for laboratory reports received for compliance monitoring. Our investigation is considered complete. This violation began on December 1, 2014, and will continue until TTHM LRAA is below the MCL at all sample sites.

Water systems who exceed the OEL must complete and submit an Operational Evaluation in accordance with Administrative Rule 7191(R325.10791) within 90 days since the start of the violation. We acknowledge the city's collaborative effort with our department towards preparing an Operational Evaluation several months prior to OEL exceedance and submitting a draft report. The draft report identifies possible causes and corrective measures for the elevated TTHM levels. We also acknowledge that the city has implemented some of these measures including improved distribution system operation and softening the entire treatment plant flow and has likely attributed to the reduction in TTHM levels in the most recent quarter. The city is encouraged to continue working with their consultant towards implementing additional TTHM reduction measures identified in the draft report. We will review the draft report and provide comments as needed towards assisting the city in this endeavor. The Operational Evaluation report needs to be completed and received by our office by no later than March 1, 2015.

If you have any factual information you would like us to consider regarding the violation identified in this Notice, please provide them in a written response by January 12, 2015.

Administrative rule R 325.10403 of Act 399 requires that suppliers provide public notice as soon as practical but no later than thirty (30) days after the supplier learns of the violation, by mail or direct delivery **and** by any other means reasonably calculated to reach customers not normally reached by mail. Enclosed is a sample public notice (PN) which contains the minimum required language. The City is encouraged to provide additional information regarding its response to this violation. **Please notify your consumers by January 10, 2015, and send us a signed and dated copy of the notice that you issued within ten (10) days of distributing the public notice**. This violation must be included in your Consumer Confidence Report (CCR,) due by July 1, 2015. The public notification must be repeated every quarter until you no longer exceed the TTHM standard. **Failure to issue a PN for this violation will result in a fine of at least $1,000 per event, with a maximum of $5,000 per violation.** Contact our office for a more complete summary of our fines policies.

We anticipate and appreciate your cooperation in resolving this matter. If you have any questions regarding this Violation Notice, please contact us at the numbers below.

Sincerely,

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (May 21, August 21, and November 20 of 2014). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the MCL. The standard for TTHMs is 80 µg/L. The location reporting the highest TTHM level was 99 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. These people may be at increased risk and should seek advice about drinking water from their health care providers.
- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem by 2015.

For more information, please contact Mr. Brent Wright at 517-787-6537 or the Flint Water Plant at 4500 North Dort Highway, Flint, MI 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

Signature	Title	Date Distributed

Reminder to water supplier: This notice / certification must be sent to the DEQ.

Attachments: TTHM Reduction measures.doc

Steve,

I spoke with WTP staff (Brent and Mike) and the WSC (Robert Binscik) to confirm the proactive measures taken by the city; thus far, towards reducing TTHM levels. Attached is a brief summary.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

TTHM Reduction
Action taken by City
December 16, 2014

Flint's 3rd quarter of TTHM monitoring (Nov 20th, 2014) shows a reduction in TTHM levels at all of the sampling locations. The reduced TTHMs are the combined result of seasonal variation of total organic carbon (TTHM precursors) in the raw water and action taken by the city towards reducing TTHM levels. The amount of reduction contributed by each factor cannot be determined; however, the following is a list of proactive measures taken by the city in their effort to reduce TTHM levels.

1. **Removed the 20 MGAL Dort Reservoir from service**.

   The reservoir allowed treated water from the WTP to re-circulate back to high service thus adding up to one week of retention time.

2. **Softening 100% of the WTP flow during normal plant operation**.

   Softening the complete flow reduces the chlorine demand. During high water demands (large main breaks, filling reservoirs), split treatment must be utilized due to VFD control problems with the 20 MGD low service pump; however, split treatment is no longer the WTP's main mode of operation.

3. **Improved turn-over of water in distribution system reservoirs.**

   The operating range of the Cedar Street and Westside reservoirs was increased from 1-2 ft. (summer) to approximately 10 feet. The increased drawdown has reduced residence time and improved chlorine residuals.

4. **Established a more proactive flushing program.**

   Increased flushing reduced residence time in the distribution system especially at dead-ends.

5. **Optimizing Transmission System Operation w. repair of major valves and confirming proper valve position.**

   Several critical valves were replaced on one of Flint's four major transmission mains and several other valves (found to be closed) were opened. This eliminated stagnation problems in areas near this main, improved chlorine residuals and allows the main to operate in a looped configuration.

   Action to be taken soon:

- **LAN treatability study – jar testing (Starting this week)**
- **Trouble shoot Ozone system – early January**
- **Disinfect filters – after the next "top-off" of system reservoirs**

Subject: Fwd: Question re emergency service requirements

Steve,
On AL today...saw Liane's message and will respond first thing Monday...I recall we were not requiring GCDC to establish back up with Detroit provided that they could demonstrate adequate redundancy on their own... Which it seems like they are planning based on their prelim design of the raw water reservoir, back up wells, and back up from Flint.

Attachments: Act 399 Capacity and Reliability Requirements.pdf

Liane,

Attached is our letter we sent to the city of Flint concerning emergency service requirements. Flint meets the required capacity under R 325.110204 and ability to provide water during electrical power interruptions under R 325.11206. Although additional emergency interconnections with other public water supplies are not required based on Flint meeting the above requirements, we encouraged the city to maintain all possible interconnections for emergency purposes. Steve & I anticipate that we have maintain the same position with Genesee County when they are treating water purchased from KWA. If you wish to go over any specifics prior to the call, I am available to meet with you prior to 10:30 (10:00 or 10:15).

RICK SNYDER
GOVERNOR

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

DAN WYANT
DIRECTOR

April 29, 2014

Mr. Daugherty Johnson, Utilities Administrator
City of Flint
1101 South Saginaw Street
Flint, Michigan 48502

WSSN: 02310

Dear: Mr. Johnson

Subject: Act 399 Capacity and Reliability Requirements

This letter, per your request, is being written as verification that the City of Flint water system is currently in compliance with required capacity and power service reliability requirements under the Michigan Safe Drinking Water Act and Administrative Rules, Supplying Water to the Public.

The required capacity of a waterworks system as established in Rule 1204 (R 325.11204) required sufficient capacity to meet approved finished water supply requirements, and is based upon the combination of the following options:

a. Rated capacity of an approved surface water supply or complete treatment system;
b. Firm capacity of approved groundwater supply;
c. Available contracted capacity that can be delivered from another public water supply;
d. Excess finished water storage capacity.

Under the first option listed above, the City's baseline water withdrawal capacity from the Flint River, and rated capacity of the City's water treatment plant (WTP), both exceed its finished water supply requirements. The rated capacity of a complete treatment system is established under Rule 1006 (R 325.11006). In accordance with this rule, the Department of Environmental Quality (DEQ) has established a rated capacity of 36 million gallons per day for the City's WTP, which again far exceeds current and future finished water supply requirements for the City's service area.

In addition, while capacity under item d above for excess finished water storage has not been established, the City currently has enough finished water storage to supply more than 2 days of normal finished water supply requirements

Rule 1206 (R 325.11206) requires water systems to provide a means to continuously supply fully finished water during normal power service interruption. The City's WTP is now equipped with a redundant electrical system that includes provisions for stand-by power generation; thus meeting this requirement.

While additional means to meet the above requirements for capacity and power interruption can be provided through contracted interconnections with other water systems, the City has demonstrated compliance with these requirements without such means. However, the DEQ still supports and encourages such interconnections be maintained for emergency purposes as an additional barrier to help maintain public health protections. While these emergency

interconnections have no requirement to establish an available or contracted capacity, the DEQ encourages the corresponding utilities to establish mutual aid agreements where possible. Such agreements can be developed through the Michigan Water/Wastewater Agency Response Network (MiWARN). For more information, please visit miwarn.org. A MiWARN brochure is also enclosed for your information.

If you have any questions, feel free to contact me at (517) 290-8817; prysbym@michigan.gov; or Department of Environmental Quality, Office of Drinking Water and Municipal Assistance, Lansing District Office, 525 West Allegan Street, 1st Floor South, P.O. Box 30242, Lansing, Michigan 48909-7742.

Sincerely,

Michael F. Prysby, P.E.

Hi Mike,

I just left you a voicemail but thought you may check your email first. We just received a request from recently elected Rep. Neeley's office asking us to come over TODAY to discuss Flint drinking water.

Are you available at all this afternoon to go over with Richard and me? Please let me know as soon as possible.
Thanks,
Sarah

Sorry—Just getting to today's emails.

I didn't get the name of the other individual either. It's not a big deal, though. Thanks for the write-up!

Also, I mentioned to Richard yesterday on the elevator, if you guys could get me a copy of any correspondence that we send to the City of Flint on this issue or a heads up on if anything "big" is going to happen, that'd be great. I'll pass it on to the Reps.

Thanks again,
Sarah

Sarah,

I appreciate the opportunity to present information to the state reps that cover Flint regarding the TTHM violation.

I'm writing a brief summary for LDO management. Rep. Sheldon Neeley, 34th District provided me his card; however, I did not receive cards from the other two participants.
I recall Mr. Phelps being the other Rep. ; however, I don't know the District # he represents. Finally, I do not have the name & title of the third person. If you could provide that to me, that would be appreciated as I will need to reference them in my summary to LDO management. Thanks!

Flint Water Advisory

Date/Time:

Effective Wednesday, January 7, 2015

Details:

The City of Flint recently sent out the attached notice regarding violations to the drinking water standards. While the City of Flint states that corrective actions are not necessary, DTMB is in the process of providing a water cooler on each occupied floor, positioned near the water fountain, so you can choose which water to drink. The coolers will arrive today and will be provided as long as the public water does not meet treatment requirements.

Mike,

You need to draft a response that says pretty much what you say below but in a format (letter) that can be used to provide a response to Ms. Warner from someone probably higher up the chain. I assume Joanne can assist you in identifying the appropriate format.

Veronica,

Can you tell from the attachment you sent (DIR00004) whose signature Mike should be preparing this response? All I see is the initials "RD." Will Mike be signing it or will it be someone else?

Also, since we did not receive this request until the afternoon of January 9th, is it possible we may have a week to respond, making the due date January 16th? Mike has his hands full with all of the demands placed on him by the ongoing issues in Flint.

Richard

Subject: RE: DIR00004 Warner / Water toxins in Flint MI

Veronica,

I contacted Ms. Patricia Warner and gave her the opportunity to ask me questions and/or voice concerns with the TTHM violation in Flint. Her main complaint, most common complaint across the board, is the high cost of water Flint residents are paying yet receiving water of poor quality. Another concern she voiced was the city's delay in notifying the public of increased TTHM levels. She and others feel the city should have notified residents last May when high TTHM levels were first detected.

I explained to Patricia some of the possible reasons for the increase in water rates included.... improvements needed at the WTP (necessary for full-time operation both for KWA and Flint River operation) and the cost of infrastructure to connect to KWA. The financial commitment to KWA may also be factored into increased costs; however, I stressed that the city needs to work harder at educating the public on why the water rates were increased. With regards to PN requirements, I explained how the TTHM exceedance for Flint is determined (running annual average) and the PN requirement. I stressed that...although the city has met all of the monitoring and PN requirements for this violation, it may be worthwhile for them to convey the status of TTHMs ahead of state and federal reporting deadlines as a means towards regaining public trust. I also provided technical information pertaining to TTHMs and discussed the health-effects in more detail. The duration of the call was a half hour and Patricia seemed satisfied with my response to her questions/concerns. I offered her the opportunity to call me again if she has any further questions.

If any further action is needed regarding this inquiry, please let me know.

Richard,
I requested a copy of Flint's water rate schedule...of which they provided...based on our calculation...the water bill for a family of four using 1000 cuft (7500 gal) on a monthly basis having a 5/8" meter would be approx. $98. The bill will be $20 higher for a 3/4" meter. So I could see a family of 6 with leaking fixtures and a larger meter size seeing a monthly bill in this range. I can provide u with a copy of their rate schedule tomorrow.

> Thanks for the update, Richard. The numerous people I talk to from Flint say their water bills are between $175-$200/month. Would DWSD have raised their rates that high? (Don't answer that; just pure conjecture ☺) I talked with a woman yesterday, whose pediatrician swears there has been an increase in kidney stones in his patients since April. I told her to have the pediatrician contact CDC in Atlanta. (I prepared a briefing this summer for ATSDR/CDC about the physical ailments people were complaining about to me, but without any expert or documentation, they didn't pick it up.) Talked to another man yesterday that's mounting a campaign to stop paying their water bills, and wants to organize against the City. And on it goes...

Still going on – even some council members talking about going back to Detroit at least until the KWA pipeline is available sometime in 2016. I don't know that the newspapers or media are advocating for one side or the other in this issue, but covering those individuals who are keeps the flames flickering.

I can't say the city wouldn't be better off to not have switched to the River, but I believe Flint was sure that DWSD was going to raise water rates significantly after the contract expired (by decree of DWSD) in order to recoup lost bonding costs or something similar. Flint did not want to be subjected to rates without any contractual controls.

Steve,

Attached is the letter to Ms. Warner that summarizes my call...routed to us from DCH ...since Ms. Warner contacted them first. I tried to attach the boiler plate opening and closing paragraphs that Joanne provided me; however, my link to the scanned documents won't connect. I you need to look at the boiler plate paragraphs, I can have Joanne email it to you. I will also forward you (in a separate e-mail) the original assignment from Veronica that shows the e-mail thread beginning with DHC...to verify that all the appropriate staff are being copied.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

RICK SNYDER
GOVERNOR

DAN WYANT
DIRECTOR

January 14, 2015

{PRIVATE }

Ms. Patty Warner
2721 Coventry Court
Flint, Michigan 48503

Dear Ms. Warner:

SUBJECT: City of Flint – Water System, Total Trihalomethane (TTHM) Maximum Contaminant Level (MCL) Violation

Thank you for your e-mail of January 6, 2015, to Ms. Nancy Grijaiva in the Director's Office of the Michigan Department of Community Health (DCH). Your e-mail was referred from DCH to the Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA) for response.

District staff from the ODWMA contacted you on January 9, 2015 to address your concerns regarding the TTHM MCL violation of Flint's drinking water. The main concerns discussed included unacceptable quality of the drinking water at a high cost to Flint residents and the perceived delay in notifying residents of the TTHM MCL violation. Some of the factors contributing to the formation of TTHMs in the water distribution system were also discussed.

District Staff explained the need to complete capital improvements at the water treatment plant in order to treat water from the Flint River and to be ready for operation when water from Lake Huron via the Karegnondi Water Authority (KWA) becomes available. Also, the cost of committing to KWA and the infrastructure being installed are the main factors likely contributing to increased water rates. Staff stressed; however, that the city is responsible to inform their residents, in more detail, as to how the most recent water rates were established as a result of the expenditures made to proceed with the work described above.

District Staff also explained how the city's water distribution system storage reservoirs were kept full, with minimal cycling, while purchasing water from Detroit. This method of operation provided the city with several days of emergency storage in the event of an interruption of water service from Detroit (source via single pipeline). Although excess storage benefited the city while purchasing water from Detroit without causing additional TTHM formation, stagnant conditions within the reservoirs contributed to additional TTHMs after the city switched to the Flint River. The city has since changed their operating methodology of these reservoirs which has alleviated the stagnation.

District Staff confirmed that the city met the public notification requirements and the associated deadline to notify residents once the TTHM MCL violation became established. Establishment of the TTHM MCL violation is based on the running annual average on a quarterly basis; thus, the city was not in violation of the TTHM MCL until three quarters of monitoring were completed (November 2014). It wasn't until after the MCL was exceeded that the city was required to post the public notice. Although the city met all DEQ's TTHM monitoring and reporting requirements, it may be worthwhile for the city to convey the status of TTHMs to the public ahead of DEQ's reporting deadlines to help improve public relations.

If you need further information or assistance, please contact Mr. Michael Prysby, District Engineer, ODWMA, DEQ at (517) 290-8817,

Sincerely,

Stephen Busch, P.E.
District Supervisor

OPENING PARAGRAPH (Continued)

BUREAU/DIVISION/OFFICE CHIEF/ASSISTANT DIVISION CHIEF'S SIGNATURE:

Thank you for your January 2, 2009, letter to Governor Jennifer M. Granholm regarding odors from the Algonac Wastewater Treatment Plant near your home. Governor Granholm has referred your letter to the Department of Environmental Quality (DEQ) for response.

Thank you for your letter of January 2, 2009, to United States Representative John D. Dingell expressing concern with sewage backups in basements in Gibraltar. Representative Dingell has forwarded your letter to the Department of Environmental Quality (DEQ) for response.

Thank you for your February 3, 2009, letter to Director Steven E. Chester concerning Pall Gelman Sciences, Inc. Director Chester has referred your letter to the Waste and Hazardous Materials Division (WHMD) for response.

Thank you for your letter of February 13, 2009, to Mr. Jim Sygo, Deputy Director, regarding funding for removal of underground storage tanks. Mr. Sygo has forwarded your letter to the Waste and Hazardous Materials Division (WHMD) for response.

Thank you for your January 10, 2009, letter to Ms. Carol Linteau, Legislative Director. Ms. Linteau has asked the Remediation and Redevelopment Division (RRD) to respond to your concerns regarding a remediation site in your district.

Thank you for your e-mail of February 1, 2009, to Director Steven E. Chester concerning mining in the Upper Peninsula. Director Chester has referred your e-mail to the Office of Geological Survey (OGS) for response.

LETTER BODY

Make sure all questions, concerns, and issues stated in the incoming correspondence are addressed. If detailed information is provided, use the name of the staff person who gathered the information. Letters that require a lengthy, detailed response shall be prepared as a staff report or another similar format as applicable, with a cover letter for the director's or Executive Division staff signature (see page 47). Italic type is now the preferred means of giving special emphasis to words and phrases instead of bolding or underlining.

Ron,
I am out of the office till next Tues; however, I am taking the opportunity to answer your question concerning qualification (certification requirements) for the Flint WTP. The city of Flint (WTP) is required to designate an Operator In Charge (OIC) holding an F-1 drinking water license. The F designation stands for Complete Treatment and the 1 designation stands for the level (based on pop served, greater than 20,000). Flint meets this requirement. Flint must also have a shift operator available having at least an F-4 license to cover shifts when the OIC is not present. The city employs numerous operators holding F-4, F-3, and F-2 licenses; thus, the city meets MDEQ's operator certification requirements.

DBP8 BP Gas Station 822 S. Dort Highway	0.038	0.040	0.021	0.025

Locational running annual average (LRAA): the average of sample analytical results for samples taken at a particular monitoring location during the previous four calendar quarters.

Maximum contaminant level (MCL): the maximum permissible level of a contaminant in water which is delivered to any user of a public water system.

The Stage 2 Disinfection By-Products Rule (DBPR) requires systems to meet an LRAA of 0.080 mg/L for TTHM and 0.060 mg/L for HAA5 at each compliance monitoring location.

In answer to your questions below:

1.Our sampling was done at 4 locations within the Flint city water system on Tuesday, January 20th, between 10:40am for our first location and 3:40 pm for our last location. They were not the same sites used for Flint's stage 2 DDBP monitoring.

2. I collected the samples after receiving instruction from our the independent certified testing lab we used. City certified operators did not collect or oversee the collection of our samples.

3. Sampling protocol: Run tap for 1-2 minutes.
Samples were collected in a 40 ml VOA vial with sodium thiosulfate as a dechlorinating agent. Samples were collected with zero head space. VOC's used 40 ml VOA with ascorbic acid then adding hydrochloric acid with zero head space. All other tests wereMDPE containers except bacteria samples were in specific BACTI containers.

4. Lab used was Water Tech in Howell, ID#0023

5. Method used is EPA524.2 (see above for sampling unit) or as specified on the report.

Please let me know if you can comment on our results. **I would only provide them to you with the agreement that keep them completely confidential and not release them to anyone before our embargo time of Friday, January 30th at 7 AM.**

Larry,

We are willing to review the TTHM results of all samples collected within the Flint water system for a limited assessment of the data. Please include the following information with the sample results:

1. Sampling location /time – was Flint's Stage 2 DDBP monitoring plan sites used?
2. Who collected the samples? Did city certified operators collect the samples or oversee the sample collection?
3. Sampling protocol (method)
4. Certified lab used
5. Lab method used & proper sampling unit

Mike,
We have just completed our own independent testing of multiple sites within the Flint water system and wonder if you'd be willing to look them over and give us your professional opinion.
I could email you the reports from the testing lab we used.

> > According to our folks, Genesee County has been using DWSD water without a contract for years. But Flint took the letter to imply a water cutoff, and promptly turned to DEQ with a proposal to use the Flint River (their historic backup system).
> >
> > This proposed shift put the city in the business of water production, where they historically had been in the business of water transmission. DEQ approved the use of the river as a source, believing that with the proper conditions it could be managed. Several municipalities around the state use surface water supplies (rivers): Blissfield near Monroe, Manistique, and Alma to name a few.

The city constructed the facility and DEQ approved it April / May 2014.

There were some initial hiccups. Last summer, there were a couple of 'boil water' notices issued. One for a water test that showed e. coli, one for a break in the water main.

The challenge to using the Flint River as a source is that the condition of the water is variable and changes with season and weather. It has substantially more organic matter than deep lake sources like Lake Huron. This organic matter is mobilized by high water events, and warm weather also can account for more organic material in the water.

The treatment of the organic matter is done with chlorine. One might conclude that the perennial answer is just to use more chlorine to achieve water safety. However, at some point on the continuum, the chlorine and organic matter create TTHM – total trihalomethanes – as a byproduct. When the standard for those is exceeded over several consecutive quarters of testing, the operator of the system is required by law to issue public notice and submit an approved plan for addressing the situation.

You'll note that this regulatory approach means TTHM testing is done quarterly. That means people who use the system are exposed to TTHM for several months before the public notice is required. It's because TTHM is a chronic health threat. Over the long term (measured in decades), continued exposure can contribute to some known health problems. Put in context, the EPA (who established the standard and the rule) estimates this rule prevents an estimated 280 bladder cancer cases each year … out of more than 330 million people who use public water supplies around the country.

It's not nothing. State and federal law requires quarterly testing for TTHM and that the public be informed of it when three quarters' worth of consecutive testing shows elevated TTHM levels, and they must develop a plan to address it. But it's not like an eminent threat to public health like e. Coli or even coliform bacteria, which require immediate public notification and response and are part of daily / hourly testing of public water supplies.

It's clear the nature of the threat was communicated poorly. It's also clear that folks in Flint are concerned about other aspects of their water – taste, smell and color being among the top complaints.

The Safe Drinking Water Act requires public water supplies be tested for more than 90 toxins and pathogens. The act, and the program here in Michigan, work to ensure that water is safe to drink. The act does not cover aesthetic values of water. Here are some factors affecting the aesthetics of water in Flint.

1. It's the Flint River. The water supplied by DWSD historically came from Lake Huron. It's softer. With hard water, you get a different flavor and feel. It's why General Motors suspended use of Flint Water – it was rusting their parts. Also, there's the 'organics' factor (discussed previously).

2. The system is old. Flint has more than 500 miles of water pipes. More than half of those pipe miles are more than 75 years old. Much of it is cast iron. Hard water hits cast iron and exacerbates the rusty factor, which creates that brown water that angry residents were holding up in jugs for the media cameras last week. Valve failure has also been a key challenge. The system has an estimated 7,500+ valves. When they stick open or stick shut, it affects the hydrology of the system. Water can stagnate in pipes. The city has a backlog of valves that need to be addressed. They've done half a dozen or so since November.

3. Flint is old. Many of the homes served by the system are old. Residents who are getting brown water may have aged, cast iron pipes in their service connection to the city lines. The DEQ has been encouraging people with water coloration concerns to contact the city and see whether it is the service line or the City's line causing the issue. Again, discoloration is not an indicator of water quality or water safety, but we recognize that nobody likes it.

In summary, the City of Flint has tremendous need to address its water delivery system. We are not aware that they have any Capital Improvement account in place to set aside maintenance funds, much less line replacement project monies that will

require hundreds of millions. The City was approved for a Revolving Fund loan in 2008 or 2009. As a Distressed Community, they qualified for flexible terms and 2 percent increase. After they were notified they were approved for the loan, they declined it. Previous SRF loans from the state to Flint bear an outstanding balance of $20.7 million today.

The DEQ continues working with the city to address the TTHM issue. They can take interim steps – from scrubbing the insides of transmission lines to carefully monitoring the hydrological challenges in their system – to address customers' aesthetic concerns. Their TTHM numbers already are showing dramatic improvement; the November testing showed only one of seven sample points exceeding the standard. The key now is that the standard is an average of three quarters' worth of results. It will be some time before they are officially "not in violation." However, depending on weather in 2015, it's not unforeseeable that we will be having this conversation again by next Christmas.

The key to the conversation is that TTHM is not a top health concern. That's key because residents need to understand TTHM in context, and it is key because it appears the mayor has seized on the public panic (sparked, frankly, by their poor communication of the violation notice) to ask the state for loan forgiveness and more money for their infrastructure improvement.

Another key thing to remember is that once the city connects to the new KWA system in 2016, this issue will fade in the rearview.

Until then, our top messages:

1. The DEQ Drinking Water program works with communities around the state to ensure that municipalities provide customers with clean, safe drinking water.
2. Municipal water supplies are tested rigorously and regularly for more than 90 toxins and pathogens.
3. Flint's exceedance of the TTHM standard should reassure residents that the testing program is effective.
4. TTHM is not an immediate health threat. It is a chronic concern, one that can be problematic over the course of

many years. The public was notified because the law requires the city to make public notification, so that everyone can make informed decisions. This is particularly true for people with infants or those with compromised immune systems.

5. The DEQ is working with the City to address the situation. Recent tests show the TTHM numbers dropping rapidly. The department will continue working with the city in the months ahead, and residents should feel confident that their water is safe to drink unless the DEQ or City notifies them otherwise.
6. The discoloration and odor issues some Flint residents are experiencing are separate issues from the TTHM issue. TTHM is odorless, colorless and measured in parts per billion.
7. Flint water customers who have questions or concerns about their water should first contact the city to get answers and help. They also can contact the Michigan DEQ at ********** (web or phone address?)

> > **Subject: Flint event on Tuesday**
> >
> > Good afternoon team,

Just wanted to touch base on Tuesday's event in Flint. Unless told otherwise, I'm continuing to prepare for the event.

I touched base with Harvey and Stacie, who recommended we proceed. Harvey is approaching some stakeholders about appearing at the event, and will forward those names to me later today.

I left a message with Dick Posthumus to see if he has any concerns about proceeding.

The Senate Democrats said Sen. Ananich will want to appear. Katie Carey from the House said she would forward information to Rep. Neeley and Phelps. I have not heard back from her yet.

I've attached the backgrounder and the draft releases from Governor's Communications and Treasury. I've sent a message to the mayor's office about a quote, but have not heard back yet.

Brad and I spoke about Director Wyant's role and potential comments. He will point out that there are things the state can do to help monitor the situation, but also will note that the city's water infrastructure is aging, which contributes to the problems.

We need some direction on an advisory. Should this be listed on a typical advisory from the governor's office, or come from Treasury? Do we even issue an advisory in favor of just contacting media directly in the morning?

Please give the draft releases a read for potential changes, or let me know of other concerns.

Thank you!

Dave

Elizabeth,

Below is a link to our website that lists all of surface water systems in Michigan. You will need to scroll down to the bottom of the list to see the listing of supplies using a river as their source. Also, I am not aware of any source water assessment conducted for the Flint River watershed; however, I would like to confirm that. I will let you know asap once I obtain the confirmation.

Subject: Source Wster assessment Flint River

Jason,

Has a source water assessment been performed for the Flint River watershed...spec. for the Flint WTP intake? If so, the city of Flint would like to obtain a copy of source water assessment report.

Elizabeth,

Attached is a copy of the Flint River Source Water Assessment report for your information. Water treatment plant staff should have a copy of this report, if not, please provide them with a copy.

Source Water Assessment Report for the City of Flint Water Supply Flint River Emergency Intake February 2004

City of Flint Water Treatment Plant, Flint, Michigan

Prepared for:

City of Flint Water Supply; WSSN 2310

Prepared by:

U.S. Geological Survey, Water Resources Division, Michigan District
Michigan Department of Environmental Quality, Water Division
City of Flint Water Utilities Department

Michigan Source Water Assessment Report 54

Executive Summary

The purpose of the Source Water Assessment is to analyze the sensitivity and determine susceptibility of a community's source of drinking water to potential sources of contamination.

Sensitivity is determined from the natural setting of the source water (raw water to the water treatment plant), and indicates natural protection afforded the source water. Using procedures established in the Great Lakes Protocol, Michigan Source Water Assessment Program, the ***emergency*** *intake for the Flint Water Treatment Plant has a very high degree of sensitivity to potential contaminants. When the effects of agricultural and urban runoff in the Flint River watershed are considered, the Flint intake is categorized as very highly sensitive.*

Susceptibility identifies factors within the community's source water area that may pose a risk to the water supply. The susceptibility determination provides information with respect to listed facilities and land areas within the source water area that should be given greater priority and oversight in implementing a source water protection program. The source water area for the Flint ***emergency*** *intake includes 96 potential contaminant sources, 16 listed potential contaminant sources within the susceptible area, plus urban and agricultural runoff from the Flint River watershed into the Flint River. The potential contaminant sources, in combination with the very highly sensitive intake, indicate that the Flint* ***emergency*** *intake source water is very highly susceptible to potential contamination.*

The Flint ***emergency*** *intake source water is categorized as very highly susceptible, given land uses and potential contaminant sources within the source water area. However, it is noted that when operating, the City of Flint Water Treatment Plant has effectively treated this source water to meet drinking water standards. The City of Flint has instituted pollution prevention programs, but should be cognizant of additional potential threats to its source of drinking water that are identified in this report. This report explains the background and basis for these determinations.*

Using this Assessment

Clean, safe drinking water is fundamental to the viability of any community. Protecting the drinking water source is a wise and relatively inexpensive investment in your community's future. The overall intent of this assessment is to provide background information for your community to use in developing a local source water protection program. The assessment benefits your community by providing the following:

- ***A basis for focusing limited resources within the community to protect the drinking water source(s).***

  The assessment provides your community with information regarding activities within the **source water area (SWA)** that directly affect your water supply. It is within this SWA that a spill or improper use of **potential contaminants** may cause these contaminants to migrate toward the water **intake**. By examining where the source waters are most susceptible to contaminants, and where potential contaminants are located, the assessment clearly illustrates the potential risks that should be addressed.

- ***A basis for informed decision-making regarding land use within the community.***

  The assessment provides your community with a significant amount of information regarding where your drinking water comes from (the source) and what the risks are to the quality of that source. Knowing where the resource is allows your community planning authorities to make informed decisions regarding proposed land uses within the SWA that are compatible with both your drinking water resource and the vision of growth embraced by your community.

- ***A basis for dealing with future regulations.***

  The assessment has been designed to functionally meet proposed requirements for surface-water supplies. Information needed to address regulatory needs and requirements has been collected and made available to your community through this report.

This source water assessment also provides the basis for a locally developed, voluntary source water protection program. Communities interested in voluntarily developing source water protection programs should contact the Michigan Department of Environmental Quality (MDEQ) or visit the Department web page at http://www.deq.state.mi.us.

Introduction

In 1996, Congress amended the **Safe Drinking Water Act** and provided resources for state agencies to conduct source water assessments by identifying SWAs, analyzing the **sensitivity** of the source to natural conditions, conducting contaminant source inventories, and determining the **susceptibility** of the source to potential contamination. Delineations, sensitivity analyses, contaminant inventories, and susceptibility determinations comprise a "source water assessment." Assessments will be completed for every public water supply source in Michigan. To support this effort, the MDEQ Water Division established a partnership with the U.S. Geological Survey (USGS) to develop a method for conducting source water assessments for surface water supplies (Sweat and others, 2000; Sweat and others, 2001).

The requirements for public water supplies in Michigan to meet United States Environmental Protection Agency (USEPA) **maximum contaminant levels** (MCLs) provide some degree of assurance of safe drinking water; however, all systems are vulnerable to potential contamination. One of the best ways to ensure safe drinking water is to develop a local program designed to protect the source of drinking water against potential contamination. Not only does this add a margin of safety, but it also raises the awareness of consumers and/or the community of the risks of drinking water contamination. It is expected that source water assessment results will provide a basis for developing a source water protection program.

Background

Flint is located in Genesee County, about 55 miles northwest of Detroit, Michigan (fig. 1). The city of Flint water supply serves a population of 125,000. In 1967, the city connected to the Detroit Water and Sewage Department (DWSD) water supply and the Flint Water Treatment Plant (WTP) was placed on stand-by operation. The city is required by the MDEQ to maintain this treatment facility for reliabilty since the city obtains treated water through a single pipeline from the DWSD Lake Huron WTP which is subject to interruption of service. The present intake at the Flint WTP was constructed in 1948 and consists of a concrete box structure on the edge of the Flint River. The intake structure has a bottom elevation of 700.00 and connects through a 72-inch concrete pipe to the low service pump station. Low service pumps lift the river water through the WTP processes of conventional treatment and lime-soda softening .

Flint WTP Emergency, Flint River Intake Structure (Viewed from downstream)

Treatment at the plant includes the addition ferric chloride as a coagulant, lime and soda ash for softening, chlorine for disinfection, and fluoride addition for dental health.

Water treatment plants are periodically inspected to identify construction, maintenance, operational or source defects that could make them vulnerable to contamination, particularly from contaminants that are microbial in nature, such as fecal coliforms. Water suppliers are provided a sanitary survey report that notes deficiencies in the system, and the State may direct the system to make necessary corrections. The sanitary survey is an important part of a safe drinking water program.

Climate

The Flint water supply is located in the central Lower Peninsula hydrologic province (Rheaume, 1991), in the Flint River watershed (USGS, 1974, 1982). The region experiences temperate summers with moderate winters. The Flint Bishop International Airport Weather Bureau station reports that the average annual precipitation for the climatic years 1887-2001 was 30.28 inches and the average from the past 5 years is 31.42 inches (NOAA, 2001), with about 13 percent of that as snowfall between November and March. Annual average runoff for the Flint SWA, extrapolated from Miller and Twenter (1986, fig. 1) is 9 to 10 inches.

Source Water Area Geology and Hydrology

The study area for evaluating the extent of the Flint emergency intake SWA includes the upper reaches of the Flint River watershed (fig. 1). Flint is located roughly in the middle of the Flint River watershed. The SWA consists of lacustrine clays and silts; end moraines of coarse- and medium-textured till; fine-, medium-, and coarse-textured glacial tills ; and postglacial alluvium. The SWA is underlain by Bayport Limestone, Marshall Sandstone and mixed shales, sandstones, and limetsones of the Saginaw and Michigan Formations (Martin, 1955; Milstein, 1987). Soils underlying the Flint SWA are primarily associations of the Blount, Boyer, Brookston, Capac, Ceresco, Celina, Chelsea, Cohoctah, Conover, Del Ray, Kibbie, Lapeer, Lenawee, McBride, Metea, Miami, Montcalm, Sloan, Spinks series (U.S. Department of Agriculture, 1961; BASINS, 1998; MIRIS, 2000). They include loams, loamy sands, fine sandy loams, silty clay and muck.

Flint River – Source Water for City of Flint WTP

Soil permeability is based on the calculated time of travel, in inches per hour (in/hr), for water to move vertically through a saturated soil zone. Soil thickness and permeability values are available in soil survey reports published by the National Cooperative Soil Survey and U.S. Department of Agriculture (1982, 1992, 1993, also 2 county reprints in press). Permeability ranges from less than 0.06 in/hr, rated as very slow, to more than 20 in/hr, rated as very rapid.

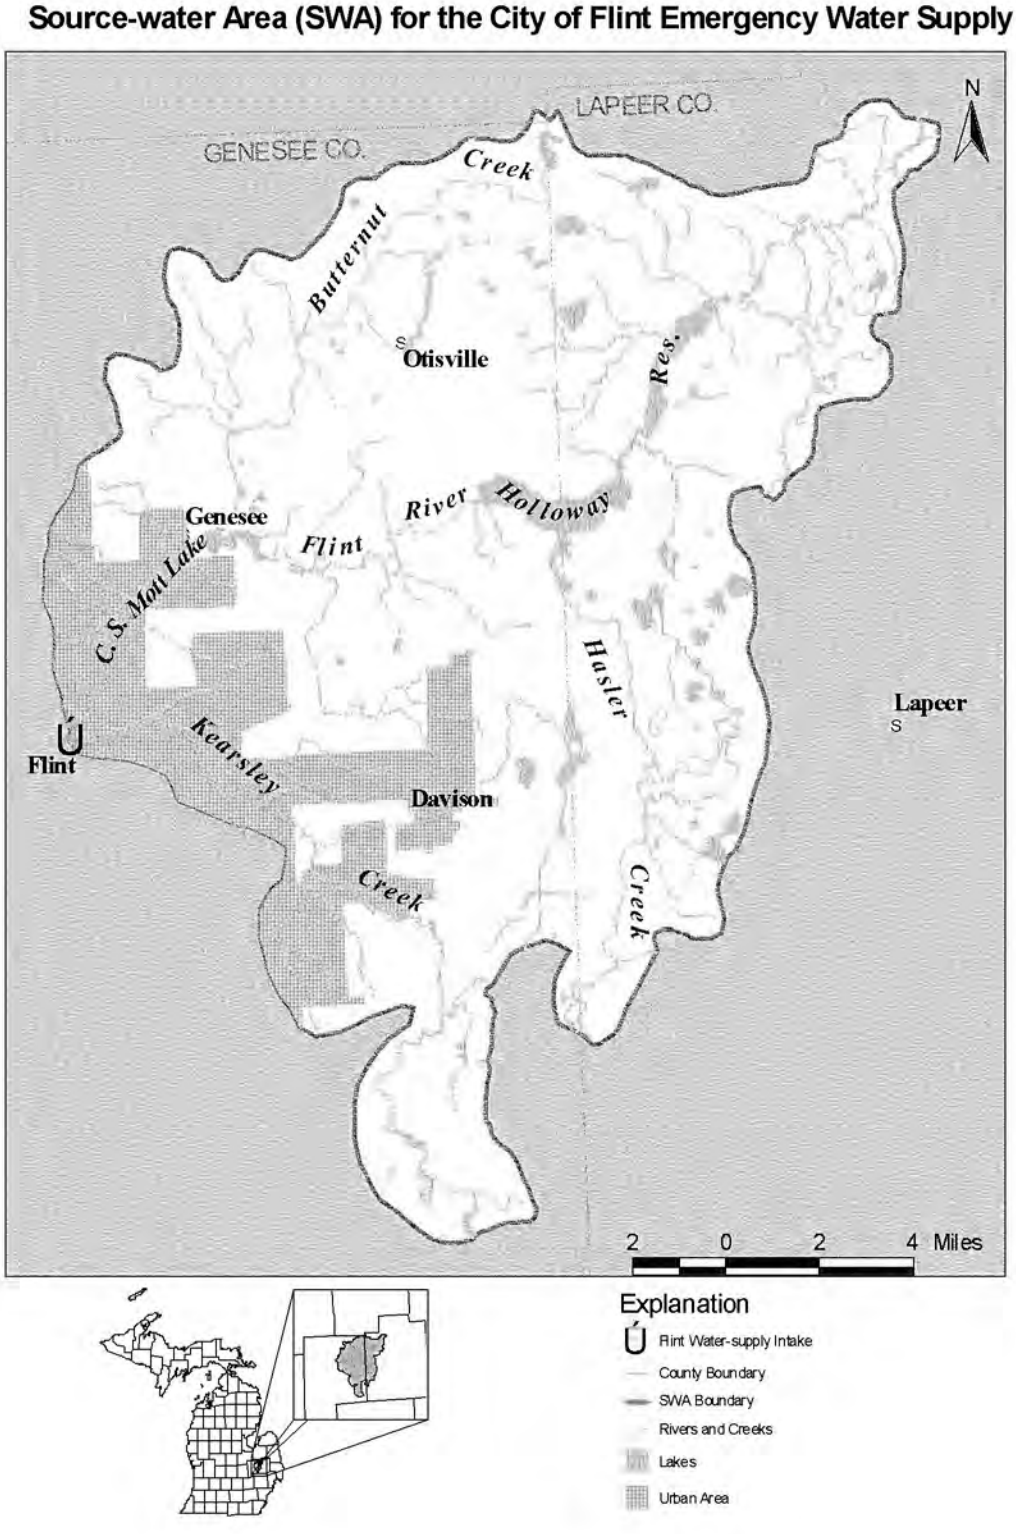

Figure 1. Source-water area (SWA) for the evaluation of the Flint emergency intake, Flint, MI.

Mott Lake and Dam on Flint River upstream of Flint WTP

Very slowly permeable soils significantly reduce the movement of water through the soil zone and, as a result, allow greater time for natural degradation of contaminants. However, such soils also provide for rapid overland transport of contaminants directly to receiving waters, which in turn may affect the water supply intake. Erosion and transport of soils by surface waters can cause an increase in turbidity. In contrast, very rapidly permeable soils allow for rapid infiltration and passage through the soil zone from the surface. Such soils potentially allow rapid transport of contaminants with minimal contact-time available for contaminant breakdown.

Mean, area-weighted, depth-integrated permeabilities for the Flint SWA range from 0.6 to as much as 7.8 in/hr. The mean permeability is 3.1in/hr (Schneider and Erickson, undated, series of 5 maps; BASINS, 1998; MIRIS, 2000). Soil permeability ranges from moderately slow in the northeastern portion of the SWA to moderate over the eastern portion of the SWA to moderately rapid throughout the central and western portions of the SWA, and rapid around the Flint River (fig. 2; U.S. Department of Agriculture, 1961; BASINS, 1998; MIRIS, 2000). Areas adjacent to the Flint River are underlain by highly sensitive drift lithologies, whereas the remainder of the SWA is underlain by least sensitive drift lithology (Lusch and others, 1992).

The Flint SWA contains an area of about 237 square miles (mi2). There are is one operable gage within the Flint SWA and a Flint River gage which operates approximately 9 miles downstream from the Flint Emergency Intake. Between 1932 and 2002 discharge has been recorded at this station by the USGS (Blumer and others, 2002). Annual mean discharge at the Flint River at Flint gauging station was 339 cubic feet per second (cfs) between 1932 and 2001, and ranged from 153 to 1258 cfs. Velocity measured at this stream gage was used to estimate the distance in which contaminants could travel within 24 hours, or the 24-hour time-of-travel (TOT) for this area on the Flint River. The distance calculated for the 24-hour TOT was approximately 27 miles.

History of Raw Water Quality at the Source

Public water supplies are required to routinely monitor raw water quality for selected parameters to optimize treatment, and to monitor treated water quality for a list of contaminants that is determined by MDEQ and the Safe Drinking Water Act. A detection of any contaminant may indicate that a pathway exists for contaminants to reach the intake. It is important to realize that the results from a given sample only provide information regarding the water quality at the time the sample was collected. Water quality can change with time for a number of reasons. The fact that a water sample does not contain contaminants is no guarantee that contamination will not occur in the future. Conversely, the detection of a contaminant in the past does not indicate that it will occur in the future.

The Flint WTP records for the last 3 years of routine operation, 1965-1967 show that water use fluctuated between 34.4 and 46.5 million gallons per day (MGD), with an average daily use of 38.5 MGD. Raw water quality reported for these three years ranged from 5 to 183 nephelometric turbidity units (NTU) for turbidity, 203 to 375 mg/l total hardness as CaCO3, 116 to 235 mg/l alkalinity as CaCO3, 16 to 46 mg/l chlorides and 8.2 to 8.5 units for pH. Precipitation events were noted to increase turbidity and lower hardness. An analysis of flow duration for the Flint River and source water chemistry would probably indicate that there may be an indirect correlation between turbidity, suspended sediments, and coliforms and high flows associated with spring snowmelt and precipitation runoff events.

In recent years, the Flint WTP has undergone operational and process improvements for water treatment. Raw water quality during these testing periods when the WTP was operating but discharging to waste are noted in the table below.

Date of Tests	Turbidity	Total Organic Carbon	pH	Alkalinity	Hardness
	(NTU)	(mg/l)	(pH units)	(mg/l)	(mg/l)
12/5-7/2000	4.2	8.75	7.8	249	324
1/16-18/2001	2.4	8.5	7.7	275	363
3/20-21-2001	5.4	N/A	7.9	196	266
4/16-18/2001	7.6	8.6	8.2	213	284

Source Water Assessment Methodology

Technical guidelines for completing source water assessments are contained in the Michigan Source Water Assessment Program, Assessment Protocol for Great Lakes Sources (Protocol) (MDEQ, 1999, Appendix L) available at http://www.deq.state.mi.us/dwr. In general, an assessment is a process for evaluating a drinking water supply and the potential for its treated water to exceed an MCL due to raw water contamination. A source water assessment considers the SWA, potential sources of contamination within the SWA, conditions of the water supply intake, and susceptibility to contaminants in order to identify potential risks to drinking water quality. Although the Protocol provides the minimum requirements and instructions on how to conduct an assessment, each water supply is unique with respect to how the process is carried out, due to local conditions and information. Sweat and others (2000, 2001) have developed and documented the methodology used in the preparation of this assessment.

Delineating Source Water Areas

Delineation of the SWA is accomplished by using geographic information system (GIS) software to map the watershed(s) that have the potential to affect source water at the intake. Using information from the water supply, a critical assessment zone (CAZ) is defined for the intake (MDEQ, 1999, Appendix L). A buffer is then created along any shoreline intersected by the CAZ, and from the edge of the CAZ to the mouth of any river(s) that might influence the intake. Finally, the buffer is extended along the shoreline of any river(s) that might influence the intake, from the mouth of the river to its headwaters. The area defined by the CAZ, river and shoreline buffers is termed the susceptible area. The susceptible area within the SWA defines locations where a water supply should focus its management strategies and resources to benefit the drinking water resources.

Using the Great Lakes Protocol and the Flint water supply information:

- The CAZ for the Flint intake is assigned as 3,000 ft since the intake is located in an inland river (fig. 3).
- The susceptible area along the shoreline is determined to be: A distance of 300 ft inland along the banks of the Flint River and its tributaries (fig. 4).

Contaminant Source Inventory

Past, current, and potential future sources of contaminants were inventoried to identify several categories of potential sources of contaminants including microorganisms (bacteria, oocysts, and viruses), inorganic

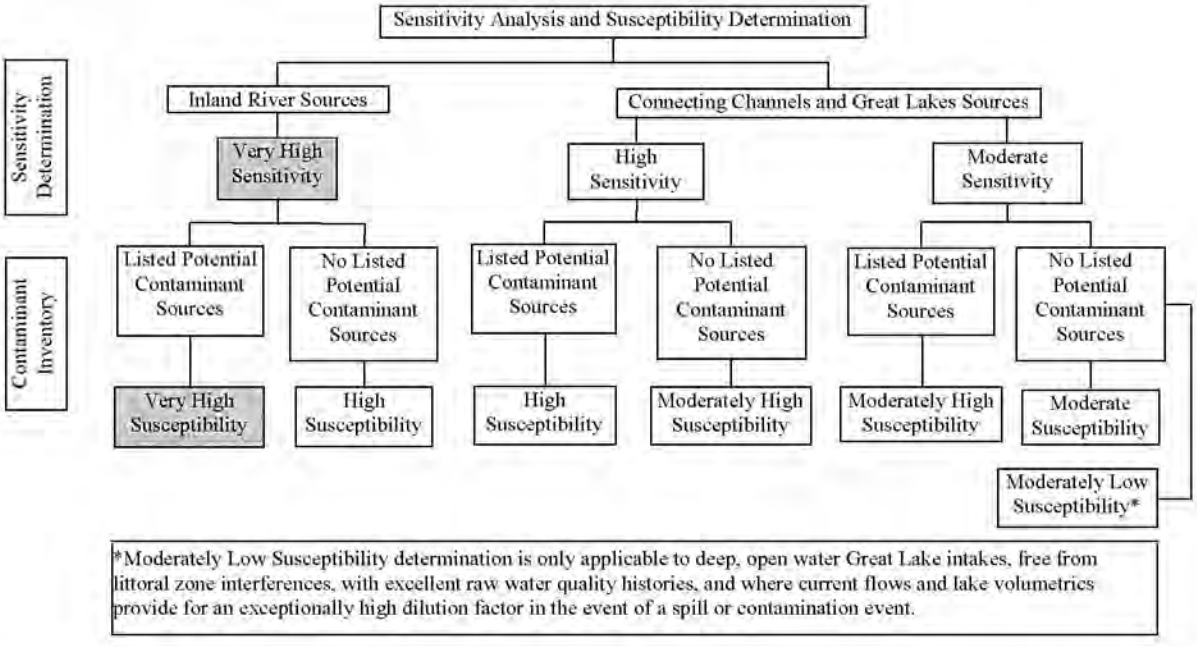

Figure 53. Surface-water sSource sSensitivity aAnalyses and sSusceptibility dDetermination for the ~~Ann Arbor~~Flint emergency water-treatment-plant source-water areas.

compounds (nitrates and metals), organic compounds (solvents, petroleum compounds, pesticides), and disinfection by-product precursors (trihalomethanes, haloacetic acids).

It is important to remember that sites and areas identified by this process are only potential contaminant sources used and managed properly. In addition, assumptions were made about particular types of land uses and risks associated with those land uses. Assumptions are discussed further in the results portion of this report.

The process for completing the inventory included several steps, which are summarized as follows:

1. Reviewed readily available land use maps and historical/current aerial photographs.
2. Plotted relevant information from applicable state and federal regulatory databases including the following lists:
   - MDEQ leaking underground storage tank (LUST) sites;
   - MDEQ registered underground storage tank (UST) sites;
   - MDEQ Environmental Cleanup Site Information System (ECSI) sites;

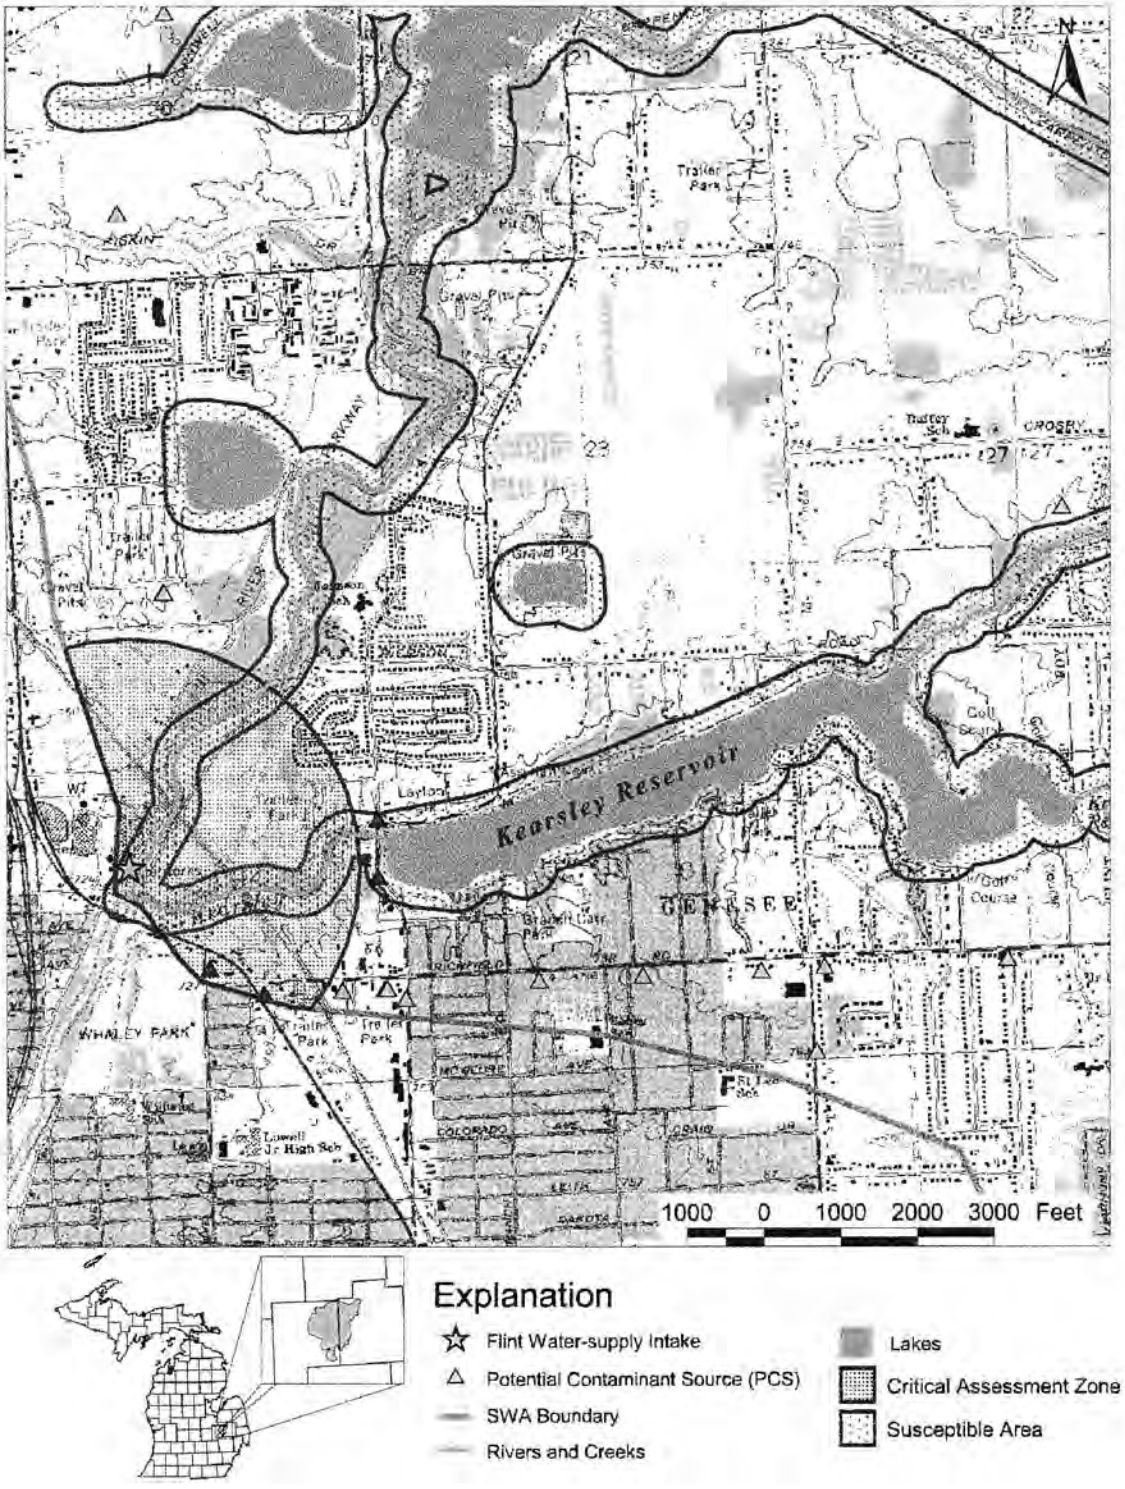

Figure 4. Critical Assessment Zone (CAZ) for the Flint emergency water-supply intake, Flint, MI.

- ·MDEQ Source Information System (for water discharge permit sites including National Pollutant Discharge Elimination System (NPDES) permits, Water Pollution Control Facility (WPCF) permits, storm water discharge permits, and on-site sewage (septic) system permits);
- ·MDEQ Underground Injection Control (UIC) database;
- ·MDEQ Active Solid Waste Disposal Permits list;
- ·Michigan Department of Transportation (MDOT) - Hazardous Materials database;
- ·State Fire Marshall registry of above-ground fuel storage tank sites;
- ·State Fire Marshall Hazardous Material Handlers and Hazardous Material Incidents (HAZMAT) sites;
- ·U.S. EPA BASINS software, version 2.1,
- ·U.S. EPA Envirofacts database;
- ·U.S. EPA Resource Conservation Recovery Act (RCRA) generators or notifiers list;
- ·U.S. EPA RCRA Treatment, Storage, and Disposal Facility (TSDF) Permits list;
- ·U.S. EPA National Priorities List (NPL);
- ·U.S. EPA Comprehensive Environmental Response, Compensation and Liability Information System (CERCLA) List;
- ·U.S. EPA RCRA Corrective Action Activity List (CORRACTS);
- ·U.S. Department of Transportation (DOT) Hazardous Materials Information Reporting System (HMIRS);
- ·U.S. EPA Toxic Chemical Release Inventory System (TRIS); and
- ·U.S. EPA Oil Pollution Act of 1990 Spill Response Atlas

3. Met with public water supply and community officials on June 11, 2003 to identify potential sources not listed elsewhere in databases or on maps and completed a preliminary inventory form to be used in completing the SWA base map. Subsequent contacts by email and telephone on numerous occasions to request additional data, clarify data, and discuss results.
4. Land use and/or ownership (for example, residential/municipal; commercial/industrial; agricultural/forest; and other land uses) was mapped and evaluated in relation to PCS, soil characteristics, and proximity to the intake(s).
5. Conducted an informal field inventory to locate additional PCS.
6. Completed final inventory form of PCS and plotted locations of PCS on the base map.

The purpose of the inventory is three fold: first, to provide information on the location of PCS, especially those within the susceptible area; second, to provide an effective means of educating the public about PCS; and third, to provide a reliable basis for developing a management plan to reduce potential contaminant risks to the Flint water supply.

The inventory process attempts to identify potential point-source contaminants within the SWA. It does not include an attempt to identify specific potential contamination problems at specific sites, such as facilities that do not safely store potentially hazardous materials. However, assumptions were made about particular types of land use. For example, it is assumed that rural residences associated with farming operations have specific potential contamination sources such as fuel storage, chemical storage and mixing areas, and machinery repair shops. It should also be noted that although the inventory depicts existing agricultural uses (crops grown), these are likely to undergo continual change due to normal crop rotation practices. What is irrigated farmland now may be non-irrigated farmland next year, or vice versa.

The results of the inventory were analyzed in terms of current, past, and future land uses and their relationship to the susceptible area and the supply intake. In general, land uses and PCS that are closest to the supply intake pose the greatest threat to a safe drinking water supply. Inventory results are summarized in table 1, and are shown on figure 5.

Many PCS are readily identifiable because they have a single discharge point, and often a permit is required for these discharges. However, other PCS have diffused, poorly defined discharge locations. These are known as non-point discharges because they occur over large areas and may not be quantifiable by readily accepted methods. These non-point source discharges are difficult to identify and control, and consequently to quantify, yet they are a major source of water pollution (Carpenter and others, 1998). Non-point sources also include atmospheric deposition over water and land, and include urban, rural, and

Table 1. Potential contaminant sources in the source water area

Type of Potential Contaminant Source (PCS)	Number of PCS	Number of PCS in Susceptible Area
Hazardous or solid waste site permits	71	11
Industrial facility discharge site permits	9	3
National priority list sites	1	0
Permit compliance system	12	2
Toxic release inventory permits	3	0
TOTALS	96	16

agricultural runoff from areas such as lawns, golf courses, farm fields, pastures, parking lots, and roadways. Runoff from these areas can contain many types of pollutants including sediments, metals, organic and inorganic chemicals, viral and bacterial pathogens, pharmaceuticals, and animal wastes. Transportation also represents a non-point source of contamination. Trucking and railroads transport potential contaminants through the SWA. An accident causing a spill could lead to potential contaminants entering a storm sewer, or in the case of boaters or rail transportation, directly to the Flint River. Petroleum pipeline crossing the upper reaches of the Flint River also pose contaminant threats.

Non-point sources of concern to the Flint water supply are primarily from storm sewers and from industrial, commercial, and residential sources in the SWA and communities upstream of the intake. A railroad bridge immediately upstream in the CAZ of the intake carries occasional train traffic described as hazardous. The West Boulevard storm sewer which discharges in the CAZ provides drainage to the Flint River from an industrialized area.

Railroad Trestle over Flint River Immediately Upstream of Flint WTP

The Michigan Department of Agriculture is working to identify dairies and concentrated animal feedlots (greater than 1000 animal units) in the Flint River watershed upstream of the intake.

The U.S. Environmental Protection Agency (USEPA) has identified one impaired water body in the Flint SWA on its Clean Water Act 303(d) list. The parameter of concern within the Holloway Reservoir is fish consumption advisories for PCBs. An additional impaired water body exists upstream of the SWA but not within the SWA itself. This water body is the collective of unnamed drains in Metamora, and the parameters of concern are untreated sewage discharge and pathogens (MDEQ, 2002).

In general, PCS within the susceptible area pose greater risks than those outside the susceptible area. The presence of PCS within the SWA indicates potential sources of chemicals that could, if improperly managed or released, impact the water quality at the intake. Small quantities of these chemicals, in some

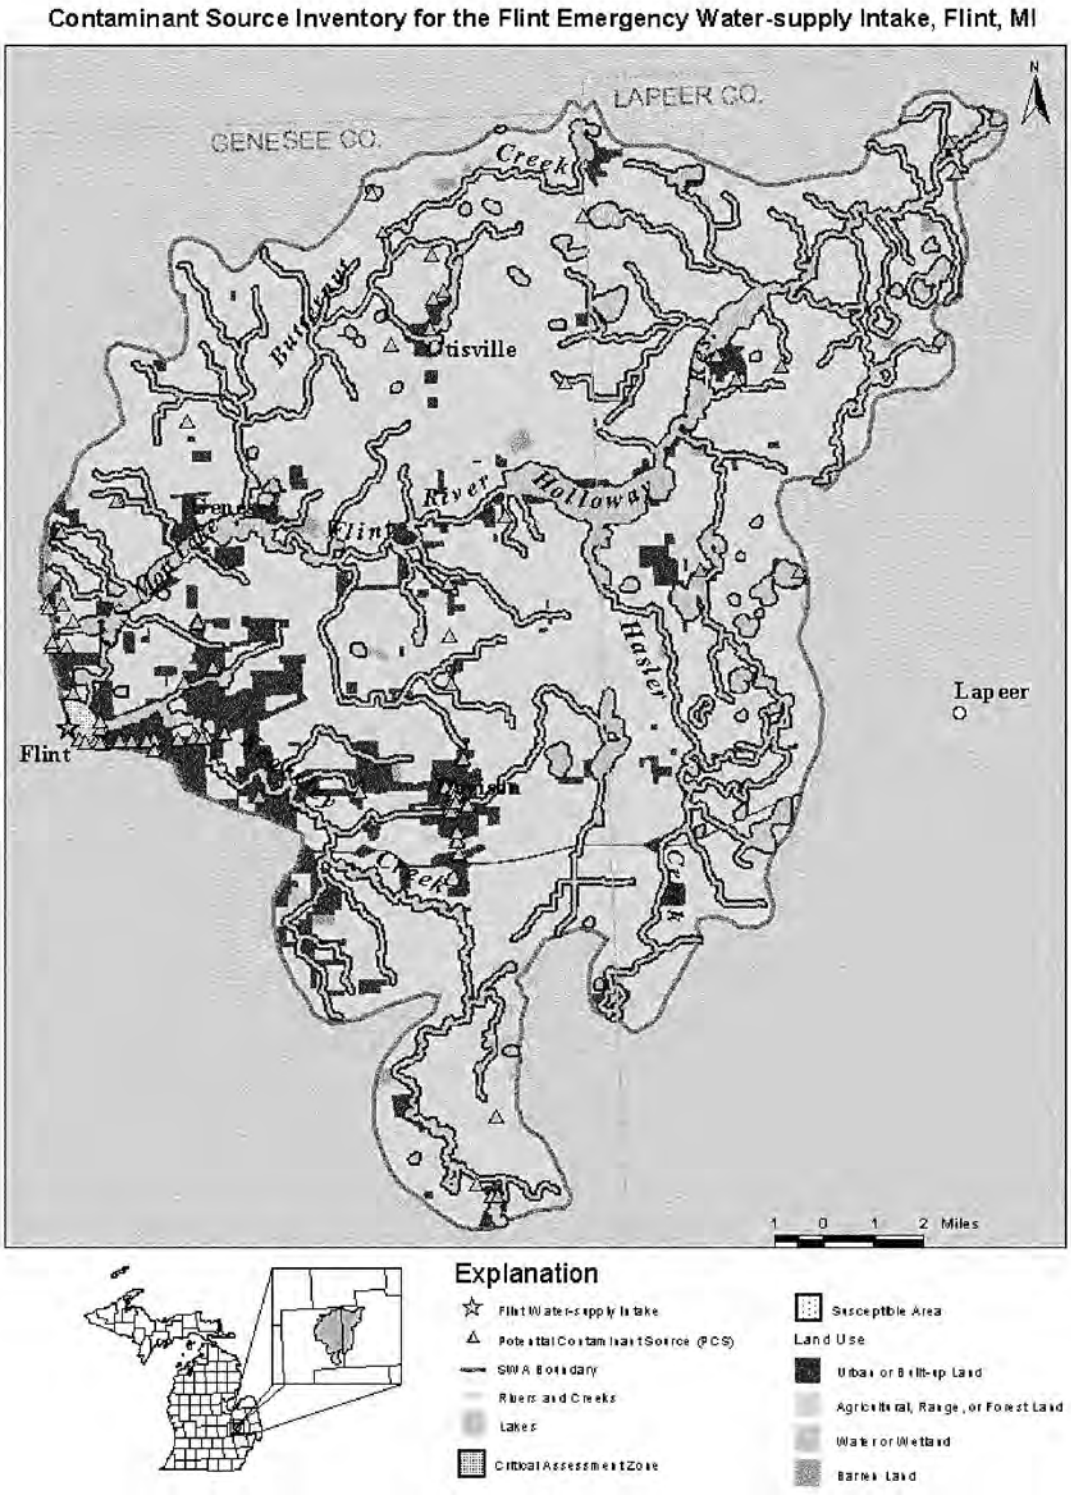

Figure 5. Potential Contaminant Sources in City of Flint Source Water Area, Flint, Michigan

cases less than a liter, can significantly affect the supply. Also of concern is the location and distribution of these sources with respect to highly permeable soils. The susceptible area consists of primarily agricultural and forested land with some urban areas. Overlaying the PCS locations and the moderately rapid to rapidly permeable soil map for the Flint SWA indicates that 21 of the located PCS are located on or very near to

areas with moderately rapid to rapidly-permeable soils. All PCS within the SWA should be addressed; the susceptibility determination, however, provides the water supply with the tools to focus resources where the greatest risk occurs. The results of the PCS inventory performed for Flint water supply is shown on figure 5 and is summarized as a function of PCS locations relative to the susceptible area. The inventory results indicate that there are 7 PCS, holding 8 permits for discharge, within the susceptible area (table 2).

Sensitivity Analysis

Sensitivity is the natural ability of a SWA to provide protection against the contamination of the water supply intake, and includes physical attributes of lakes, rivers, and soils. The sensitivity analysis requires consideration of several different variables related to the natural environment, for example:

- ·Water quality history of the source.
- ·Distribution of moderately to highly-permeable soils.
- ·Amount of available water from precipitation or runoff.
- ·Potential for runoff to affect the intake.
- ·Nature of the intake, including: depth, distance from shore, age, and materials used.
- ·Surface water flow patterns in vicinity of intake.

To perform this analysis, USGS, MDEQ, and the operator of the Flint WTP collected, researched, and analyzed information from the WTP, monthly operator reports, sanitary surveys, soil maps, published reports, and historical plant operation and raw water quality data. The Michigan SWAP has three categories of sensitivity for surface water sources ranging from moderately sensitive to very highly sensitive. Analysis of this information, using guidelines provided in Brogren (1999) and Sweat and others (2000, in press), indicates that the Flint intake is at the high end of this range or very highly sensitive (fig. 3). This means that the natural environment offers little protection against contamination of the water supply intake.

Susceptibility Determination

Susceptibility is the relative potential for contamination to reach the public water supply intake used for drinking water purposes. Whereas the sensitivity of a water supply is the natural ability of the area to protect the intake against contamination, the susceptibility determination also takes into account other factors that will affect whether a contaminant reaches the intake. Whether or not a particular drinking water source becomes contaminated depends on three factors:

(1) The distribution of PCS;
(2) The source water area; and
(3) The natural protection, or sensitivity, of the source.

In conducting a susceptibility determination, the part of the SWA that yields water to the water supply-system intake is identified by establishment of the susceptible area within the source water area. PCS within the susceptible area are then located. Based on the distribution of PCS within the susceptible area, the type of PCS, and the nature of the chemicals they use or store. PCS are analyzed for the risk they may represent to the water supply intake. Along with the presence and distribution of PCS, the sensitivity analysis is then used to determine the susceptibility of the water supply (fig. 3). This leads to a determination of whether the drinking water source is moderately susceptible, highly susceptible, or very highly susceptible to contamination (Brogren, 1999; Sweat and others, in press). It is important to understand that a system can have low sensitivity relative to some conditions (for example, intake construction and location), and high susceptibility because of other conditions (for example, the type of PCS). In Michigan, surface water sources of drinking water range from moderately-low to very-high susceptibility.

When a public water supply is determined to have a moderate, high, or very high susceptibility because of a particular condition or set of conditions, there is a significant risk of contamination of the drinking water source because of that condition or set of conditions. Although the susceptibility determination does not predict when or if contamination will actually occur, it does recognize conditions that are highly favorable for contamination of the supply. In the event of a contaminant release to soils or surface water within the susceptible area, it is very likely that contamination at the intake would occur without completion of remedial actions.

If a public water supply's drinking water source is determined to be highly susceptible, it is recommended that the system identify the condition(s) that lead to the high susceptibility. Immediate steps should be taken to protect the source, and action should be considered to remedy the condition (for example, repairing or replacing faulty intake construction, working directly with facility operators to implement sound management practices, etc.).

All water supplies, regardless of their susceptibility, should consider identified factors that could lead to higher susceptibility in the future, and should prepare a strategy to protect the water supply source. Raising public awareness through signs and other education programs, encouraging proper intake construction and the use of best management practices in existing facilities are good ways of ensuring that a surface water source maintains its moderate susceptibility rating.

Summary and Recommendations

The actual susceptibility of the drinking water source of a water supply depends on a number of contributing factors, some of which are only slightly related. Sensitivity is determined from the natural setting of the source and identifies the natural protection afforded to the source water. Susceptibility is determined by identifying those factors within the community's SWA that may pose a risk to the source water. The susceptibility determination provides information with respect to facilities within the SWA or land areas within the SWA that should be given greater priority and oversight in the implementation of a drinking water protection program.

Sensitivity Analysis: Based on criteria adopted in the Great Lakes Protocol of the Michigan Source Water Assessment Program, the emergency intake for the Flint Water Treatment Plant has a very high degree of sensitivity to potential contaminants.

Susceptibility Determination: The SWA for the Flint intake includes 8 listed potential contaminant sources within the susceptible area, numerous storm drains discharging upstream of the intake, a railroad crossing plus urban, agricultural, and industrial runoff from the Flint River watershed. Combining these potential contaminant sources with the very highly sensitive intake yields a very highly susceptible determination for Flint source water (fig. 5).

Effective Treatment:

The results of this assessment and the recommendations based on these results are summarized as follows:

- ***Intake*** - The Flint Water WTP intake was installed in 1948 and draws water from the Flint River from a shoreline structure making the intake very highly sensitive.
- ***Soils*** - Using a mean, area-weighted, depth-integrated permeability estimation, the soil and subsoil permeability in the SWA range from 0.6 in/hr to as much as 7.7 in/hr. The mean permeability is 3.1 in/hr (Schneider and Erickson, undated, series of 5 maps; BASINS, 1998; MIRIS, 2000). About two thirds of the soils in the Flint SWA are moderately rapid or rapidly permeable. Sixteen (16) PCS are located on these soils. These factors combine to make the SWA, and thus the intake, very highly sensitive. The community should take steps to evaluate current and future land use in areas of highly permeable soils, particularly those occurring within the susceptible area. Those PCS that have been identified either on or in close proximity to these soils should be informed of the sensitive nature of the area and encouraged to adopt best management practices designed to minimize the risk of a ground release. Residential areas that have been developed on these soils should be targeted for educational programs identifying steps that residents can take to protect the water supply.
- ***Historical Contaminant Detections*** – Since the Flint WTP has not utilized the Flint River since 1967 as a source of public drinking water, extensive raw water quality data is not available. However, as is typical for river water, the periodic presence of coliform bacteria is indicative of a relationship between runoff and soil conditions, causing the presence of bacteria at detectable levels in river source water. Background turbidity has recently been reported in the range of 2.4 to 7.6 NTU. These factors indicate that the SWA, and thus the intake, is very highly susceptible.
- ***Sanitary Survey*** – Defects reported as requiring repair either have been corrected or are scheduled for repair. The Flint WTP is undergoing extensive upgrades to improve treatment and reliability. It is important that the water supply continue to follow good management practices.
- ***Potential Contaminant Sources*** - A review of the PCS inventory and the rapidly and very rapidly permeable soil distribution indicates that the Flint SWA has 21 PCS located on moderately rapid to rapidly permeable soils. Within the susceptible area, there are 7 PCS with 8 discharge permits. In addition, there are numerous storm drains within the vicinity of the intake. A railroad crossing immediately upstream of the intake also poses a potential contaminant threat. It is recommended that the community focus initially on PCS that are within the susceptible area as they pose the greatest potential threat to the water supply. These facilities should be made aware of free technical assistance that is available through MDEQ's pollution prevention programs. Through chemical inventory, waste reduction, and by increasing awareness of best management practices, the risk these facilities pose to source waters can be reduced. The PCS inventory indicates that the source is very highly susceptible.
- ***Source Water Assessment*** - The Flint source water assessment is based on these site-specific parameters:
  1. Definition of a Critical Assessment Zone around both intake for a very highly sensitive source;
  2. Definition of a SWA for the Flint River, and shoreline near the intake;
  3. Flow duration and discharge in the Flint River upstream of the intake, and the effects of upstream contaminant discharges on the source water quality; and
  4. Listed and nonlisted potential contaminant sources.
- ***Source Water Protection*** - The City has initiated source water protection activities with an Industrial Pretreatment Program incorporating management plans, chemical containment, and spill response, spill response training, plus storm sewer and street cleaning programs.

The Flint WTP and/or the community should assemble a team to assist in the development and implementation of a source water protection program that uses this assessment to further protect the Flint source water area.

GLOSSARY

Critical Assessment Zone (CAZ) - the area from the intake structure to the shoreline and inland, including a triangular water surface and a land area encompassed by an arc from the endpoint of the shoreline distance on either side of the on shore intake pipe location

Geographic Information System (GIS) - a system to capture, store, update, manipulate, analyze, and display all forms of geographically referenced information

Impaired water bodies - As defined by USEPA and listed on the 303 (d) list of the federal Clean Water Act.

Intake - the point at which source (raw) water is drawn into a pipe to be delivered to a water treatment plant

Lignins - an amorphous, cellulose-like, organic substance that acts as a binder for the cellulose fibers in wood and adds strength and stiffness to cell walls

Maximum Contaminant Level (MCL) - the maximum permissible level of a contaminant in water that is delivered to any user of a public water system

Potential Contaminant Sources (PCS) - listed and non-listed agricultural sites, businesses, and industries that have the potential to cause contaminants to be introduced into source water

Sensitivity - a measure of the physical attributes of the source area and how readily they protect the intake from contaminants

Source - the water body from which a water supplier gets its water

Source Water Area (SWA) - the land and water area upstream of an intake that has the potential to directly influence the quality of the water at the intake

Source Water Assessment Program (SWAP)- in Michigan, the process defined by the state Department of Environmental Quality to complete assessments of all the state's public water supplies

Susceptibility - the Susceptibility identifies factors that may pose a risk within the community's SWA

Susceptible Area - the area defined by the critical assessment zone and a buffer on either side of any drainages that contribute water to an intake

Synthetic Organic Contaminants (SOC) - Manmade organic chemical compounds such as pesticides, etc.

Tannins - naturally occurring phenolic compounds that precipitate proteins, alkaloids, and glucosides from solution that has a yellowish appearance

Volatile Organic Contaminants (VOC) - Unnatural, volatile organic chemical compounds such as gasoline components, solvents, degreasers, etc

> The City of Flint has contracted with Veolia North America in order to have an additional review of the water system. As part of this review, we are working to develop a Technical Advisory Committee (TAC) that will that will receive reports and interact with the technical staff from Veolia. The City has identified 8 - 12 entities or individuals that we are extending an invitation to participate on this committee.
>
> I would like to extend this invitation to you or your designee to be a representative on the TAC team which we hope to have established by early next week.
>
> I understand that this is short notice but if you would consider the offer and confirm or deny your participation I would greatly appreciate it. We are hoping to announce the names of this team at a Public Works Committee meeting Wednesday February 18th. The details of the first meeting and the ongoing agenda which is anticipated to extend through the implementation of the Karegnondi Water Authority as a water source will also be unveiled next week..

Ron,

I received your voicemail with additional questions concerning the TTHM violations with the listed supplies. Please summarize your questions, I can then forward them to the appropriate staff to best answer them, thanks. Also, many of the systems on the list are overseen by Bob London – Saginaw Bay District Office. Bob's email is.. londonr@michigan.gov

Subject: RE: questions from Ron Fonger

Mike,

Because the 2009 exceedance occurred under Stage 1, when I refer to "Bay City", I mean the entire service area (City plus customer communities). We had Bay City sampling both inside and outside the City in order to represent the system as a whole. Two sites represented maximum residence time, and two represented "at least average residence time", which was the criteria for Stage 1. The system as a whole was out of compliance during the 2nd, 3rd, and 4th calendar quarters of 2009, and it returned to compliance during the 1st quarter of 2010. After that, the system as a whole remained in compliance for the rest of the time that Stage 1 was in effect.

Since Stage 2 started, only the listed customer communities exceeded the MCL. The City of Bay City itself has always been in compliance with Stage 2.

Subject: RE: questions from Ron Fonger

Mike,

Populations served:

Beaver Road Association serves 786
Beaver Township serves 1109
Portsmouth Township serves 525
Buena Vista Township serves 8676

The above are the only systems to exceed the MCL since 1/1/2010. In 2009, under Stage 1, Bay City exceeded the TTHM MCL, with a duration of 3 calendar quarters. Since this occurred under Stage 1, compliance was based on a system-wide RAA (of four locations) rather than LRAAs. The highest system-wide RAA during this time was 99.6 ppb.

I will leave it to you to decide what, if any, of the above information should be passed along. I'm sure you have a better idea of what, specifically, he is looking for.

Mike:
Here's what I need to clarify:
What period of time is covered by the TTHM exceedances in your email (are theses the only violations since Jan. 1, 2010) ?
How many customers are served by each of the five water systems that had TTHM exceedances?
What's the best way to describe "Highest LRAA" that's listed for each of the water systems?

When did TTHM become a part of required monitoring? Since that time, have there been changes in allowable levels, and if so, when?
Thanks again for your help,

Subject: Technical Advisory Committee Update

Team,

I have include a list of all of the current participants in the Technical Advisory Team. We are targeting Wednesday March 4th as the first meeting and the time and place are yet to be determined. I have listed a few items to help craft the direction that we are hoping to go with this team;

1. We will likely have a conference number as well as a physical meeting place in case someone is not able to be there.

2. We will define as we go along how often to hold meetings, but we plan to continue throughout the implementation of the KWA.

2. We will start with a general scope and set of deliverables but will look for open input from the group in order to develop additional specifics as to what each member would like to accomplish.

3. Certainly with this assembled team we would want to develop a set of medical FAQ's that would assist the medical community with current and future details of chemicals and risk assessments.

4. We will discuss the treatment process and look at the national discussion on whether or not to use fluoride as well as what additional regulations are possibly being considered the EPA for the future.

5. We will look at what is upcoming with the KWA and water from Lake Huron. What will the chemical challenges be? What will the final product entail?

6. We will evaluate testing options or partners and determine if there is an avenue or demand for such.

These are some of the topics that I plan to delve into and I believe that we have assembled a professional team that can bring enlightenment to all of us. I look forward to working with each of you.

Respectfully Submitted,

--

Subject: FW: Steve Carmody interview. Can you do Friday?

Hey, all. Michigan Radio's Steve Carmody is looking to do a piece with us next Tuesday on Flint's water.
The angle is looking at the Flint River as a source. I've been parsing this out with Mike Alexander in WRD – looking at the waters, what they flow through upstream of the intake, what that means for the quality of the source.
Carmody also wants to look at it comparatively. As in, what other municipalities around the state are using rivers? I'm aware of Manistique, Blissfield, Alma (?), and … ??? What is the quality of those sources, comparatively?
I know, tough story to do. I need some counsel from Drinking water people, collaborating with WRD counterparts, to get us prepped. And I think we'll need one of you three to be part of this interview on Tuesday.
Let me know when the drawing of straws is over. Thanks! ☺

Subject: RE: Steve Carmody interview. Can you do Friday?

Just got off the phone with Steve Carmody. He wants to know how the Flint River water quality is as it relates to a drinking water intake, which is not necessarily the type of water quality assessment we conduct in WRD. We can certainly be part of the discussion if the topic of typical types of inputs to the Flint compared to other Michigan watersheds, but we wouldn't be able to make any statements as to how it compares to other drinking water intakes around MI. I would think someone from Office of Drinking Water and Radiological Protection would be better to answer that question. Thoughts?

Importance: High

Mike,
I have examined the data more thoroughly and compared it with the November 2014 data. I don't want to cause undue concern. The most recent chromatograms may show some increase in concentration compared to November, but this is still fairly low level background. Was the City of Flint still on the Detroit system in December 2013? I have some chromatograms from that sampling that I can use to show you the difference we are seeing.

Steve,

I have reviewed the draft P.O. for FY 15. No major changes that I see; however, I may wish to add in Objective 3 (Special Assignments) my involvement with the Flint Technical Advisory Committee towards solving water related problems with the Flint water system. Preparation and participation in the TTHM Roundtable discussion could also fall under Objective 3....although attendance at the Annual Conference is part of Objective 2; thus, the roundtable assignment could go either way. We can discuss this further. I will also complete my training plan prior to 3/31 along with my IDP.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance

Subject: FW: City of Flint February 2015 MOR
Attachments: February 2015 MOR.pdf

Steve,

The cold water and high flows challenged the city's ability to maintain acceptable treatment. Although they met standards according to our rules, the high treatment rate later in the month and low water temp did have some impact.

Michael Prysby, P.E.
District Enginee
Office of Drinking Water and Municipal Assistance

Mike,

Good morning, I just wanted to get you a copy of the February MOR. A copy will go out in the mail today

County

Treatment Rate and Filter Data

Maximum Treatment Rate:	25.3	Million Gallons per Day
Rated Plant Capacity:	36	Million Gallons per Day
Average Filter Run:	86	Hours
Average Head Loss:	n/a	Feet *(filter head loss meters not operational)
Average Filtration Rate:	2.4	Gallons Per Square Feet per Minute
Maximum Filtration Rate:	3.3	Gallons Per Square Feet per Minute
Average Wash Water Use:	2.4%	Percent of Treated Water

Chemical Data

Chlorine on hand:	8,000	lb.	Est. supply:	8 days
Primary Coagulant (Ferric Chloride) on hand:	125,000	lb.	Est. supply:	3 days
Lime (CaO) on hand:	397	tons	Est. supply:	31 days
Fluoride on Hand:	26,600	lb.	Est. supply:	40 days
Cost of All Chemicals per Million Gallons:	n/a	dollars		
Total Power Cost per Million Gallons:	n/a	dollars		

Remarks	Confluence Point # 1 (N)	Confluence Point # 2 (S)
Number of filter confluence samples > 0.3 NTU:	1	0
Number of filter confluence samples collected:	218	218
Percent of filter confluence samples > 0.3 NTU:	0.5%	0.0%
Number of filter confluence samples > 1 NTU	0	0

Did any individual filter exceed:

1.0 NTU in two consecutive measurements taken 15 minutes apart? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

0.5 NTU in two consecutive measurements taken 15 minutes apart after 4 hours of operation? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

1.0 NTU in two consecutive measurements taken 15 minutes apart for 3 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

2.0 NTU in two consecutive measurements taken 15 minutes apart for 2 consecutive months? NO
If yes, attach specific filter(s) information and indicate required follow-up status.

Was continuous (every 15 minutes) filter monitoring equipment off-line during the month? NO
If yes, indicate date(s), duration, and individual filter grab sampling frequency on a separate sheet.

Did POE disinfectant residual fall below 0.2 ppm during the month? NO
If yes, indicate date(s) and duration on a separate sheet.

Was minimum C*T credit achieved for the entire month? YES
If no, indicate on a separate sheet the date(s) not achieved.

Was continuous POE chlorine residual monitoring equipment off-line during the month? NO
If yes, indicate date(s) and duration on a separate sheet.

Subject: Information Request and Documentation

Hello everyone,

The Genesee County Health Department has made several written and verbal requests for specific information since October, 2014, including a Freedom of Information Act Request on January 27, 2015. The information still has not been received and the city's lack of cooperation continues to prevent my office from performing our responsibilities.

The Genesee County Health Department has the responsibility to conduct illness investigations and consider all potential sources, this is not optional. In 2014, Genesee County experienced a significant increase of confirmed Legionella illnesses relative to previous years. Legionella can be a deadly, waterborne disease that typically affects the respiratory system.

The increase of the illnesses closely corresponds with the timeframe of the switch to Flint River water. The majority of the cases reside or have an association with the city. Also, McLaren Hospital identified and mitigated Legionella in their water system. This is rather glaring information and it needs to be looked into now, prior to the warmer summer months when Legionella is at its peak and we are potentially faced with a crisis.

This situation has been explicitly explained to MDEQ and many of the city's officials. I want to make sure, in writing that there are no misunderstandings regarding this significant and urgent public health issue. The Trihalomethane issues "pale in comparison" to the potential public health risks of Legionella.

I am submitting the attached FOIA request again and requesting that the legal obligations of the request are met. If the information is not available, please let me know. In the past, I have requested to meet with the water plant staff and MDEQ regarding Legionella concerns. I did not receive a response from the water plant staff and MDEQ declined. I think it is in the best interest for all stakeholders that we meet and discuss the issues.

Respectfully,

Jim

Mike,

I am not aware of a meeting request from Jim Henry or the Genesee County Health Department as indicated in his email below. Did you receive any such request?

The FOIA is specifically directed to the City of Flint not the DEQ. If requested some of the information asked for regarding Total Coliform and E.Coli compliance sampling could be provided, but there may also be additional construction repair sampling data.

We can respond to Jim when you get back in, but at this point while the change in source may have created water quality conditions that could provide additional organic nutrient source to support legionella growth, there is no evidence or confirmation of legionella coming directly from the Water Treatment Plant or in the community water supply distribution system at this time.

Subject: TTHM Draft Letter

Team,

We have received our notice from the DEQ and our next step is to have this group preview the letter that we intend to send to the public along with it. I have forwarded everyone a draft of the letter for any comments and I am also sending again all of the literature that was forwarded from Mr. Wright of the EPA and DR. Rose of MSU.

We expect to have an additional FAQ ready and out to this group on Tuesday and we anticipate the violation notice going out in the near future.

The **citizens advisory group** will meet again on this Thursday, we are currently looking to have another **Technical Advisory Committee** with this group in early April.

Thank you,

DRAFT Letter to Flint Healthcare Providers

The safety and quality of Flint's water has been in the news for months. We have worked hard to address these issues and have succeeded in bringing Flint's water within the state's safety guidelines on all measures, including TTHM (total trihalomethanes). Excess TTHM triggered the initial letter to our customers earlier this year.

Even though Flint water now meets the standards and is testing significantly below the state's allowable contamination levels, we are required to send out another letter to residents because the *annual* quarterly testing average is not yet below the state's allowable average.

Flint tests for TTHM – a byproduct of the water chlorination process – at eight different sites in the city. When we began using the Flint River as a source in April of 2014, our first round of quarterly testing for TTHM was conducted in May. At that time, only two testing sites were below the allowable maximum; in August, every site was above the allowable maximum.

The City, with the help of LAN engineering, developed an Operation Evaluation Report (OER) which contained an action plan to address the issue. That plan was implemented with steps including upgrading the ozone treatment process at the Water Treatment Plant (WTP), **complete softening,** increasing water main/hydrant flushing to decrease stagnation, small scale testing of treatment to identify areas of improvement, applying overall improvements to the WTP through operational changes and to the distribution system through water circulation modeling

Because the public notice is based on a **locational running** annual average of quarterly results a notice was not required until November, at which time all but one testing **location** was below the allowable levels. **Our most recent testing in February 2015 showed all locations well below state allowable levels; however, the locational running annual average (based on the four most recent quarters – May 2014 – Feb. 2015) results in all but two locations being below the allowable level.** (See the attached graph outlining our progress.)

We have taken many steps to continue to improve the safety and quality of Flint's water, including bringing in international urban water system consultants, Veolia North America, and establishing two advisory committees: a Citizens Advisory Committee, along with a Technical Advisory Committee made up of representatives from the University of Michigan, Michigan State University, Kettering University, Mott Community College, Genesys, McLaren, and Hurley Hospitals along with local health officials including the Genesee Medical Society the Genesee County Public Health Department, the Michigan Department of Environmental Quality and the U.S. Environmental Protection Agency.

We have also established a hotline 810-787-6537 and a place for continuing updates on the city's website cityofflint.com and have encouraged residents who are concerned about their water to report it to us immediately so that we can make arrangements for on-site testing. Although we have been offering this for more than a month, to date only a few residents have requested on-site testing. All residents wishing to have their water tested can call the hotline number or send an email to flintwater@cityofflint.com.

Despite our progress, we are required by law to once again advise residents about what *was* an excess of TTHM in Flint's water system at the eight testing sights last year. The letter – a draft of which is enclosed for your information – includes legally required language recommending that residents who have (severely compromised immune systems, have an infant, or are elderly) should contact their

physician. This is standard language from the U.S. EPA which is included in every water quality or water related report the City publishes, regardless of whether there are specific health or quality concerns, and is used by other municipalities nationwide. We failed to alert you in advance of our original letter we were required to send out earlier this year – and we don't want to make that mistake again. We have enclosed a fact sheet and a list of Frequently Asked Questions in an effort to help you respond to any inquiries you may get from patients.

We recognize that Flint's water system may still be challenged with *quality* issues such as discoloration or odor but we assure you the *safety* of the water meets all state standards. You should also know that the City also publishes its monthly tests for a wide variety of water treatment components, including chloride levels, on its website at cityofflint.com/?page_id=5643.

We urge you to contact the City of Flint Water Treatment Plant with any specific questions or concerns you may have on this issue. We will do our absolute best to get you the answers you need.

Sincerely,

DRAFT

Subject: LT2 letter for Flint

Hi Mike,

Attached is the information that you will have to mail to the Flint WTP ASAP pertaining to the 2nd round of source water monitoring as required by the LT2 Rule. The first attachment is a letter that you will have to place on Lansing District letterhead with an appropriate signature block. The next 3 attachments are documents that you will need to print out and include with the letter.

You should also consider emailing the sampling plan template, calendar and example schematics to them so they can complete those forms electronically if they choose to do so. I'll email you the example schematics in a separate email.

If you have any questions, please give me a call.

April 3, 2015

Mr. Brent Wright, Water Plant Superintendent
City of Flint Water Plan
4500 North Dort Highway
Flint, Michigan 48505

Dear: Mr. Wright

SUBJECT: Long Term 2 Enhanced Surface Water Treatment Rule
2nd Round of Source Water Monitoring Requirements

The Long Term 2 Enhanced Surface Water Treatment Rule (LT2 Rule) was promulgated by the U.S. Environmental Protection Agency on January 5, 2006. The Michigan Department of Environmental Quality adopted this rule into the Michigan Administrative Rules in December, 2009. All public water systems that are supplied by a surface water source and systems supplied by a ground water source under the direct influence of surface water (GWUDI) are subject to this rule.

According to the LT2 Rule, systems are required to conduct an initial and a second round of source water monitoring for each plant that treats a surface water or GWUDI source. Please keep in mind that Grandfathering data will not be accepted for the second round of monitoring. This monitoring includes at least one source water *Cryptosporidium*, *E. coli*, and turbidity sample per month for a period of 24 months for systems serving populations greater than 10,000 people. Systems will be assigned to a "treatment bin" based on the results of source water monitoring. The treatment bin specifies the level of *Cryptosporidium* removal and/or inactivation that the system must achieve.

Our records indicate that your system is required to comply with the source water monitoring requirements on **Schedule 2** as stated below in Table 1. Therefore, your system is required to submit to the DEQ a source water monitoring plan for each plant by July 1, 2015, and start the 2nd round of monitoring in October, 2015.

Table 1 – LT2 Milestone Dates for 2nd Round of Source Water Sampling

System Population	Schedule	Must submit Source Water Sampling Plan by…	Must begin second round of source water monitoring…
At least 100,000	1	January 1, 2015	April 1, 2015
50,000 – 99,999	2	July 1, 2015	October 1, 2015
10,000 – 49,999	3	July 1, 2016	October 1, 2016
<10,000	4	July 1, 2017	October 1, 2017

Enclosed with this letter is a Source Water Sampling Plan template that you can complete and submit to this office to comply with the July 1, 2015 deadline. The template includes instructions and a worksheet that will assist the DEQ in determining if your plan meets the requirements of the LT2 Rule.

If you have any questions about this subject, feel free to contact me at (517) 290-8817; prysbym@michigan.gov; or Department of Environmental Quality, Office of Drinking Water and

Municipal Assistance, Lansing District Office, 525 West Allegan Street, 1st Floor South, P.O. Box 30242, Lansing, Michigan 48909-7742.

I too know nothing about the city's rate setting methodology. You should confirm again that the public water supply program and Act 399 do not regulate water rates.

For questions about the DWRF, direct inquiries to the SRF Section.

You could also say that spills of this nature are reported to a separate division (Water Resources). The Office of Drinking Water and Municipal Assistance gets notified of such events if WRD or the person receiving the notification believes there may be a public water supply downstream that may be impacted. You should also let her know that surface water treatment plants like Flint are designed to handle microbial contamination including spikes caused by runoff and overflows. It is one of the primary reasons we require a certified operator be present during all periods of operation so they can react appropriately to changing raw water quality.

I would stay away from providing dollar amounts for the loans. Let SRF staff answer that question.

I'm home today with a doctor appointment shortly so I'm copying others that may be of assistance to you.

Richard,

I am not in the position to offer much detail into Flint's water rates and how they are established. Those type of complaints or inquiries are best answered by the city. I can inform Sheila about the city's DWRF loan (early 2000s) used to renovate the WTP and I will suggest that Sheila ask the city how the DWRF debt balance is factored into the water rate structure. I recall the original DWRF loan amount (approx $35 million) for treatment plant upgrades and a current balance of approx $20 million. If I am off on these numbers...let me know. Thanks..

Michael,

I refuse to believe that you were unaware of this incident. I have provided a link below for your reference and that you were informed. Although you have stated that you do not regulate the rates, there, perhaps, is an indirect relationship with Michigan DEQ components and rates charged (i.e revolving funds, loans, etc...). Somewhere in your agency's organization structure these two elements must cross.

http://www.mlive.com/news/flint/index.ssf/2015/04/flushing_discharges_nearly_100.html

Thank you,
Sheila

Sheila,

To better help address your first concern pertaining to the spill of sewage into the Flint, I will need to know the location of the spill and when it occurred. Your second concern, pertaining to the high cost of water cannot be answered by our department since we do not regulate how a water utility charges its customers. It is the city's obligation, as part of building good public relations and perception, to provide an informative response to customers concerned over high water rates.

Hello Mr. Busch,

If possible would you or a representative from your office please attend the conference call that is being hosted by MDCH regarding the Legionella cases in Genesee County. Your knowledge and experiences may help us better understand the Flint municipal water system and municipal water in general, relative to Legionella. I understand that this is short notice, the meeting is today at 2:30pm and the call line is below.

Duffy,

We heard back from Innovyze. The model file got corrupted, but they are walking us through a fix. We are documenting the process so we'll know what do do if it happens in the future.

We expect to have fixed this afternoon and have the maps to you thereafter.

Thank you,

Melissa

Hello, my name is _____ and I'm calling from _____ (health department). We are investigating a cluster of respiratory illnesses in Genesee County. At this point, the source of these illnesses is still under investigation. We are hoping this interview will provide further information and answers about the illnesses. I'd like to ask you a few questions about your home and your exposures during the 2 weeks before you got sick. You do not have to answer any of the questions, but any assistance you can provide is appreciated. Do you have about 30 minutes to talk? If not now, when would be a good time for me to call back? _____

<If the case is from more than 1 month prior, the following text may be used: >
It might be helpful for you to collect documents such as a calendar, receipts, credit card or bank statements to jog your memory about your activities and where you were in the 2 weeks prior to getting sick. The only information we would ask you to share from these are dates and locations. Would you like me to call you back after you have time to collect these materials? When would be a convenient day and time for me to call you back? _____

I have that your first symptom started on *<insert onset date>* _____. Is this correct?

☐ Yes ☐ No ☐ Not sure

If no, what was the first date you started feeling sick? ____/____/_____

List dates of exposure period: from ____/____/____ *to* ____/____/____ *<The exposure period includes the 2 weeks before the date of illness onset>*

MDSS ID _____

Illness Information

1.) During your illness, did you have any of the following symptoms?

	Check one:		
	YES	NO	UNK
Diagnosis of pneumonia			
Fever If yes, highest temp:_____			
Chills			
Cough			
Nausea			
Vomiting			
Diarrhea			
Aches or muscle pains			
Chest pain			
Shortness of breath			
Sore throat			
Headaches			
Other symptoms (*specify*):			

Exposure Information

2.) How long have you lived at your current residence? _____

<If they have moved since the listed exposure period, indicate that you are asking about the house they lived in prior to becoming sick>

a.) If you moved after the exposure period/illness, what was your previous residence address? _____

3.) Where did you get your tap (drinking and other household use) water from between ___/___/___ and ___/___/___ ? *<Exposure period from above>*

- ☐ 1. City of Flint Water
- ☐ 2. City of Flint Township Water
- ☐ 3. Other municipal water system
- ☐ 4. Private well
- ☐ 5. Unknown
- ☐ 6. Other _____

4.) During the last year, has the water pressure at your residence changed? ☐ Yes ☐ No ☐ Not Sure

a.) If yes, did the water pressure: ☐ Increase ☐ Decrease

b). If yes, when did the water pressure change occur? _____

MDSS ID _____

5.) During the last year, has the water quality (appearance, taste, smell) at your residence changed?
☐Yes ☐No ☐Not Sure
a.) If yes, please describe the change in the water quality:_____
_____
b). If yes, when did the water quality change occur? _____

6.) Prior to your illness, did you make any recent plumbing changes or repairs at your residence?
☐Yes ☐No ☐Not sure
a.) If yes, please describe the changes/repairs and give the dates the work was done.
_____
_____

7.) Prior to your illness, were there any water main breaks or other water line issues that affected the water at your residence, including boil water advisories? ☐Yes ☐No ☐Not sure
a.) If yes, please describe the water main/line issues or boil water advisories and give the dates they occurred.
_____
_____

I'd like to ask you some questions about what you did during the 2 weeks **before** you got sick.
The time period I'm asking about is between ___/___/___ and ___/___/___.*<Exposure period>*
During this 2 week period, did you:

8.) Work or volunteer, either full or part time? ☐Yes ☐No ☐Not sure
a.) If yes, complete the following table:

Job description	Company	Location	Any exposure to misty water?

9.) Spend any time in a hospital, doctor's office, clinic, or dentist office as a patient, visitor, employee, or volunteer? ☐Yes ☐No ☐Not sure
a.) If yes, check all that apply:

Exposure	Date(s)	Reason for Visit	Name & City of Hospital/ Office/ Clinic	Name of Doctor
Inpatient ☐	Admission_____ Discharge_____			
Outpatient ☐				
Visitor ☐				
Employee ☐				
Volunteer ☐				

10.) Visit, reside, or work in a long term care facility, nursing home, assisted living facility, or senior living facility? ☐Yes ☐No ☐Not sure

MDSS ID _____

a.) If yes, complete the following table:

Exposure	Date(s)	Name & City of Facility
Resident ☐		
Visitor ☐		
Employee ☐		

11.) In the 2 weeks before you before you got sick (___/___/___ to ___/___/___), did you spend any nights away from home (excluding healthcare settings)? ☐Yes ☐No ☐Not sure

a.) If yes, complete the following table: *<prompts: hotel, campground, cabin, cruise, second home, with family, etc.>*

Accommodation Type/Name	Address Street, City, State	Floor/Room No.	Dates of Stay	
			Arrival	Departure

12.) In the 2 weeks before you before you got sick (___/___/___ to ___/___/___), did you visit any of the following community venues?

	Check one:					
Venue	YES	NO	UNK	Date(s)	Name of Venue	Address
Hotel (*without* staying overnight – e.g. dinner, wedding)						
Auditorium						
Barbershop or Hair salon						
Car wash						
Casino						
Church or Place of worship						
Gym or Work out facility						
Grocery store						
Home improvement store						
Spa or Nail salon						
Mall or Department store						
Movie theater						
Other (*specify*)						

13.) In the 2 weeks before you before you got sick (___/___/___ to ___/___/___), did you have exposure to any of the following water sources, either ***at home*** or while ***away from home***?

MDSS ID _____

Exposures ***at home***	Check one: YES	NO	UNK	Dates (s)	Description: Name (or Type)/Location
Shower					
Use a detachable shower head or hose					
Hot tub, whirlpool spa, Jacuzzi tub					
Sat NEAR a working hot tub or whirlpool spa but did not get in					
Steam room or wet sauna					
Humidifier (whole house or portable)					If yes, specify type: If yes, what type of water is used in device? □Bottled □Tap □Other:_____
Respiratory therapy machine (e.g. nebulizer, CPAP, BiPAP, etc.)					If yes, specify type: If yes, what type of water is used in device? □Bottled □Tap □Other:_____
Other (*specify*)					

Exposures ***away from home***	YES	NO	UNK	Dates (s)	Description: Name (or Type)/Location
Shower at gym, work, other location					
Use a detachable shower head or hose					
Hot tub, whirlpool spa, Jacuzzi tub					
Sat NEAR a working hot tub or whirlpool spa but did not get in					
Humidifier (whole house or portable)					If yes, specify type: If yes, what type of water is used in device? □Bottled □Tap □Other:_____
Pool/splash pad/waterpark					
Recreational or cooling misters					
Steam room or wet sauna					
Decorative fountain					
Outdoor watering hose or sprinkler					
Beach, lake, pond, river, creek, etc.					
Other (*specify*)					

Medical History

Now I'm going to ask a few questions about your medical history and health behaviors.

14.) Have you ever been told by a healthcare provider that you had any of the following conditions:

MDSS ID _____

Condition	Check one: YES	NO	UNK	Comments
Chronic kidney disease				
Weakened immune system (due to cancer, chemotherapy , radiation therapy, immunosuppressive meds, HIV, organ transplant, etc.)				
Diabetes				
Chronic lung disease (COPD, emphysema)				
Asthma or chronic bronchitis				
Heart disease or congestive heart failure				
Liver disease				
Other conditions (*specify*)				

15.) Health behaviors:

	Check one: YES	NO	Quantity per day (packs or drinks)	Duration (years)
Are you currently a smoker?				
Are you a former smoker?				
Do you drink alcohol?				

16.) Do you know anyone else with similar symptoms? ☐ Yes ☐ No ☐ Not sure

a.) If yes, complete the following table:

Name	Phone	State of Residence	Details of Shared Exposure

Additional Comments _____

_____

_____

_____

_____

Thank you so much for taking the time to answer these questions. Do you have any questions that I can help answer? If you have any questions or remember any further details later, please contact the _____ (health department) at phone: _____.

RE: Flint Water Plant Information Request

Dear FOIA Coordinator,

Under provisions of the Michigan Freedom of Information Act (MCLA 15.231 et seq; MSA 4.1801 (1) et seq) please provide copies of the following:

Provide specific water testing locations and laboratory results within the City of Flint public water system for Coliform, E-coli, Heterotrophic Bacteria and Trihalomethanes from January 1, 2010 to January 27, 2015. Provide any additional water testing that has been conducted for identifying potential public health risks. Include any available mapping of the water testing areas.

Provide a map delineating the boundaries of the City of Flint water distribution system. Include any changes to the boundaries, along with corresponding dates from January 1, 2014 to January 27, 2015.

Provide a map or list of locations, detailing dead ends, pooling, low pressure and any additional areas of concern within the City of Flint water distribution system. Include any modifications to the water distribution system addressing concerns, along with corresponding dates from January 1, 2014 to January 27, 2015.

If you determine that any of the requested information is exempt from disclosure, please detail what is being withheld and cite the exemption under FOIA. I anticipate the request being filled within five working days of receipt of this letter, as provided under FOIA. Please contact me at (810) 257-3618 if there are fees associated to comply with this request.

Sincerely,

Jim Henry

RE: Flint Municipal Water Information Request

Dear FOIA Coordinator,

Under provisions of the Michigan Freedom of Information Act (MCLA 15.231 et seq; MSA 4.1801 (1) et seq) please provide the following:

Please provide the dates and specific locations of the water main breaks for 2014. Please provide an electronic version with the address data file, if possible.

Please provide dates and specific locations of flushing activities within a mile radius around McLaren Hospital, Flint for 2014.

Please provide a copy of the Veolia presentation that was displayed at the Technical Advisory Committee on March 4, 2015. If possible please provide an electronic version.

Please provide the monitoring locations and results for heterotrophic bacteria for 2013 through 2014.

If you determine that any of the requested information is exempt from disclosure, please detail what is being withheld and cite the exemption under FOIA. I anticipate the request being filled within five working days of receipt of this letter, as provided under FOIA. Please contact me at (810) 257-3618 if there are fees associated to comply with this request.

Subject: RE: Flint Corrosion Control?

Based on the matrix of recommended corrosion control study components for Large PWS's for both Lead and Copper, there are no additional requirements for the City of Flint based on the levels of lead and copper in the current source water and the results of the lead and copper distribution monitoring.

"The only provision of the Rule which classifies the existing treatment of large PWSs as optimized for corrosion control is when the difference between the 90% Pb-TAP and Pb-POE is less than the lead PQL for each six-month period of the initial monitoring program. By definition, the PQL for lead is 0.005 mg/L; and the lead value for the source water used in this determination is the highest source water lead concentration. If this condition is met, then no study or testing is required. However States may consider the presence of copper in tap samples when determining whether the existing treatment is optimized."

I believe this condition has been met.

Subject: RE: Flint Corrosion Control?

Pat,

As we discussed, Flint is not practicing corrosion control treatment at the WTP. They are conducting lead & copper monitoring at 100 locations. WQ monitoring is also being conducted. The first round of samples after switch-over (July 1, 2014 – Dec 31, 2014) had 90th percentile results as follows: Lead: 6 ppb, Copper 110 ppb

The second round of samples (Jan 1, 2015 – June 30, 2015) is underway with approx. 20 of the 100 sample site results in. The highest lead result out of the 20 received thus far is 13 ppb.

Subject: Watermain breaks

Robert,

Based upon the discussion during our April 29th site visit, you have forwarded available information concerning the occurrence (location & date) of watermain breaks in the city of Flint during 2014. Please provide us with a copy of this information at your earliest convenience. Thanks.

Subject: CCCP letter to Flint
Attachments: Visit Ltr - April 2015.doc

Steve,

Attached is a draft letter for your review to the city of Flint regarding their CCCP.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

May 7, 2015

Mr. Howard Kroft, Director of Public Works
City Of Flint
1101 South Saginaw Street
Flint, MI 48502

WSSN: 02310

Dear Mr. Kroft:

SUBJECT: Flint Cross Connection Control Program

This letter confirms my site visit on April 29, 2015 with Mr. Glen Thomas, Utilities/Cross Connection Division Inspector for the City of Flint. Mr. Stephen Busch from our office was also present. The purpose of the visit was to discuss with and assist Mr. Thomas in identifying larger commercial and industrial customers with extensive premise plumbing systems equipped with ancillary components such as cooling towers and chillers. Some time was also spent discussing the status of the city's Cross Connection Control Program (CCCP). Concerns regarding implementation of the CCCP are discussed in more detail below.

Flint's CCCP has maintained good standing due in part to the effort put forth by the Utilities/Cross Connection Division staff. Although Flint's most recent water system Sanitary Survey did not reveal deficiencies the CCCP, the importance of maintaining an adequate level of CCCP staffing was communicated to the city. Our review of the city's 2014 Cross Connection Report and discussion with Mr. Thomas; however, confirms that the CCCP's inspection and device testing objectives were not met in 2014.

The shortfall in meeting the CCCP objectives appears to be the result of the vacancy in the Plumbing Inspector position; however, given the importance of the CCCP and the potential liability for non-compliance, the full implementation of the CCCP needs to resume in 2015. We realize that implementing a program of this magnitude requires a significant commitment of time and personnel and it has been noted that additional staffing may be needed to maintain its effectiveness. We encourage the city to review CCCP staffing needs and authorize additional workforce as needed in order to prevent the program from declining to a **Deficient** status.

Should you require further information, please contact me at the telephone number below; via e-mail at prysbym@michigan.gov; or Department of Environmental Quality, P.O. Box 30242, Lansing, Michigan 48909.

Sincerely,

Michael F. Prysby, P.E.
District Engineer

Subject: May_Technical Advisory Meeting

Technical Advisory team,

We are planning to hold our next advisory meeting on Wednesday May 20th 2:00 pm at City Hall. The focus points of the meeting will be to convey the advancements in the current water quality, the summer implementation plans and timelines, and the latest information on test results.

We continue to offer testing and to look for any residential concerns about the water. I encourage all of the hospital and college representatives to bring forward any recent issues that may have arisen and we will look to discuss those as well as any other situations that we are aware of. I will send out an agenda early next week and we will plan on having a conference line available to call in.

Please send any questions or comments to me if there are items that you would like to see addressed.

Thank you,

--

CITY OF FENTON
2012 WATER SYSTEM REVIEW
DISTRIBUTION{PRIVATE }

WSSN 2270 Supply City of Fenton County Genesee

Date 04/04/12 Reviewed by MFP District 11

Primary Contact:	Don Fralick	Copy To:	Dan Czarnecki
Title:	Distribution Supt.	Title:	Dir of Pub Works
Telephone	(810) 629-4605	Telephone:	(810) 629-2261
Address:	310 South Leroy Fenton, MI 48430	Address:	same

Population: 11,746 Year: 2010 Basis: 2010 Census

Distribution Classification: S-2 Cert.

Operator in charge: Donald Fralick S-1

Other Distribution System Operators:

Al Maddox S-3
Thomas Wright S-2 (Back-up operator)

Complete Treatment (Lime-soda softening) – F-2 required
Operator Certification: - See WTP Sanitary Survey

Comments:

The water system serving the city of Fenton consists of four wells piped to a 4.0 MGD lime-soda softening treatment facility. The water treatment plant was constructed in 2003 and placed into service in 2004. Information pertaining to the water treatment plant can be referenced from Fenton's Water Treatment Plant Sanitary Survey.

Treated water is distributed to a net work of transmission and distribution mains providing service to a population of approximately 12,000. System storage is provided at the top of Denton Hill by use of two ground storage tanks (1.0 MGAL & 0.5 MGAL). A small in line booster pump station is also provided for a subdivision in the vicinity of the ground storage tanks to help provide sufficient operating pressure.

WELL INFORMATION - See WTP Sanitary Survey

WELL ISOLATION:

Well Number	5	6	7	8
Approved Standard Isolation Radius	100 ft.	100 ft.	100 ft.	100 ft.
Available Isolation Radius	>100 ft.	>100 ft.	>100 ft.	>100 ft.

GW Flows from				
+Basis				
Important Potential Source				
Dist. and Dir. from Well				
Important Major Source				
Dist. and Dir. from Well				
Detects	None	None	None	None

Vulnerability Assessment:

Fenton's wells are determined to be "moderately" vulnerable to volatile organics, pesticides and herbicides. The associated chemical monitoring guidelines are discussed in previous correspondence.

PRODUCTION AND STORAGE REQUIREMENTS

Production History (MGD) - See WTP Sanitary Survey

Five year Max Day 2.25 MGD Date 2007
Five year Avg Day 1.13 MGD

Max Day for capacity requirements 2.25 MGD

Comments:

Water usage has decreased over the past five years and is attributed to a decline in the economy and higher water rates. The city continues to maintain adequate source capacity.

Well Capacity

Total Well Capacity 3,570 gpm 5.14 mgd

Firm Well Capacity 2,450 gpm 3.53 mgd

Firm Well Capacity/Max Day 64%

Total Auxiliary Power
Well Capacity 1,450 gpm 2.09 mgd

Avg. Day/Auxiliary Power Well Capacity 54 %

Comments:
Fenton's total well and firm well capacities have decreased due to a loss of capacity at Well #5; however, available source capacity remains capable of meeting the city's average and maximum day water usage since the city's water usage has also decreased. Peerless Midwest has recommended chemical cleaning, complete overhaul, and installation of a VFD at Well #5. The city intends to proceed with work on Well #5 later in 2012 along with exploring the possibility of constructing a new well at a different depth and/or location. The objective of a new well is to obtain a new source of water with lower hardness; thus, reducing the overall cost of treatment.

PRODUCTION AND STORAGE REQUIREMENTS

STORAGE CAPACITY

	Location: Denton Hill Fac. ID #	Location: Denton Hill Fac. ID #
Volume	1,000,000	500,000
+Type	Gd. Reserv	Gd. Reserv
O.F. Elevation		
Date Constructed	1959	1999
Date Inspected	2000	1999
Date Painted Inside	Concr	Concr
Paint System	NA	NA
Date Painted Outside	NA	NA
Cathodic Protection	NA	NA
High Alarm	Yes	Yes
Low Alarm	Yes	Yes
Average Usable Volume (MGAL)	0.94	0.5

Total Usable Storage 0.94 mil. gal. 0.50 mil. gal.

Total Usable Storage/Max Day 62 %

Total Usable Storage/Avg Day >100 %

Comments:

The total usable storage is slightly less than actual construction due to a 14-inch elevation difference between both tanks. The larger tank is approximately 14 inches higher than the smaller tank, thus the top 60,000 gallons of the larger tank cannot be utilized.

Both tanks are due for a structural inspection. A bid specification for an inspection is being prepared and the intent is to have the inspection out for bid before the end of the city's fiscal year (FY12 – June 30, 2012). The city has included funds in their FY 12 budget for the tank inspection.

DISTRIBUTION

Pumping Stations -

One small in-line booster pump station operates continuously to provide sufficient pressures to the subdivision (55 homes) east of Adelaide Street and Manchester Drive in the vicinity of the ground storage tank. The station consists of 2 in-line submersible pumps each rated at 200 GPM at 50 feet of TDH.

The station operates by manual control only and one pump runs continuously. There is no telemetry to indicate pump status and plant personnel must rely on low pressure complaints from residents of the subdivision to alert them of a pump failure.

This station is not designed to provide fire protection to this area. The primary pump was rebuilt by Layne-Northern in 2005 and there has been no operational problems with the station.

Interconnections With Other Supplies - NA

Distribution Piping

Identify distribution piping materials -

PVC	0 %
D.I.	65%
C.I.	25%
A.C.	10%
Concrete	0 %

Estimated percent of piping with coal tar linings: 0 %

Identify distribution pipe sizes -

2-in	10%
4-in	15%
6-in	20%
8-in	20%
10-in	0%
12-in	30%
14-in	5%
16-in	some

Are there areas where water main breaks are frequent? Yes

Still some areas, however much of the older piping in the south areas of town have been replaced.

Comments:

Significant distribution system improvements were completed during two DWRF projects (late 1990s and again in the early 2000s). The above distribution system percent by pipe sizes does not reflect these most recent projects.

A third DWRF project was eligible for funding in 2006 and a construction permit was issued for the project which consisted of replacement of deficient mains in the northern portions of the city (Adelaide Street to North Road & several side streets). The project; however, did not proceed in 2006 as a result of higher than expected water rate increases associated with the cost of the water treatment plant and its operation. The city; however, acquired bonding through a separate source and completed the project in 2011.

Are there areas where customers complain of low pressure? Yes

Residents at the top of Denton Hill and in the Jane Hill Subdivision are subject to low pressure when the small booster pump station is not in operation.

Are there areas where aesthetic water quality complaints are frequent? Few areas

Softened water scoured out portions of the water system piping and caused short-term complaints. These complaints subsided several years ago with institution of corrosion control treatment and chemical equilibrium becoming established within the distribution system.

Comments:

Are there areas where fire flows cannot be maintained? Few

Comments:

Last ISO report date? 2006 Rating? Class 4

Which, if any, of the above listed areas has the supply prioritized for main replacement, upgrading or looping? Also, if a definite schedule for capital improvement has been established, list the proposed completion date.

General Distribution Comments:

The city needs to update their water system Reliability Study. The updated study needs to re-

access the hydraulic capability of the distribution system. An updated water system general plan also needs to be included with the reliability study. Additional distribution system improvements that are identified in the analysis will also need to be discussed in the study.

Distribution Appurtenances

Hydrants

Number of hydrants app. 602
Number without auxiliary shut-off valves 6
Number that are self-draining app. 10%
Number of inoperable hydrants fixed upon discovery

Frequency of hydrant inspection: yearly or after a fire

Inspection staff: Water dept.

Comments:

System hydrant information is stored in a computer database.

Are there areas where additional hydrants are needed? Some

+If yes, list locations:

A few additional hydrants are needed in the SE portions of the city.

Hydrant location system? Map, database Accurate? Yes
Are hydrants color-coded for capacity? Yes – based on main size

Has this information been provided to the fire department? Yes

Frequency and seasons of hydrant flushing? 1/Yr. Fall

Purpose of flushing? Flush out iron deposits

Is the public notified prior to flushing? Yes

Does flushing follow a specific format? Yes

Is the volume of water used during flushing estimated? Yes

Is a record maintained of hydrant activities? Yes

Comments:
A GIS locating system is in place for maintaining hydrant and valve information.

Valves (excluding hydrant shut-offs)

Number of valves 904
Number of inoperable valves varies
Are there areas where additional valves are needed? Yes

+If yes, list locations:

Additional valving was installed where watermains were replaced.

Valve location system? GIS records Accurate? Yes - 839 valves are located and entered in GIS

Valve Turning Frequencies: No valve turning program is in place. Valves are exercised whenever possible.

Records maintained? Yes

Comments:

The water department has added valve location information to their GIS system and the work is over 90% complete. Operating and maintenance records; however, need to be completed.

Routine valve turning has also not commenced at this time although some valves are turned before a watermain project to verify proper operation. Additional time and/or staffing needs to be dedicated towards establishing an effective valve turning program.

Customer and Service Information

Total number of service connections 4,147

Residential connections 3,627

Commercial/Industrial connections	520
Number of metered service connections	4,147

Identify service line materials and estimate percentages:

+ Lead	0%
Copper	>84%
Galvanized	<15%
Plastic	<1%

The use of plastic pipe for residential service lines has increased recently. The piping material used meets the requirements of the state plumbing code.

Pumpage Distribution (Estimate)

% Residential	80
% Commercial	20
% Industrial	<1

Ownership of Service

From Corp Stop to Curb Stop	City
From Curb Stop to Property Line	NA
From Curb Stop to Meter	Customer
Meter	City

Customer Meters

Types of Meters Used	Sensus – Pos. Displ.
Number of meters w. touch pads or other Remote reading devices	4147
Size of Meters	
Residential	5/8, 3/4, & 1"
Industrial/Commercial	1-1/2 through 4"
Meter Testing/Maintenance Program	tested upon complaint
Average age of meter in system	wide variance
Criteria for change-out	age, poor access, non remote read
Number of Percent Change out per year	5 – 10%

Master Meter Locations — One – Fenton Oaks MHP

Calibration of Master meters — Annually

Meter Reading Staff/Contract — Water Dept.

The city is investigating use of Sensus plastic meters or switching to Neptune or SLC meters in order to meet the new lead-free meter requirement.

Approximately 10% of the city's meters are radio read. There are no plans or program to switch to 100% radio read at this time.

System Growth

Year	No. of Res. Meters Installed	No. of Comm/Ind Meters Installed	No. of CPs Issued	Permitted Amt of WM Feet
2001	241	49	1	2,003 LF
2002	199	62	3	31,251 LF
2003	198	27	4	20,382 LF
2004	142	30	2	1,445 LF
2005	102	11	5	5,095 LF
2006	232	60	3	18,456 (8,879 LF 06DWRF – not done)
2007	46	34	3	640 plus PO4 feed at WTP
2008	52	7	1	Repl exist wm
2009	3	2	1	541 LF
2010	2	4	1	8,261 LF -WM repl.
2011	2	5	2	758 LF

Water Rates

What is your current rate schedule? $5.20 per 1000 Gallons

Are current rates adequate to support O&M And CIPs? Yes

When were the last time rates were adjusted? 2010

Water rate study? When? Yes, March 2005

Meter or ready to serve charge? Yes

Water rate sched/Ordinance available? Yes

Comments:

Fenton's tap-in fee is $1,650 for a residential connection. A substantial increase in water rates occurred

in 2005 due to higher than expected treatment costs. A water rate study has been proposed in the city's FY 13 budget.

Repair Parts Inventory

Extra Mains (sect. For each size in service)	Yes – one for each
Repair clamps (2 or more for each size)	Yes – two for each
Tees, Crosses & Elbows	Some
Hydrants	Few
Valves	Some
Services (corps, curb stops, clamps & lines)	Yes

Hydrants, valves, tees, crosses & elbows are available 24/7 from Michigan Pipe & Valve in Flushing, MI.

Safety Issues

Confined space entry program in place % followed (Y/N) Yes – 100%

Trench safety program in place & followed (Y/N) Yes

Comments:

Hydraulic shoring is used in dangerous situations.

PROGRAMS AND PLANS

Cross Connection Program

Ordinance No. Div. 2 of Fenton Code of Ordinances , Sec. 33-31 through 33-37

Date of Ordinance 01/22/01

Approved Program? Yes Date 01/22/01

Staff assigned to program Hydro-Design, Inc. (HDI)

Is Annual Cross Connection Report Required? Yes

Was previous year's annual report received? Yes Date 03/1/12

Was previous year's annual report acceptable? Yes

Inspection Status: An adequate number of inspections are completed each year

Device Testing Frequency: Yearly

Recordkeeping:

Cross connection recordkeeping is adequate.

Comments:

Fenton has maintained an adequate CCCP through contractual services with HDI. HDI continues to perform routine and follow-up inspections, maintains recordkeeping, and prepares the annual report. Approximately 100 – 120 inspections are completed each year and all high priority accounts are inspected.

Annual Pumpage Reports

Is Annual Pumpage Report Required? Yes

Date received? 01/04/12

Monthly Operation Reports

Are Monthly Operation Reports required? Yes

Were all previous year MOR's received? yes Timely? yes

Are previous year's MOR's Acceptable? yes

Consumer Confidence Reports

Is the annual CCR required? Yes

Was the previous year's report received? Yes

Was the previous year's certification form received? Yes

Emergency Response Plan

Date of most recent plan ...Contingency Plan - Oct, 2008 Acceptable? No

Filed where? Water Dept, MDEQ

Comments:

The city's 2008 water system contingency plan needs to be replaced with a water system Emergency Response Plan

General Plan

Date of most recent plan 2008 Acceptable? Yes

Filed where? Water Department, MDEQ

Comments:

Fenton's most recent water system general plan is kept updated in the city's GIS system. A copy of the general plan printed from the city's GIS system was provided to us.

Reliability Study

Date of most recent study Dec. 1993 Acceptable? No
2001, 2005 – DWRF Project Plans

Filed where? Basic data.

Comments

An updated water system Reliability Study needs to be completed.

Bacteriological Sample Site Plan

Date of approved plan January 2010

Are samples still being collected in accordance with the plan? Yes

The city uses their certified laboratory for total coliform analysis in drinking water.
The sampling site plan needs to be updated to reflect staffing changes in the water department.

Lead/Copper Monitoring Status:

The city has remained in compliance with Pb/Cu regulations and has met both action levels in all applicable rounds (6 rounds conducted). Triennial monitoring is in effect and the next round of samples will cover the three year period from 2012 through 2014. 20 samples are due from the distribution system and these samples need to be collected prior to September 30, 2014.

Conclusions and Recommendations

In general, the Fenton Water System Review (WSR) covers the major aspects of the Fenton water supply including: source, treatment, transmission, distribution, and storage. Each one of the above categories are evaluated on the basis of adequacy, maintenance, reliability, and operation. The WSR also includes a check on the status of Fenton's operator certification and the cross connection control programs. Finally, water quality and Fenton's monitoring programs are reviewed.

Based upon the Fenton 2012 WSR , Fenton's water system shall maintain a "**Satisfactory**" rating. Further discussion regarding existing facilities, reliability, operation, and maintenance are discussed below:

Source:

The city has four production wells available for service with a total and firm capacity of 5.14 million gallons per day (MGD) and 3.53 MGD respectively. This continues to represent a modest reduction in source capacity from 5.4 MGD (total capacity) and 3.8 MGD (firm capacity) noted in 2005. The reduction in source capacity is attributed to a reduction in capacity of Well #5. Also, some loss in capacity was noted at Well #8.

Although Fenton's source capacity has decreased, water usage has also continued to decrease. The average day demand has decreased from 1.5 MGD (2000-2004) to 1.08 MGD (2009-2011). Maximum day demands that ranged between 2.4 to 3.3 MGD (2000-2004) have decreased to between 1.5 and 1.9 MGD after 2007.

Additional source capacity will not pose a critical need provided that the city's maximum day demand remains below 2.80 MGD and the existing source capacity can be maintained. The city has investigated measures to restore or, at least, maintain its current source capacity and includes chemical clean of Well #5 and installation of a variable frequency drive to control pump output. Chemical cleaning was also recommended for Well #8 within the next several years to help improve well performance and prevent further loss of specific capacity. Although the rate of residential and commercial development remains limited, we encourage the city to proceed with the recommended work in order to maintain source capacity.

Next, the city has authorized a consultant to investigate several potential wellsites with the overall objective of acquiring a new source of water having less non-carbonate hardness; thus, reducing treatment cost and residuals. Please keep us updated concerning the status of this investigation. Finally, as a reminder, any test-well drilling needs to be approved by our office prior to proceeding with the work.

Next, Wellhouses #6 and #7 have been refurbished including replacement of the roofs. These buildings are in adequate structural condition.

Finally, it was noted that the city utilizes Peer-Less Midwest to perform annual maintenance on all 4 production wells which includes conducting pump performance tests on a yearly basis. We encourage the city to maintain this level of annual maintenance as it will help to increase the useful service life of this infrastructure. Finally, routine pump and motor maintenance is due for Well #6.

Filters:

The water treatment plant (WTP) includes four mixed media filters. Since the repainting of the filter boxes (2006 and 2007), there have been no significant operational problems associated with the filters.

The WTP operators continue to gain the operating experience and knowledge unique to this treatment facility. Staff maintains filter performance profiles including time turbidity graphs and the information is maintained in the WTP's SCADA system. A preventative maintenance program has also been started with the assistance of Utility Services. The maintenance program included collection of filter core samples. Also, a chemical cleaning of the filter media was recommended. Please provide us with a copy of the core analysis report and the procedure proposed for the cleaning of the filter media.

Finally, WTP operators should continue to work towards expanding their filter maintenance program to include other filter investigation techniques. This should include; rodding and raking the filter media. Partial excavation of filter media can also be performed while a filter is out of service for routine maintenance. We encourage WTP operators to continue to develop and maintain a preventative maintenance program for the WTP filters.

Unaccounted Water Use (loss):

Fenton's unaccounted water use (loss) ranges between 26 and 28 percent. Typical unaccounted water loss in municipal water systems should not exceed 10-15%. Unaccounted water loss greater than 15% could be attributed to undetected leakage in the distribution system, flushing & fire fighting activities, water theft, and un-metered customers.

Next, a portion of the unaccounted water use is attributed to several unmetered customers including process water used for production at the WTP. It is our understanding that metering will be provided at the WTP to account for process water usage. There are; however, several un-metered municipal buildings that also contribute to unaccounted water use. These buildings need to be metered in order to obtain a more accurate determination of unaccounted water loss in Fenton's water system.

WTP Residuals/Sludge Disposal:

Lime sludge produced during clarification is discharged to the WTP's sludge lagoon under the provisions of the renewed groundwater discharge permit GW 1010298 issued in January 2011. The city has maintained compliance with the renewed groundwater discharge permit. The renewed permit allows a maximum volume discharge of 22,000 gal/day (volume based – 40% metering flow and 60% solids). The new permit also allows for a maximum 100,000 gal/day discharge for clean out operations. The renewed permit will allow for greater flexibility for clarifier clean out operation.

Chemical Feed:

WTP staff continues to maintain a split treatment process; thus the ferric feed system has remained out of operation. WTP staff are considering the possibility of utilizing the ferric feed room for fluoride feed since the ferric chloride bulk storage tank is more capable for accepting required delivery volumes of hydrofluosilicic acid.

The ferric chloride feed room may be utilized for fluoride feed; however, the existing ferric chloride will need to be properly disposed. Next, although the downtime needed for routine cleaning of each clarifier will be reduced as part of the revised groundwater discharge permit requirements, operators will need to confirm that treatment plant's objectives are not compromised without the addition of ferric during routine cleaning of a clarifier.

Finally, the repairs to the caustic soda bulk storage tank and the fittings appear to be intact. The structural condition of the bulk storage tank will need to be closely monitored and any further repairs that are necessary should be completed in a timely manner.

Treated Water Storage:

The WTP has a 130,000 gallon treated water clearwell. The clearwell is located in the northeast corner of the WTP underneath the high service pumps. The structure was constructed in 2003 along with the WTP and is in good condition. WTP operators should plan for a routine inspection of the clearwell within the next 3 to 5 years.

High Service Pumping:

The WTP has four high service pumps ; however, a lightning strike in July 2011 took 3 of the 4 pumps out of service. The electrical surge damaged the pump drivers and these units needed to be replaced. Although, this occurrence did not cause failure of WTP operation, it jeopardized the WTP's overall reliability during the time that the three high service were out of service.

We encourage the city to investigate and proceed with installing full lighting surge

protection at the WTP in order to protect the electrical components and controls that are critical to the operation of the WTP.

WTP Security:

Improved security measures should be provided at the WTP; however, the city has had limited success at securing funding toward providing additional security fencing and cameras around the front of the WTP site. Given the importance of improving overall treatment plant security, it may be worthwhile for the city to pursue other funding sources to complete this project.

Distribution System:

Distribution Piping:

The city has maintained an active watermain replacement program since the late 1990s. Completion of two Drinking Water Revolving Fund (DWRF) projects and other distribution system projects has resulted in significant improvements in the southeastern and northern portion of the city's distribution system.

We are pleased with the effort taken towards improving the water distribution system. The city; however, will need to update their most recent water system Reliability Study. Administrative Rule 1203 of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399), requires a public water supply to submit and update a reliability study once every 5 years. Our records show that the city of Fenton's most recent reliability study was completed in 2005 as part of the Drinking Water Revolving Fund Project Plan submittal; thus, in accordance with Act 399 requirements, an updated reliability study needs to be completed. The updated study needs to review the city's 5-year and 20-year water use projections and assess the hydraulic capability of the distribution system. An updated water system general plan and capital improvements program also needs to be prepared as part of the updated study. A list of items that needs to be included in the reliability study was provided to you. Finally, we would be available, as needed, to meet with you and your consultant to discuss the scope of the study in more detail.

Treated Storage:

Treated water storage is provided by two ground storage tanks located at the top of Denton Hill. According to our records, approximately 12 years has elapsed since an inspection of these tanks has been performed. It is our understanding that the tank inspections have been

included in the city's fiscal year (FY) 2012 budget and that the project may be placed out to bid prior to the end of Fenton's FY 2012. Please inform us as to when the tank inspections will be conducted. Finally, we would be interested in receiving a copy of each tank inspection report when they become available.

Isolation Valves:

There has been some improvement noted in the water department's valve program, specifically with the establishment of valve records. Some valves are also being turned prior to proceeding with routine flushing and water distribution projects to verify proper operation; however, a percentage of these valves are left compromised after being turned. As we discussed, these valves will need to be repaired or eventually replaced. Finally, the water department needs to continue to increase the time and effort towards establishing an effective valve turning program. Isolation valves should be turned once every several years and this may best be accomplished by splitting the city's distribution system into quadrants. Valve turning should then be conducted within a specific quadrant each year.

General Plan:

Fenton's most recent water system general plan is kept updated in the water department's GIS system. As part of updating Fenton's 2005 Reliability Study, an updated general plan also needs to be prepared (discussed above).

Emergency Response Plan:

The city's water system contingency plan was updated, at our request, late in 2008. The 2008 contingency plan; however, needs to be replaced with an Emergency Response Plan (ERP). A recent revision to the Administrative Rules of Act 399 now requires an ERP in place of the contingency plan. The ERP provides an outline to follow in the event of a water related emergency (loss of pressure, contamination, etc.). The ERP is similar to a water system contingency plan; however, the ERP calls for discussion of various types of water utility operational plans that may be utilized during a water related emergency. An ERP template was provided to you and can be used for preparing Fenton's ERP. We will review the completed ERP during our next routine surveillance visit.

Sample Site Plan:

Fenton's most recent bacteriological sampling site plan (updated in 2010) needs a minor revision to reflect staffing/contact changes. A sampling site plan template was provided to you and this template can be used in preparing an updated plan. Please provide us with a copy of the updated sampling site plan.

Closing Remarks:

We recognize the number of water system improvements completed by the city since 2000. We encourage the city to continue to provide the resources necessary for water department and WTP staff to continue to operate and maintain the water system in an effective manner. We will follow-up with you on the above items during future site visits.

Report Summary

The following is a list of items discussed in this report which needs to be addressed by the city. No priority is implied by the order. Page references are in parentheses.

1. Proceed with the recommended work on Well #5 to maintain its capacity. Perform routine pump/motor maintenance on Well #6. Budget for chemical cleaning of Well #8. (4, 5, 32, 33)

2. Install metering for the WTP's process water. Eliminate any remaining un-metered accounts. Update Fenton's unaccounted water (loss). (1, 33)

3. Install remaining security fencing and cameras at the WTP. (2, 34)

4. Investigate – install lightning surge protection at the WTP. (6, 34)

5. Maintain – expand the on-going filter maintenance program. (11, 33)

6. Inspect the WTP clearwell within the next 3 to 5 years. (12, 34)

7. Inspect both ground storage tanks and provide us with a copy of the inspection report. (22, 35)

8. Update Fenton's most recent water system Reliability Study. (24, 30, 35)

9. Expand the water distribution system valve program. (26, 35, 36)

10. Prepare a water system Emergency Response Plan. (30, 36)

May 11, 2015

Mr. Howard Kroft, Director of Public Works
City Of Flint
1101 South Saginaw Street
Flint, MI 48502

WSSN: 02310

Dear Mr. Kroft:

SUBJECT: Flint Cross Connection Control Program

This letter confirms my site visit on April 29, 2015 with Mr. Glen Thomas, Utilities/Cross Connection Division Inspector for the City of Flint. Mr. Stephen Busch from our office was also present. The purpose of the visit, in part, was to discuss the city's Cross Connection Control Program (CCCP).

The City of Flint has made significant progress in recent years regarding the implementation of the City's approved CCCP. This effort has included identification of accounts, inspection and re-inspection of accounts at the approved frequencies, and ensuring the testing of backflow prevention assemblies in accordance with approved frequencies. However, the City's most recent report of annual CCCP activities for 2014 indicates a significant decrease in these activities below minimum requirements, and this deficiency must be address.

Our office fully recognizes the recent staffing loss of the City's previous plumbing inspector and the importance of these plumbing inspection services in providing public health protection, but these activities should not be borne at the cost of the City's CCCP and the protections it provides. Given the bacterial detections that occurred in the City's water distribution system in August and September 2014, along with customer complaints regarding aesthetic water quality, the need for protection through cross connection control are very evident.

We also realize that implementing a CCCP of for a community water system of this magnitude requires a significant commitment of time and personnel. We encourage the city to review CCCP staffing needs and authorize the workforce necessary to comply with the City's approved CCCP requirements.

Should you require further information, please contact me at the telephone number below; via e-mail at prysbym@michigan.gov; or Department of Environmental Quality, P.O. Box 30242, Lansing, Michigan 48909.

Sincerely,

Michael F. Prysby, P.E.
District Engineer

Jeff,

In looking at some of the Flint TTHM material for tomorrow's TAC meeting.....I noted our March 1, 2015 comments pertaining to the most recent Operation Evaluation Report prepared for Flint. I didn't see an electronic "sent date" to you on this document. It may be that I hand delivered our comments to LAN during our first TAC meeting on March 4th. If not, attached are our comments and I apologize in the delay. These comments can be addressed in the next report due on May 29, 2015.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

City of Flint
Operational Evaluation Report
March 1, 2015
MDEQ Comments

1. Revise Tables 2 and 3 on Page 7 to account for proper alignment of DDBP samples (results, location, site code). Also, revise statement on Page 1 regarding the number of sites exceeding the TTHM MCL following the 4th quarter sample cycle.

2. The ozone system was recently repaired. (Page 10 & 19). What is the ozone system's current production rate?

3. The city's hydraulic model (prepared by Potter Consulting) is being updated (Page 16). Is the model currently sufficient in determining proper sizing for the transmission main replacement in DuPont & Bishop Street corridor? (currently sized at 24-inch) (Pages 5, 16, and 20)

4. Are the potassium permanganate results & conclusions available? (Pages 4 and 17)

5. We agree that some reduction in storage volume could be achieved without compromising reliability; however given high usage, main breaks, and "let runs" during the winter, storage volume remains important. We agree with the need to determine adequate storage volume which will likely differ between summer and winter. (Page 15)

6. We agree with the concern of re-circulation of water pumped from the booster pump stations; however, we were recently informed of existing distribution system check valves to prevent recirculation. These appurtenances and their condition need to be confirmed. The hydraulic model may also need to be updated to include these valves. (Page 15)

7. We concur with the recommendation to provide the ability to monitor raw water TOC and PTAP TTHM. (Pages 17 & 18)

8. Page 20 provides 2 options to manage water age and each option includes reducing the utilized storage volume of the 3 MGAL well to 2 MGAL. The reduction in storage volume limits the WTP's ability to meet CT under worst case conditions (low temp, high pH, 30 MGD pumping rate from reservoir).

9. Table 11 on Page 21 outlines an Action Plan for Stage 1 and Stage 2 actions. Several actions listed in Stage 2 including; repair of ozone system, continued valve replacement, and replacement of deteriorated watermains are longer term solutions; however, they need to proceed regardless of the outcome of TTHM reduction.

Subject: Flint Filter Media Change to GAC

Hi Mike,

Attached is our preliminary basis of design. We are currently working through details with GAC suppliers to determine the best specific media for Flint, but the Filtrasorb 300 and 400 series from Calgon or equivalent appear to be the best suited. Please note that both meet AWWA B604, but are questionable by Ten States Standards (TSS) as TSS are non-specific for GAC capping. According to Calgon, their Filtrasorb product has been approved by DEQ at numerous plants including Ann Arbor, Grosse Pointe Farms, Manistique, and Alpena.

Also note we intend to add a chlorine feed point following filtration while maintaining the intermediate feed point, with valving, so chlorine can be added at either point. The intermediate feed point prior to filtration can then be used as a means of disinfecting the filters in the future, if necessary.

Steve,

Attached is a draft letter to McLaren Flint concerning the chemical feed system for your review and comment.

Michael Prysby, P.E.
District Engineer
Office of Drinking Water and Municipal Assistance
517 290-8817

May 25, 2015

Mr. Russell Hudson, Director of Engineering Services
McLaren Flint
401 South Ballenger Highway
Flint, MI 48532

Dear Mr. Hudson:

SUBJECT: McLaren Flint – Potable Water System – Supplemental Treatment

This letter confirms my site visit on April 29, 2015 with you and other representatives of McLaren Flint. Mr. Stephen Busch from our office was also present. The purpose of the visit was to discuss risk management for McLaren's potable water plumbing system and to provide guidance towards achieving a more comprehensive risk management program. The visit also included an inspection of the existing chlorine feed system located at the point of entry into McLaren's potable water system.

Our inspection of the chemical feed system revealed several deficiencies that need to be corrected and are discussed in more detail below.

- The chlorine feed pump is not controlled by operation of a pump (electrically interlocked with a water supply feed pump) or by the rate of water flow (flow-paced). The pump operates at a constant feed rate which does not allow for uniform dosage and must be manually shut-off during periods of low usage (overnight) to prevent an overfeed of chlorine.

  The chlorine feed pump rate needs to be controlled by the incoming water flow rate (flow-paced). Flow paced pumps typically operate at all times and allow chemical feed systems to maintain consistent chemical feed dosage with varying water flow rates.

- A means to measure the amount of chorine used needs to be provided and is typically accomplished by use of a weigh scale. A scale with a digital readout is recommended. The amount of water used each day (based on the incoming meter) and amount of liquid chlorine used will allow determination of chorine dosage on a daily basis (typically expressed in milligrams per liter (mg/l)).

- Chlorine residuals are being measured with a Hach Model CN-66 test kit that uses DPD powder (chemistry) with a color disc as the method of readout. We recommend upgrading to a test kit with a colorimeter as method for residual readout. The colorimeter test kit (depending on selected model) provides a larger range of measurement which will be useful for hyper-chlorination events.

Next, prior to proceeding with alteration of the chlorine feed system, approval of the proposed work by our office is required. Please provide us with a description of the proposed work for our review.

Finally, operations staff should establish and maintain chemical feed records that include the following: amount (volume and weight) of water treated, amount and strength of liquid chlorine added, chlorine dosage, and chlorine residual (free and total) measurements. Records should be maintained on a monthly basis. Enclosed is an operation report template that can be used for establishing water treatment records. We are also available to assist you, as needed, towards completing these reporting forms.

Should you require further information, please contact me at the telephone number below; via e-mail at prysbym@michigan.gov; or Department of Environmental Quality, P.O. Box 30242, Lansing, Michigan 48909.

Sincerely,

Michael F. Prysby, P.E.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

PERMIT APPLICATION FOR WATER SUPPLY SYSTEMS

(CONSTRUCTION - ALTERATION - ADDITION OR IMPROVEMENT) AS DESCRIBED HEREIN

Required under the Authority of 1976 PA 399, as amended

This application becomes an Act 399 Permit only when signed and issued by authorized Michigan Department of Environmental Quality (DEQ) Staff. See instructions below for completion of this application.

. Municipality or Organization, Address and WSSN that will own or control the water facilities to be constructed. This permit is to be issued to:

City of Flint
Water Service Center
3310 E. Court Street
Flint, MI 48506
WSSN: 2310

. Owner's Contact Person (provide name for questions):

Contact: Rob Bincsik

Title: Supervisor of Water Distribution & Sewer

Phone: (810)766-7202

Permit Stamp Area (DEQ use only)

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

PERMIT NO. W 151018 APR 3 2015

EXAMINED AND APPROVED FOR COMPLIANCE WITH ACT 399, P.A. 1976

MFP

. Project Name (Provide phase number if project is segmented):

4-Inch Water Main Replacement (contract/phase 1)

4. Project Location (City, Village, Township):
City of Flint

5. County (location of project):
Genesee

ISSUED UNDER THE AUTHORITY OF THE DIRECTOR OF THE DEPARTMENT OF ENVIRONMENT QUALITY

cc:

Issued by: Michael Prysby

☐ **If this box is marked see attached special conditions.**

Instructions: Complete items 1 through 5 above and 6 through 21 on the following pages of this application. Print or type all information except for signatures. Mail completed application, plans and specifications, and any attachments to the DEQ District Office having jurisdiction in the area of the proposed construction.

Please Note:

a. This **PERMIT** only authorizes the construction, alteration, addition or improvement of the water system described herein and is issued solely under the authority of 1976 PA 399, as amended.
b. The issuance of this **PERMIT** does not authorize violation of any federal, state or local laws or regulations, nor does it obviate the necessity of obtaining such permits, including any other DEQ permits, or approvals from other units of government as may be required by law.
c. This **PERMIT** expires two (2) years after the date of issuance in accordance with R 325.11306, 1976 PA 399, administrative rules, unless construction has been initiated prior to expiration.
d. Noncompliance with the conditions of this permit and the requirements of the Act constitutes a violation of the Act.
e. Applicant must give notice to public utilities in accordance with 1974 PA 53, (MISS DIG), being Section 460.701 to 460.718 of the Michigan Compiled Laws, and comply with each of the requirements of that Act.
f. All earth changing activities must be conducted in accordance with the requirements of the Soil Erosion and Sedimentation Control Act, Part 91, 1994 PA 451, as amended.
g. All construction activity impacting wetlands must be conducted in accordance with the Wetland Protection Act, Part 303, 1994 PA 451, as amended.
h. Intentionally providing false information in this application constitutes fraud which is punishable by fine and/or imprisonment.
i. Where applicable for water withdrawals, the issuance of this permit indicates compliance with the requirements of Part 327 of Act 451, Great Lakes Preservation Act.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

Permit Application for Water Systems (Continued)

6. **Facilities Description** – In the space below provide a detailed description of the proposed project. Applications without adequate facilities descriptions **will be returned**. SEE EXAMPLES BELOW. Use additional sheets if needed.

8400 Feet of 24-inch water main from Pasadena Avenue and Iroquois Avenue, South, 20 blocks, along Iroquois Avenue from Pasadena Ave. to Stockdale St.
East, Jog of Approx. 100 feet, along Stockdale Street from Iroquois Ave. to Euclid Ave.
South, 1 block, along Euclid Avenue from Stockdale St. to Welch Blvd.
West, 1 block, along Welch Boulevard from Euclid Ave. to Seminole St.
South Southwest, 3 blocks, along Seminole Street from Welch Blvd. to DuPont St.
South, 10 blocks, along Dupont Street from Seminole St. to Mackin Road.
Water main is stubbed south of Mackin Road for future additions.

EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES – EXAMPLES	
Water Mains	500 feet of 8-inch water main in First Street from Main Street north to State Street. **OR** 250 feet of 12-inch water main in Clark Road from an existing 8-inch main in Third Avenue north to a hydrant.
Booster Stations	A booster station located at the southwest corner of Third Avenue and Main Street, and equipped with two, 15 Hp pumps each rated 150 gpm @ 200 feet TDH. Station includes backup power and all other equipment as required for proper operation.
Elevated Storage Tank	A 300,000 gallon elevated storage tank located in City Park. The proposed tank shall be spherical, all welded construction and supported on a single pedestal. The tank shall be 150 feet in height, 40 feet in diameter with a normal operating range of 130 – 145 feet. The interior coating system shall be ANSI/NSF Standard 61 approved or equivalent. The tank will be equipped with a cathodic protection system, and includes a tank level control system with telemetry.
Chemical Feed	A positive displacement chemical feed pump, rated at 24 gpd @ 110 psi to apply a chlorine solution for Well No. 1. Chlorine is 12.5% NaOCL, ANSI/NSF Standard 60 approved and will be applied at a rate of 1.0 mg/l of actual chlorine.
Water Supply Well	Well No. 3, a 200 foot deep well with 170 feet of 8-inch casing and 30 feet of 8-inch, 10 slot screen. The well will be equipped with a 20 Hp submersible pump and motor rated 200 gpm @ 225 feet TDH, set at 160 feet below land surface.
Treatment Facilities	A 5 million gpd water treatment plant located at the north end of Second Avenue. The facility will include 6 low service pumps, 2 rapid mix basins, 4 flocculation/sedimentation basins, 8 dual media filters, 3 million gallon water storage reservoir and 6 high service pumps. Also included are chemical feed pumps and related appurtenances for the addition of alum, fluoride, phosphate and chlorine.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

Permit Application for Water Systems (Continued)

General Project Information – Complete all boxes below.

7. Design engineer's name, engineering firm, address, phone number, and email address:

Jeffrey B. Markstrom, P.E.
ROWE Professional Services Company
P.O. Box 3748
Flint, MI 48502
(810)341-7500 jmarkstrom@rowepsc.com

8. Indicate who will provide project construction inspection:
☐Organization listed in Box 1.
☒Engineering firm listed in Box 7.
☐Other - name, address, and phone number listed below.

9. Is a basis of design attached?
☐YES ☒NO

If no, briefly explain why a basis of design is not needed.

10. Are sealed and signed engineering plans attached?
☒YES ☐NO

If no, briefly explain why engineering plans are not needed.

11. Are sealed and signed construction specifications attached?
☒YES ☐NO

If specifications are not attached, they need to be on file at DEQ.

12. Were Recommended Standards for Water Works, Suggested Practice for Water Works, AWWA guidelines, and the requirements of Act 399 and its administrative rules followed?
☒YES ☐NO

If no, explain which deviations were made and why.

13. Are all coatings, chemical additives and construction materials ANSI/NSF or other adequate 3rd party approved?
☒YES ☐NO

If no, describe what coatings, additives or materials did not meet the applicable standard and why.

14. Are all water system facilities being installed in the public right-of-way or a dedicated utility easement? (For projects not located in the public right-of-way, utility easements must be shown on the plans.)
☒YES ☐NO

If no, explain how access will be obtained.

15. Is the project construction activity within a wetland (as defined by Section 324.30301(d)) of Part 303, 1994 PA 451?
☐YES ☒NO

If yes, a wetland permit must be obtained.

16. Is the project construction activity within a 100-year floodplain (as defined by R 323.1311(e)) of Part 31, 1994 PA 451, administrative rules?
☐YES ☒NO

If yes, a flood plain permit must be obtained.

17. Is the project construction activity within 500 feet of a lake, reservoir, or stream?
☒YES ☐NO

If yes, a Soil and Erosion Control Permit must be obtained or indicate if the owner listed in box 2 of this application is an Authorized Public Agency (Section 10 of Part 91, 1994 PA 451) ☐ Owner is APA.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

Permit Application for Water Systems (Continued)

18. Will the proposed construction activity be part of a project involving the disturbance of five (5) or more acres of land?
☐YES ☒NO
If yes, is this activity regulated by the National Pollutant Discharge Elimination System storm water regulations?
☐YES: NPDES Authorization to discharge storm water from construction activities must be obtained.

☐NO: Describe why activity is not regulated:
Please call 517-241-8993 with questions regarding the applicability of the storm water regulations.

19. Is the project in or adjacent to a site of suspected or known soil or groundwater contamination?
☐YES ☒NO

If yes, attach a copy of a plan acceptable to the DEQ for handling contaminated soils and/or groundwater disturbed during construction. Contact the local DEQ district office for listings of Michigan sites of environmental contamination.

20. IF YOU ARE A CUSTOMER/WHOLESALE/BULK PURCHASER, COMPLETE THE FOLLOWING

1) Name and WSSN of source water supply system (seller) City of Flint

2) Does the water service contract require water producer/seller to review and approve customer/wholesale/bulk purchaser water system construction plans?
☐YES ☒NO

If yes to #2, the producer/seller approval letter must be attached when submitted to DEQ.

21. **Owner's Certification** The owner of the proposed facilities or the owner's authorized representative shall complete the owner's certification. It is anticipated that the owner will either be a governmental agency (city, village, township, county, etc.) or a private owner (individual, company, association, etc.) of a Type I public water supply.

OWNER'S CERTIFICATION

I, Daugherty Johnson (print) (name), acting as the Utilities Administrator (print) (title/position) for

City of Flint (print) (entity owning proposed facilities) certify that this project has been reviewed and approved as detailed by the Plans and Specifications submitted under this application, and is in compliance with the requirements of 1976 PA 399, as amended, and its administrative rules.

Daugherty Johnson — Signature* | 3/20/15 — Date | 810 766-7135 — Phone

*Original signature only, no photocopies will be accepted.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY

Permit Application for Water Systems (Continued)

PROJECT BASIS OF DESIGN – FOR WATER MAIN PROJECTS

PROJECT NAME: _____

For this PROJECT the following information must be provided per Act 399 unless waived by the Department. For projects other than water main installation, or if additional space is needed, attach separate sheet(s) with detailed Basis of Design calculations.

A. A general map of the initial and ultimate service areas
☐ Included on engineering plans ☐ Attached separately

B. Number of service connections served by this permit application _____

C. Total number of service connections ultimately served by entire project _____

D. Residential Equivalent Units (REUs) served by this permit application _____

E. Total Residential Equivalent Units (REUs) ultimately served by entire project _____

F. Water flow rates for proposed project based on REUs listed in "D' and "E" above

1. Initial design average day flow (mgd) _____
2. Initial design maximum day flow (mgd) _____
3. Total design average day flow (mgd) _____
4. Total design maximum day flow (mgd) _____
5. Required fire flows: (1) _____ gpm for _____ hours

G. Actual flows and pressures of existing system at the connection point(s) (2)

_____ gpm at _____ psi
_____ gpm at _____ psi
_____ gpm at _____ psi
_____ gpm at _____ psi

H. Estimated minimum flows and pressures within the proposed water main system (3)

_____ gpm at _____ psi

(1) Every water system must decide what levels of fire fighting flows they wish to provide. Fire flow should be appropriate for the area (residential, commercial, industrial) being served by the project. Typical fire flow rates can be obtained from the water supply, local fire dept., ISO or AWWA. The water system must then be designed to be able to provide the required fire flows while maintaining at least 20 psi in all portions of the distribution system.

(2) Flows and pressures at the connection points must be given to determine if the existing water main(s) are able to deliver water to the new service area. These numbers can be obtained from a properly modeled and calibrated distribution system hydraulic analysis or hydrant flow tests performed in the field. If more than one connection is proposed, list as needed.

(3) List what the estimated minimum flows can be expected in the proposed water mains based on estimated water demands, head losses, elevation changes and other factors that may affect flows, such as dead end mains.

RICK SNYDER
GOVERNOR

STATE OF MICHIGAN
DEPARTMENT OF ENVIRONMENTAL QUALITY
LANSING DISTRICT OFFICE

DAN WYANT
DIRECTOR

TO: Water Supply Superintendent or Operator-in-Charge

FROM: Adam Rosenthal, Office of Drinking Water and Municipal Assistance, Lansing District Office

DATE: May 6, 2015

SUBJECT: New Lansing District e-mail address for all submittals
2014 Consumer Confidence Report Reminder
Updated Lansing District Responsibilities

New Lansing District e-mail address for all submittals:
The Lansing District Office has created a new e-mail account to be used for all future submittals: **DEQ-DWMA-Lansing@michigan.gov**

Please forward future electronic submittals to the above e-mail address. This includes monthly operating reports, laboratory reports, reporting forms and siting plans. No further submittals will be accepted into an individual's e-mail inbox after May 31, 2015. Please make sure to inform any laboratory or consultant who has agreed to submit documents on your behalf of this change. Mailed hard copies and faxed documents will still be accepted.

2014 Consumer Confidence Report Reminder:
Your annual Consumer Confidence Report (CCR) is due to be delivered by July 1st.

You may use any combination of mail, door-to-door, or electronic methods to deliver to bill paying customers. This means you may mail and/or e-mail a message that the CCR is available on the internet or attached to the e-mail. If using the internet, the CCR must be on the internet when customers receive the message and the internet address displayed in the message must lead directly to the entire CCR. The message should tell customers how to request a paper copy. If you normally publish a non-English language CCR, then the notification of CCR availability should also be in that language.

Refer to last year's report and your most recent sample results when preparing this year's report. For more information on preparing your CCR, visit http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Consumer Confidence Report Rule.

In addition to delivering your CCR to your consumers by July 1st, you are required to send a copy to the Department of Environmental Quality and to your local health department. Also send us documentation certifying how you delivered the CCR. Certification of delivery is due to us by October 1st, but we encourage you to send it to us when you deliver the CCR by July 1st. You can download the *CCR Certificate of Distribution Form* from the web page noted above. **If you e-delivered the CCR, send**

us a sample copy of the notification of CCR availability. For example, you may have put the notification on a water bill.

Did anybody monitor UCMR in 2014? Did the United States Environmental Protection Agency (U.S. EPA) direct you to monitor for unregulated contaminants during 2014? Report the average and range of each contaminant detected. Also, provide an explanation of this required monitoring, such as, "Unregulated contaminants are those for which the U.S. EPA has not established drinking water standards. Monitoring helps the U.S. EPA to determine where certain contaminants occur and whether it needs to regulate those contaminants. We monitored for these contaminants and results of monitoring are available on request."

Please contact us with your questions. We would like to be available to answer all your questions as you draft your CCR, but we have found that our office is inundated with questions as the deadline nears. You might be best served if you contact us before the end of May.

Failure to deliver the CCR by July 1st is a reporting violation and will result in an administrative fine. Contact our office for more information.

Updated Lansing District Responsibilities:
Please make note of the following updates to the Lansing staff and their responsible areas:

Michael Prysby, P.E., is responsible for District 11, which includes Genesee County. Mike can be reached on his cell phone at 517-290-8817.

Bethel Skinker, P.E., is responsible for District 12, which includes the counties of Eaton, Ingham, and Clinton (minus manufactured housing). Bethel can be reached on her cell phone at 517-290-0686.

Mark Joseph, P.E., is responsible for District 13, which includes Livingston County and the City of Ann Arbor in Washtenaw County. Mark can be reached on his cell phone at 517-290-0170.

Kurt Swendsen, Engineer, is responsible for District 14, which includes the counties of Gratiot, Lapeer, Shiawassee, and all manufactured housing community supplies in Clinton County. Kurt can be reached at 517-525-1487.

All Livingston County water supplies are again regulated through the Lansing District Office.

Mr. Brent Wright
City Of Flint - DPW
Flint Water Plant
4500 North Dort Highway
Flint, Michigan 48505

Dear Mr. Wright:

Subject: City Of Flint WSSN: 02310
Lead and Copper Monitoring of Drinking Water Taps

We received your report for the monitoring period July 1, 2014, through December 31, 2014.

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	# of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 parts per billion (ppb)	6.0 ppb	2	100	1/1 and 6/30/2015 Submit results to this office by July 10, 2015
Copper 1.3 parts per million (ppm)	0.11 ppm	0		

Ninety percent of the sites you tested are within action levels under the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. These results must be reported on your 2014 Consumer Confidence Report (CCR) due to our office, your customers, and the local health department, by July 1, 2015. Also include the following statement in the CCR, regardless of the lead and copper levels:

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Flint is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at http://water.epa.gov/drink/info/lead.

Recent changes to the Lead and Copper Rule require you to provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected, within 30 days of learning of results. You must also send us a certification that you met all the delivery requirements along with a sample copy of your customer notice by 3 months after the end of the monitoring period. To download the *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Microsoft Word or PDF format, visit http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms. Water supplies that fail to distribute the Consumer Notice of Lead Results must include the following statement in their CCR, "During the year, we failed to provide lead results to persons served at the sites that were tested as required by the Lead and Copper Rule."

Samples due the next monitoring period mark your second six month round of monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria. We strongly encourage you to sample early in the monitoring period.

Bottles will NOT be mailed automatically. To order bottles, call the Department of Environmental Quality laboratory at 517-335-8184, or download the form EQP 2301 *Requisition for Water Sample Units* from www.michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining the Necessary Sampling Units, and test list.

Sincerely,

Adam Rosenthal, EQA

WSSN: 02310

Dear Mr. Wright:

SUBJECT: Violation Notice (VN) – Maximum Contaminant Level for Total Trihalomethanes (TTHM)
Operational Evaluation – Total Trihalomethanes
1st Quarter 2015 Monitoring Period

The Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA), records show that the city of Flint (City) is in violation of the Safe Drinking Water Act,1976 PA 399, as amended (Act 399); R 325.10610, *Maximum contaminant levels for disinfection byproducts (MCLs)*, of the 1979 Administrative Code.

In accordance with R 325.10610, *MCLs*, of the 1979 Administrative Code, the MCL for disinfection byproduct TTHM is 0.080 milligrams per liter (mg/L) as a Locational Running Annual Average (LRAA) at each monitoring location. As listed in the table below, our records show that the City's highest TTHM locational running annual average (LRAA), based on the last four quarters, ending February 28, 2015, is 0.105 mg/L which exceeds the standard, and that two of the eight sample site locations exceed the standard of 0.080 mg/L.

Further, in accordance with R 325.10719l, *Disinfection byproducts: operational evaluation levels*, of the 1979 Administrative Code, when an operational evaluation level (OEL) at a monitoring location for TTHM exceeds 0.080 mg/L, a supply shall conduct an operational evaluation and submit a written report of the evaluation to the DEQ not later than 90 days after being notified of the analytical result that causes the supply to exceed the operational evaluation level. As listed in the table below, our records show that the TTHM OELs for the City exceed 0.080 mg/L at one of the City's eight sample site locations.

TTHM Results (mg/L)						
	5/21/14	8/21/14	11/20/14	2/17/15	LRAA	OEL
DBP1 McDonalds 3719 Davison	**0.162**	**0.145**	0.059	0.0162	**0.096**	0.059
DBP2 Liquor Palace 3302 S. Dort Highway	**0.112**	**0.127**	0.033	0.0168	0.072	0.049

DBP5 Taco Bell 3606 Corunna Road	0.079	**0.181**	0.034	0.0151	0.078	0.063
DBP6 Rite-Aid Pharmacy 5018 Clio Road	**0.088**	**0.144**	0.054	0.0192	0.076	0.059
DBP7 Salem Housing 3216 MLK Boulevard	**0.082**	**0.112**	0.050	0.0285	0.068	0.055
DBP8 BP Gas Station 822 S. Dort Highway	0.075	**0.112**	0.036	0.0199	0.061	0.047

Our investigation consisted of a review of ODWMA files for laboratory reports received for compliance monitoring. Our investigation is considered complete. This violation began on March 1, 2015, and will continue until TTHM LRAA is below the MCL at all sample sites.

We are encouraged by the results from the most recent round of compliance samples collected on February 17, 2015, which now show individual TTHM levels at less than half of the 0.080 mg/L standard at all locations throughout the City's system. Operational Evaluation Reports from December 2014, and February 2015, have identified possible causes and corrective measures for the previous elevated TTHM levels which we encourage the City to continue implementing. These modifications have likely contributed in part to the reduction in TTHM levels reported in the most recent quarter, and suggest the City may be able to achieve compliance with the TTHM standard at all sites by continuing these efforts.

Our office is currently reviewing the Operational Evaluation Report dated February 27, 2015, and will provide the City and their consultant with comments, as needed, to help address this MCL violation.

Water systems that exceed the OEL must complete and submit an Operational Evaluation in accordance with Administrative Rule 719l (R 325.10719l) within 90 days of being notified of the violation. **An updated Operational Evaluation report, which incorporates the most recent sample results, must now be completed and received by our office by no later than Friday, May 29, 2015.**

If you have any other factual information you would like us to consider regarding the violation identified in this VN, please provide them in a written response by March 19, 2015.

Administrative rule R 325.10403 of Act 399 requires that suppliers provide public notice (PN) as soon as practical, but no later than thirty (30) days after the supplier learns of this type of violation, by mail or direct delivery **and** by any other means reasonably calculated to reach customers not normally reached by mail. Enclosed is a sample PN which contains the minimum required language. The City is encouraged to include additional information regarding its response efforts to this violation. **Please notify your consumers by April 1, 2015, and send us a signed and dated copy of the notice that you issued within ten (10) days of distributing the public notice.** This violation must also be included in your 2015 Consumer Confidence Report, due by July 1, 2016. The PN must be repeated every quarter until you no longer exceed the TTHM standard. Failure to issue a PN for this violation will result in a fine of at least $1,000 per event, with a maximum of $5,000 per violation.

We anticipate and appreciate your continued cooperation in resolving this matter. If you have any questions regarding this VN, please contact us at the numbers below; at prysbym@michigan.gov; or rosenthala@michigan.gov; or at DEQ, P.O. Box 30242, Lansing, Michigan 48909-7742.

Sincerely,

Michael F. Prysby, P.E., District Engineer

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Did Not Meet Treatment Requirements

Our water system recently violated a drinking water standard. Although this incident was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (May 21, August 21, November 20 of 2014, and February 17, 2015). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the MCL. The standard for TTHMs is 80 micro grams per liter (µg/L). The location reporting the highest TTHM level was 105 ug/L; thus, our water system exceeds the TTHM MCL.

What should I do?

- There is nothing you need to do unless you have a severely compromised immune system, have an infant, or are elderly. These people may be at increased risk and should seek advice about drinking water from their health care providers.
- You do not need to boil your water or take other corrective actions. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours.

What does this mean?

This is not an emergency. If it had been an emergency, you would have been notified within 24 hours.

People who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer.

What is being done?

We are currently working on solutions to correct the problem. We anticipate resolving the problem in 2015. Our most recent individual sample results were all less than half the 80 µg/L standard, however since compliance is calculated using a locational running annual average (LRAA) of the most recent four quarters, we are still out of compliance with the MCL at two of eight locations.

For more information, please contact Mr. Brent Wright at 517-787-6537, or the Flint Water Plant at 4500 North Dort Highway, Flint, Michigan 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

Signature	Title	Date Distributed

Reminder to water supplier: This notice/certification must be sent to the Department of Environmental Quality.

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Chateau Du Lac Condominium – Lead & Copper Action Level Exceedance

This letter will confirm my visit with Mr. Robert Stucker, your operator-in-charge (OIC), on December 5, 2013, at Chateau Du Lac Condominiums (CDLC). The purpose of the site visit was to confirm installation of the raw water meter and elimination of the cross connection on the pool fill line.

Based upon our site inspection and your February 21, 2013, response letter, raw water metering has been provided and an approved reduced pressure zone backflow preventer device was installed on the pool fill line. Since raw water metering has been provided, water usage will need to be monitored and reported on a yearly basis (annual pumpage report). Your OIC can assist you in completing the annual pumpage report each year.

Next, the insulation around each hydropneumatic storage tank should be removed in order to perform a visual inspection of each tank and to complete any necessary maintenance and/or repairs. We also question the need to insulate the tanks since the wellhouse room temperature does not fall below freezing. We recommend that the insulation be permanently removed.

Next, the CDLC exceeded the Action Level (AL) for lead in 2011 and has continued to exceed the lead AL in all subsequent 6-month monitoring periods. Our records show that the CDLC has failed to meet the lead AL for seven routine monitoring periods since establishment of the lead and copper monitoring program in1993.

Given the number of lead AL exceedances, the CDLC no longer has the option to conduct additional rounds of lead and copper monitoring in an attempt to meet future ALs. The CDLC must minimize lead and copper in the drinking water by reducing the corrosion of water pipes and household plumbing that contain lead and copper. The CDLC must propose a corrosion control treatment plan by January 31, 2014. Potential

types of corrosion control treatment may include; addition of phosphate or silica based-based corrosion inhibitor, pH and alkalinity adjustment, or calcium adjustment. We encourage you to retain a consultant who specializes in water treatment for further assistance in selecting the optimal type of corrosion control treatment. After treatment is installed, monitoring for lead and copper will resume to ensure the lead and copper ALs are consistently met. Finally, prior to installing corrosion control treatment, an Act 399 construction permit must be issued by our office authorizing the proposed work.

Finally, the CDLC must provide customer notice of the most recent lead sample results and continue to distribute public education materials in accordance to the guidelines provided in our June 19, 2012, letter (copy enclosed).

If you have any questions, feel free to contact me at the number listed below, at prysbym@michigan.gov; or Department of Environmental Quality, Office of Drinking Water and Municipal Assistance, Lansing District Office, 525 West Allegan Street, 1st Floor South, P.O. Box 30242, Lansing, Michigan 48909-7742.

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Chateau Du Lac Condominium - Water System Sanitary Survey

This letter will confirm my visit with Mr. Robert Stucker, your operator-in-charge (OIC), on November 15, 2012, and summarize the subsequent review and discussion of the water supply facilities serving Chateau Du Lac Condominium. The purpose of this meeting was to evaluate the water system with respect to the requirements of the Michigan Safe Drinking Water Act 1976 PA 399, as amended (Act 399). In addition, the enclosed Water System Review form was updated to gather information on the Chateau Du Lac Condominium water supply system.

This most recent evaluation confirms that the water system Emergency Response Plan (ERP) was completed. Aside from a few minor revisions that will be completed by your OIC, the ERP meets our requirements. A copy of the ERP should be kept in the wellhouse for use in the event of a water related emergency. The ERP should also be updated every two to three years or if there are any water related changes. Also, dehumidification was provided inside the wellhouse as a means to reduce moisture and the rate of corrosion.

Next, the following table summarizes our findings from our survey of the water system:

Survey Element	Findings
Source	**Deficiencies Identified**
Treatment	No deficiencies/recommendations
Distribution System	**Deficiencies Identified**
Finished Water Storage	Recommendations made
Pumps	Recommendations made
Monitoring & Reporting	**Deficiencies Identified**
Management & Operations	No deficiencies/recommendations
Operator Compliance	No deficiencies/recommendations
Security	No deficiencies/recommendations
Financial	No deficiencies/recommendations
Other	Not evaluated

The following deficiencies are violations of the Act 399, and must be resolved in order to return the water system to compliance.

1. The raw water meter inside the wellhouse is not functioning and has not been repaired or replaced as we requested in our previous correspondence. This is a violation of Act 399, Rule 325.10829(a).

2. Annual pumpage reports are not being prepared and submitted to the Department of Environmental Quality (DEQ) by March 30th of the following year as required in Act 33, Rule 325.11504(1)(2). The lack of a functioning raw water meter contributes to this violation.

3. A cross connection exists between the clubhouse domestic plumbing and the swimming pool fill line. Although the connection is physically disconnected during the winter months, an acceptable backflow prevention device needs to be installed in the vicinity of the connection since this line is re-connected during the summer months. An approved vacuum breaker is the type of device that will be required for this application. Enclosed is a list of approved vacuum breakers.

Next, it is hoped that the following recommendations will prove useful in enhancing the operation and maintenance of your water supply.

4. Establish accurate hydrant and valve records. Accurate records are essential for effective operation and maintenance of the distribution system and they also play an important role in mitigating water system emergencies.

5. Remove the insulation (temporarily) from each hydro-pneumatic tank and inspect their external surface for corrosion. If the tanks are showing signs of corrosion, their surface should be re-coated with an epoxy coating system suitable for potable water storage tanks. The surface of each tank should be adequately prepared (abrasive removal of old paint system and corrosion) prior to applying the new epoxy coating system.

Please submit a letter by January 15, 2013, that outlines Chateau Du Lac's plans and schedule to address the above items.

Additionally, there were a number of changes made to Act 399 in 2009 that place new or modified requirements on water systems as of January 1, 2016. These changes are summarized below:

- General Plans: Now required for manufactured housing communities, health care facilities, and community water system serving less than 50 living units or 200 people. Chateau Du Lac has been reminded of the need to provide an accurate water system general plan. An "as-built" copy of the general plan needs to be compiled and may be available from the consultant who designed the water system.

Please ensure that *Chateau Du Lac Condominium* is in compliance with the requirement listed above.

Finally, additional lead and copper monitoring is being conducted to address the lead action level exceedance in 2011. Both the lead and copper action levels must be met for two consecutive six month periods in order to forgo the public education requirement and the need to pursue corrosion control treatment. Please reference the June 19, 2012, letter (copy enclosed) that provides guidance concerning the most recent lead action level exceedance.

Based upon the monitoring conducted in 2012 thus far, the lead action level has not been met. Lead and copper monitoring will need to continue through June 30, 2013, in order to determine compliance with the lead and copper action level. The specific lead and copper monitoring requirement will be discussed in Chateau Du Lac's 2013 monitoring schedule.

If you have any questions, feel free to contact me at the number listed below, at prysbym@michigan.gov, or Department of Environmental Quality, Office of Drinking Water and Municipal Assistance, Lansing District Office, 525 West Allegan Street, 4th Floor North, P.O. Box 30242, Lansing, Michigan 48909-7742.

WSSN: 1353

Dear Mr. Carter:

SUBJECT: Water System, Chateau Du Lac Condominium

This letter confirms my visit on October 21, 2011, with Mr. Robert Stucker, your operator-in-charge (OIC). The purpose of the visit was to conduct routine water system surveillance at Chateau Du Lac condominiums. We are somewhat disappointed in the lack of progress made towards correcting the water related concerns that were noted in the Chateau Du Lac 2009 Water System Review. These concerns are discussed in more detail below.

1. Chateau Du Lac's most recent water system general plan is clearly outdated and the plan has not been updated as we requested. As we discussed, an "as-built" copy of the general plan needs to be obtained and may be available from the consultant who designed the water distribution system. An updated water system general plan needs to be prepared and a copy sent to us by no later than January 31, 2012.

2. A water system Emergency Response Plan (ERP) has not been prepared as we requested. The ERP provides an outline to follow in the event of a water related emergency (loss of pressure, contamination, etc.). A template that can be used for preparing the ERP was provided to your OIC. We will review the completed ERP during our next routine site visit.

3. Dehumidification has not been provided as a means to control moisture and limit corrosion within the wellhouse.

4. The raw water meter inside the wellhouse is not functioning and has not been replaced as we requested. The raw water meter needs to be repaired or replaced such that accurate water usage information can be obtained by no later than January 31, 2012.

5. Chateau Du Lac's lead action level was exceeded during routine lead and copper monitoring in 2011. Two consecutive six-month rounds of lead and copper monitoring will be required, along with water quality parameter monitoring and public education. Specific monitoring & reporting details will be covered in a separate letter. Finally, the 2011 exceedance represents the 4th exceedance in the lead and copper action level since the start of the lead and copper monitoring program. We will be reviewing the history of Chateau Du Lac's lead and copper monitoring program to determine whether a corrosion control study needs to be conducted and/or treatment needs to be provided.

Finally, according to our records, routine pump and motor maintenance for Well #2 has not been performed within the last 12 years. As we discussed, Type-I wells (pump & motor) should be scheduled for routine maintenance once every 5 to 10 years. This type of preventative maintenance is an accepted standard that is practiced in the waterworks industry and is essential in minimizing the chance of an unexpected failure of the well pump/motor and the potential for a loss of water service. Routine pump and motor maintenance should be performed for Well #2 during 2012

We look forward to working with you on these and on any other water related matters. Should you require further information, please contact me at the telephone number below; via e-mail at prysbym@michigan.gov; or Department of Environmental Quality P.O. Box 30242, Lansing, Michigan 48909.

Sincerely,

Michael Prysby

Dear Mr. Carter:

SUBJECT: Water System, Chateau Du Lac Condominium

This letter confirms my visit on November 6, 2008 with your contract operator, Robert Stucker. The purpose of the visit was to conduct routine water system surveillance. Specific water system concerns that need attention are discussed below in more detail.

1. Our most recent copy of Chateau Du Lac's water system general plan was prepared in 1984, and the plan is clearly outdated. An updated water system general plan was not available at the time of the site visit. Also, it does not appear that an updated plan was prepared as we requested in our previous visits and correspondence (copy of our January 8, 2007 letter enclosed).

   An updated water system general plan needs to be prepared and a copy of the plan sent to our office by no later that January 31, 2009. As we discussed, the updated general plan needs to show the location and size of all watermains, hydrants, valves, service lines, etc. The plan should also show the location of the wells, discharge piping, wellhouse, and storage facilities.

2. Chateau Du Lac's bacteriological sample site plan was updated as we requested. As we discussed, a third repeat sampling location needs to be added to the plan since one distribution system sample is collected each month. The updated sample site plan is approved with the condition that a third repeat sampling location is added to the plan.

3. Our inspection of the wellhouse (west half of the clubhouse basement) revealed that this area is being used to store much of the swimming pool equipment. These items make it cumbersome to perform routine wellhouse activities.

   The purpose of a Type-I wellhouse is to allow for flexibility of operation of the water system. The west half of the basement is dedicated for the wellhouse piping and appurtenances and is not intended to be used as a storage area for typical outdoor maintenance equipment including pool supplies and parts. This area must also be accessible only to the water system operator. These miscellaneous items need to be stored in an area that is separate from the wellhouse piping and appurtenances.

4. The lead action level was exceeded during routine lead and copper monitoring in 2008. Exceedence of the lead action level will require Chateau Du Lac to perform water quality parameter monitoring and to revert to full-scale monitoring for at least two consecutive six-month rounds in 2009. Also, public education information will need to be provided to your customers. More detailed information regarding this exceedence and subsequent action that will be required will be provided to you in a separate letter.

If you have any questions, please call me at the number provided below.

Sincerely,

Michael F. Prysby P.E., District Engineer
Field Operations Section
Lansing District Office
Water Bureau
(517) 335-6122

Subject: Re: Chateaux Du Lac lead and copper report form

Hi Bob, I just saw the results - 115 ppb for lead is a bit high, any major issue, outside hose bib, basement slop sink, vacant home, etc? Since this is an annual round of monitoring which ends 9/30/08, there is still time to collect more samples and possibly bump this one out - I would suggest a minimum of 5 more samples. Since compliance is based on the 90th percentile, the 9th highest sample would count, 20 samples total would be the 18th highest for the 90th, and so on. Otherwise we're back to water quality parameters and lead public notice. Let me know if you have any questions.

thanks,

Adam Rosenthal, EQA

GOVERNOR

DAN WYANT
DIRECTOR

June 19, 2012

Mr. Larry Carter
5454 Gateway Boulevard
Flint, Michigan 48507

Dear Mr. Carter:

Subject: Chateau Du Lac Condominiums WSSN 01353
Lead and Copper Monitoring - Action Level (AL) Exceedance

The Chateau Du Lac Condominiums exceeded the AL(s) for lead during the most recent round of lead and copper monitoring of drinking water taps from June 1 to September 30, 2011, as summarized below.

Contaminant	AL	90% of samples at or below this level	Number of samples above the AL
Lead	15 parts per billion (ppb)	26 ppb	1
Copper	1.3 parts per million (ppm)	0.085 ppm	0

An AL exceedance is not a violation, but triggers other requirements under the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. Requirements include water quality parameter (WQP) monitoring, source water monitoring, corrosion control treatment, and public education.

Deliver Customer Notice of Lead Result

Recent changes to the Lead and Copper Rule require you to provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected, within 30 days of learning of results. You must also send us a certification that you met all the delivery requirements along with a sample copy of your customer notice. These items were received October 26, 2011.

Distribute Public Education (PE)

A certificate that the PE materials were distributed to all consumers was received. Repeat each year until the lead AL is no longer exceeded. This material is intended to educate consumers about lead health effects, sources, and steps to minimize exposure. Note that the PE material must include information about the exceedance in your water supply, information about what you are doing to reduce lead levels, information about lead service lines in your distribution system, and information about the history of lead levels in your water supply.

Conduct WQP Monitoring
Water Quality Parameter monitoring was completed December 2011, in which two WQP samples were collected 24 hours apart from the entry point to the distribution system and two samples 24 hours apart from 57 Chateau Du Lac Drive in the distribution system. The WQP samples were analyzed for pH, alkalinity, calcium, conductivity, and temperature. Continue sampling for WQP during each lead and copper monitoring period until at least 90% of lead and copper tap results meet both ALs.

To order bottles, call the Department of Environmental Quality (DEQ) laboratory at 517-335-8184, or download the form EQP 2301 *Requisition for Water Sample Units* from http://michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining the Necessary Sampling Units, and test list. The tests are analyzed from one sample bottle per location. Request the analyses using the following test codes:

Test Code	Cost (as of 06/15/2007)	Bottle Number	Test Description
CORR	$51.00	33	Conductivity, Alkalinity, Phosphate, and Calcium
CPH	$13.00	33	pH Determination

Conduct Source Water Monitoring
Source water monitoring was conducted in December 2011. Repeat every third year until both lead and copper ALs are met during the entire three year period.

Correct the Problem
Minimize lead and copper in drinking water by reducing corrosion of water pipes and household plumbing that contain lead and copper. To accomplish this, you must propose a corrosion control treatment plan or propose to perform a corrosion control study by July 31, 2012. If treatment is found to be necessary, it must be installed and samples collected to ensure the lead and copper ALs are consistently met. Contact us for guidance on corrosion control options.

Lead and Copper Monitoring
You are not required to conduct lead and copper tap monitoring until after you install corrosion control treatment. However, at your option, you may conduct additional rounds of monitoring. If the action levels are met during future rounds of monitoring, you may discontinue the corrosion control study and installation of treatment. If the lead action level is met in two consecutive six month monitoring periods, you may discontinue your public education activities. It is recommended that you collect another round of lead and copper tap samples during the January 1-June 30, 2012, monitoring period. Select the same sites used in previous monitoring periods, giving Tier 1 sites first priority. Within 30 days of learning of results, provide individual lead tap results to people who receive water from sites that were sampled, even if lead was not detected. All monitoring, reporting, customer notification and DEQ certification requirements remain in effect.

Consumer Confidence Report (CCR)
Include this AL exceedance in your CCR, which is due to our office, your customers, and the local health department, by July 1, 2012. Also include the following statement in the CCR, regardless of the lead and copper levels:

> *If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Chateau Du Lac Condominiums is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at http://water.epa.gov/drink/info/lead.*

What's Next?
If you can show that both lead and copper ALs are met in two consecutive six month periods, then many of the requirements outlined in this letter will no longer apply. However, in the meantime, you must propose a corrosion control treatment plan or propose to perform a corrosion control study. If treatment is found to be necessary, it must be installed. We will work with you to complete these corrosion control steps to optimize your corrosion control treatment.

Timetable of Requirements

Complete By	Requirement	Comments
Right away	Deliver *Customer Notice Of Lead Result* to persons served at each site tested within 30 days of knowing the result.	Download *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Word or PDF format from http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms.
November 30, 2011	Collect WQP samples.	Collect 2 samples at least 24 hours apart from each entry point to the distribution system. Collect 2 samples at least 24 hours apart from the distribution system. Repeat each lead and copper monitoring period until both ALs are met.
November 30, 2011	Perform PE activities including delivering PE materials to all consumers.	PE required activities are listed in enclosed template and checklist. Repeat every year until the lead AL is met in the most recent round of sampling.
December 10, 2011	Send us certification of PE compliance along with a sample copy of the materials delivered.	Sample certification enclosed. Required whenever PE required.
December 31, 2011	Send us certification of customer notice of lead result compliance along with a sample copy of the notice delivered.	Download *Lead and Copper Report and Consumer Notice of Lead Result Certificate* in Word or PDF format from http://michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, and Reporting Forms.
March 31, 2012	Collect one lead and copper sample from each entry point to the distribution system.	Repeat every third year until both ALs are met for the whole 3 year period.

Complete By	Requirement	Comments
July 31, 2012	Submit a proposal for optimal corrosion control treatment or a corrosion control study.	Contact us for guidance on corrosion control options. Corrosion control study and treatment installation may cease if both ALs are met during 2 consecutive 6 month monitoring periods.
Between January 1 and June 30, 2012	Collect 10 samples from the distribution system and have them analyzed for lead and copper.	Report the results to the DEQ and deliver the customer notice of individual lead results using the downloadable *Lead and Copper Report and Consumer Notice of Lead Result Certificate*.
July 1, 2012	Report the 2011 AL exceedance in the Consumer Confidence Report.	Specific lead health effects language must be included.

We recognize that the Lead and Copper Rule is complex and may be confusing. We will continue to offer assistance in implementing these regulations.

Mr. Larry Carter
Piper Realty Company
5454 Gateway Blvd
Flint, Michigan 48507

Dear Mr. Carter:

Subject: Chateaux Du Lac Condominiums; WSSN: 01353
Lead and Copper Monitoring of Drinking Water Taps

We received your report for the monitoring period June 1, 2010, through September 30, 2010.

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	# of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 parts per billion (ppb)	14 ppb	1	5	6/1 and 9/30/2011 Submit results to this office by October 10, 2011
Copper 1.3 parts per million (ppm)	0.080 ppm	0		

Ninety percent of the sites you tested are within action levels under the administrative rules promulgated under the Michigan Safe Drinking Water Act, 1976 PA 399, as amended. These results must be reported on your 2010 Consumer Confidence Report (CCR) due to our office, your customers and the local health department by July 1, 2011. Also include the following statement in the CCR, regardless of the lead and copper levels:

> *If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Chateaux Du Lac Condominiums is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.*

You must also provide individual lead tap results to the people who receive water from sites that were sampled, even if lead was not detected. This is a new requirement under United States Environmental Protection Agency revisions to the Lead and Copper Rule of October 10, 2007.

The new rule requires you to deliver notices of lead results to customers within 30 days of learning of each individual result and to deliver a certification that delivery requirements were met along with a sample copy of your customer notice to this office within 3 months of the end of the monitoring period. A template and certificate is downloadable in Microsoft Word and PDF formats from www.michigan.gov/deq. Click on Water, Drinking Water, Community Water Supply, Reporting Forms, and *Lead and Copper Report and Consumer Notice of Lead Result Certificate*.

Samples due the next monitoring period mark your second annual round of monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria. We strongly encourage you to sample early in the monitoring period.

Bottles will NOT be mailed automatically. To order bottles, call the Department of Environmental Quality laboratory at 517-335-8184 or download the form EQP 2301 *Requisition for Water Sample Units* from www.michigan.gov/deq. Click on Key Topics, Laboratory Services, Drinking Water, Obtaining the Necessary Sampling Units, and test list.

Sincerely,

Adam Rosenthal, EQA

PUBLIC SERVICE ANNOUNCEMENT

Recent tests of distribution system tap water show that some homes in Chateaux Du Lac, exceed the federal government's limit for lead. Therefore, the Chateaux Du Lac Water System has begun a program to reduce lead in drinking water. Since much of the lead contamination of drinking water comes from individual home plumbing systems, there is action you can take in your home.

Please call your water utility operator in charge at 517-548-7363 for information on how to reduce exposure to lead in drinking water and how to have your home's water tested for lead.

Your lead and copper test results for 23 Chateaux Du Lac Dr are:

Copper	150 ppb	Maximum Contaminant Level is 1,300 ppb
Lead	115 ppb	Maximum Contaminant Level is 15 ppb

Thank you

Robert H. Stucker

Flint, MI 48507

WSSN: 01353
Chateaux Du Lac Condominiums

Dear Mr. Carter:

SUBJECT: Lead and Copper Action Level Exceeded for Chateaux Du Lac Condominiums

The United States Environmental Protection Agency (USEPA) has established action levels of 15 parts per billion (ppb) for lead and 1300 ppb for copper. Chateaux Du Lac Condominiums has exceeded the action level for lead during the monitoring period from June 1, 2008 to September 30, 2008. Lead and copper sampling was conducted on September 2, 2008. The results are outlined in the table below:

Samples: 5 required / 5 collected, for the Monitoring Period of: June 1, 2008 – September 30, 2008

Results:	Lead		Copper	
Action levels	15	ppb	1300	ppb
90th percentile	**59**	**ppb**	**75**	**ppb**
Average	24	ppb	30	ppb
Maximum	115	ppb	150	ppb
Minimum	0	ppb	0	ppb
Action Level Exceeded	**1**	**Sites**	**0**	**Sites**

The Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the Administrative Rules promulgated there under (Act 399) requires the following steps to be taken in response to the lead exceedance:

Distribute Public Education Notice / Public Service Announcement

Rule 325.10410 (1) of Act 399 requires that public education with specific educational language on the health effects of lead, must be mailed or delivered to all residents of Chateaux Du Lac Condominiums within 60 days of the exceedance. **Therefore, Chateaux Du Lac Condominiums was required to deliver the public education to every customer no later than November 2, 2008.**

Our records show that the Public Education Notice/Public Service Announcement was completed as required and the Certificate of Distribution was received December 12, 2008. As a reminder, this information must be redistributed by June 30, 2009. Please submit the Certificate of Distribution to this office by July 10, 2009

Enclosed is mandatory language for a Public Service Announcement / Public Education Notice with information regarding the health effects of lead. Also, enclosed is a Certificate of Distribution. Please indicate the method of delivery, sign, and date the Certificate of Distribution (retain a copy for your records) and return a copy as noted above.

The Public Service Announcement / Public Education Notice must be repeated every 6 months, as long as action levels are still being exceeded. Please note that new customers must receive a copy of the public education when water service is established.

Report the Lead and Copper Exceedances in the 2008 Consumer Confidence Report (CCR)

In addition to distributing the public education notice described above, the exceedance for lead must be included in the Water Quality Data section of your 2008 CCR which is due to our office, your customers, and the local health department by July 1, 2009.

You must include the following informational statement regarding lead:
"Infants and young children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing. If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water. Additional information is available from the Safe Drinking Water Hotline at 800-426-4791."

Conduct Water Quality Parameter (WQP) Monitoring

Sampling for several water quality parameters (WQP) is required every six months. This includes two samples (collected at least 24 hours apart) from the point of entry to the distribution system after treatment, and two samples (collected at least 24 hours apart) from one location in the distribution system. This location must be representative of water quality throughout the distribution system.

WQP samples were collected on November 29, 2008 and November 30, 2008 in response to the Lead exceedance as discussed with your contract operator, Mr. Robert Stucker. **The next set of WQP samples must be collected by June 30, 2009.**

WQP monitoring includes measurements for pH, alkalinity, calcium, conductivity, and temperature. The pH and temperature must be measured at the time of sample collection for the most accurate results. However, you may have the pH measured at a nearby laboratory or the State lab. To order bottles from the State lab, call 517-335-8184. If using the State lab in Lansing, use the following test codes for requesting the required sampling:

Test Code	Cost (as of 1/1/05)	Bottle Number	Test Description
CORR	$51.00	33	Conductivity, Alkalinity, Phosphate, and Calcium
CPH	$13.00	33	pH Determination

The above tests are analyzed from one sample (or from one bottle, number 33).

The results of Lead and Copper monitoring, and WQP monitoring, are to be reported on the attached reporting form.

Conduct Source Water Monitoring

The requirement for sampling lead and copper in the source water was also completed on November 29, 2008 and November 30, 2008 in response to the Lead exceedance.

Correct the Problem

The presence of lead and/or copper is an indicator of corrosive water. If two consecutive six month rounds of sampling results are below the action levels for both lead and copper, your system will be considered to have optimized corrosion control and not be required to take the steps below. However, Act 399 requires that when a water system exceeds either the lead or copper action level, an optimal corrosion control program must be developed to correct the problem.

In response to the previous lead exceedance noted in a letter dated April 26, 2005, Chateaux Du Lac Condominiums sampled into compliance, however the 1st annual round of monitoring exceeded the action level for lead. Therefore, based on the 2005 and 2008 exceedances, an optimal corrosion control program must be developed under one of the options below.

A.) Make a proposal to this office by September 30, 2009 for an optimal corrosion control treatment program. By December 31, 2009 we will either approve the plan, require you to do a study, or designate some other corrosion control plan. If we require a study, it must be completed within 18 months after we request it.

B.) You can propose that you do a study to determine the best method of optimal corrosion control for your system. The proposal to do a study must be made by September 30, 2008. Once the proposal is accepted by this office, you will then have one year to complete the study and recommend a treatment option to us.

Once a treatment plan has been approved by our office, you will have one year to install the treatment equipment and an additional year to collect follow-up samples. Using that data, our office will designate optimal water quality control parameters under which your system must operate. At that time, you will continue with regular lead and copper sampling.

Please note that although continued lead and copper sampling is not required by Act 399 until after corrosion control treatment has been installed, we recommend that you continue to sample every six months in conjunction with your WQP monitoring. With proper sampling techniques and site selection, Chateaux Du Lac Condominiums may find that lead and copper levels will be below action levels in the future. Remember that if Chateaux Du Lac Condominiums can show that lead and copper levels are below the action levels during two consecutive six month monitoring periods, then many of the requirements outlined in the this letter will no longer be applicable. If Chateaux Du Lac Condominiums plans to continue lead and copper sampling, the next round of five samples must be collected by June 30, 2009.

Following is a table which outlines your requirements for the next year.

Time Period	Requirement	Comments
By June 30, 2009	Issue Public Service Announcement and Public Education Notices	Notices must be mailed/delivered to every customer
By July 10, 2009	Forward a signed copy of the Public Education Notice and Certificate of Distribution to this office	
By June 30, 2009	Collect Water Quality Parameter (WQP) samples	Collect 2 samples (collected 24 hours apart) from the point of entry to the distribution system. And collect 2 samples (collected 24 hours apart) from one location in the distribution system.
By July 1, 2009	Report the lead exceedance in the 2008 Consumer Confidence Report	
By September 30, 2009	A.) Propose an Optimal Corrosion Control Program or B.) Propose to do a study to determine the best method of corrosion control	
Every 6 Months	Collect Water Quality Parameter (WQP) samples	Collect 2 samples (collected 24 hours apart) from the point of entry to the distribution system. And collect 2 samples (collected 24 hours apart) from one location in the distribution system.
Every 6 Months	Public Service Announcement	The Public Service Announcement must be repeated every 6 months.
Every 6 Months	Forward a signed copy of the Public Education Notice to this office	Signed copies of the public education notice are due to our office 10 days after you deliver the annual notices

We recognize that the Lead and Copper Rule is complex and may be confusing. We propose a conference call with you and your operator before the end of June 2009 to discuss further. We will continue to offer assistance in implementing these regulations.

If you have any questions, call us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

Dear Mr. Carter:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **January 1, 2007 through June 30, 2007**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	15 ppb	1	5	**June 1 and September 30, 2008** Submit results and reporting form by October 10, 2008
Copper 1.3 ppm	0.14 ppm	0		

ppm = parts per million ppb = parts per billion

Your results are less than the action levels stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended. If your 90th Percentile is greater than zero and/or you have one or more samples Above the Action Level, these results must be reported on your *2007 Consumer Confidence Report* due by July 1, 2008.

Samples due during the next period mark your first round of annual monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria.

Enclosed are report and bottle ordering forms for your next round of monitoring. Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

FOR Michael F. Prysby, P.E., District Engineer

Flint, MI 48507

WSSN: 01353
Chateaux Du Lac Condominiums

Dear Mr. Carter:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **July 1, 2006 through December 31, 2006**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	12 ppb	1	5	**January 1 and June 30, 2007** Submit results and reporting form by July 10, 2007
Copper 1.3 ppm	0 ppm	0		

ppm = parts per million ppb = parts per billion

Your results are less than the action levels stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended. If your 90th Percentile is greater than zero and/or you have one or more samples Above the Action Level, these results must be reported on your *2006 Consumer Confidence Report* due by July 1, 2007.

Samples due during the next period mark your **second consecutive 6 month** round of monitoring. Please make every attempt to select the same sites used in the previous monitoring period, giving Tier 1 sites first priority. If original sites are unavailable, select replacement sites based on the Tier 1, 2, and 3 criteria.

Enclosed are report and bottle ordering forms for your next round of monitoring. Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

FOR Michael F. Prysby, P.E., District Engineer

Howell, MI 48843

WSSN: 01353
Chateaux Du Lac Condominiums

Dear Mr. Stucker:

SUBJECT: Lead and Copper Monitoring - For Compliance with the Michigan Safe Drinking Water Act

We received your report for the monitoring period: **June 1, 2004 through September 30, 2004**

Action Levels	Results this monitoring period		Next monitoring period	
	90th Percentile	Number of Samples Above Action Level	# of Samples Required	Take Samples Within These Dates
Lead 15 ppb	20 ppb	1	**5**	**1/1 and 6/30/2005** Submit results and reporting form by July 10, 2005
Copper 1.3 ppm	0.035 ppm	0		
Raw Water Monitoring (one sample from each well)			**2**	**Same as above**
Water Quality Parameters - 2 sets (only required if an AL is exceeded)			**4 (2 distribution and 2 POE)**	**Same as above**

ppm = parts per million ppb = parts per billion

Your results for lead is greater than the action level stated in the Michigan Safe Drinking Water Act, 1976 P.A. 399, as amended. Since your 90th Percentile for lead is above the Action Level, these results must be reported on your *2004 Consumer Confidence Report* due by July 1, 2005.

The federal Lead and Copper Rule requires that water quality parameter (WQP's) samples must be collected when the action level is exceeded. Two sets of WQP's were collected from the distribution system and the well house as required on January 17th and 18th, 2005. The WQP samples should have been collected within the same monitoring period as the lead/copper samples, however Chateau Du-Lac was not notified until after the monitoring period ended, thus there will be no penalty assessed for the system.

You will have to collect a lead and copper sample from each well along with the distribution monitoring this sampling period.

Public Education material must be distributed to all residents of the facility within 60 days of the date of this letter. A sample public education brochure with the mandatory language was

E-mailed and is enclosed for your use. This public education material must be distributed to your residents every 12 months, as long as the lead action level is exceeded. Also enclosed is a copy of an affidavit to be included in your federal tracking file at this office. Please indicate method of delivery, sign, and date the form (retain a copy for your records) and return a copy to this office.

We encourage you to continue attempting to sample back into compliance. Compliance is achieved after 2 *consecutive* full rounds are below the action levels. The next round of sampling is between January 1 and June 30, 2005. You will have to collect 5 samples and have them analyzed for lead and copper during that time frame.

Enclosed are report and bottle ordering forms for your next round of monitoring. Please sample early in the monitoring period. If you have questions, please call us at the numbers below.

Sincerely,

Michael F. Prysby, P.E., District Engineer

From: Adam Rosenthal
To: Bob Stucker
Date: 1/12/2005 2:59PM
Subject: Chateau Du Lac

Hello Bob, I finally had a chance to write some lead/copper result letters and realized that Chateau Du Lac exceeded the Action Level for Lead. The 90th percentile calculated to be 20 ppb and the AL is 15 ppb. I do not recall whether we spoke about this situation before or not, at any rate I need to find out if you tested for any water quality parameters, and if so please send me copies. These parameters should have been tested in the same monitoring period as the original samples were collected.

If samples were not collected, please perform the following ASAP.

Collect Water Quality Parameters, (WQPs) in the distribution system, at the Point of Entry, (POE) and distribute Public Education about Lead.

You will need to order 4 unit 33 bottles, then collect 2 samples from your POE collected 24hrs apart, and 2 samples in the distribution system collected 24hrs apart. These samples will be tested for pH, alkalinity, calcium, conductivity, orthophosphate, and temperature. Temp is taken at the time of the sample, and if you have meters for any other parameters you can test those yourself also.

Enclosed is our lead/copper reporting form with instructions and the public education you will need. Please fill out the WQP page and send a copy to us when you get your results.

Let Mike or me know if you have any questions,

LEAD AND COPPER MONITORING
for compliance with U.S. EPA lead and copper regulations

We have received your report for the June 1, 1997, to September 30, 1997, monitoring period.

RESULTS:

90th percentile for lead:	8.5	ppb
90th percentile for copper:	90.0	ppb

These results do not exceed the action levels of 15 ppb for lead or 1300 ppb for copper.

We have received your report for the June 1, 1998, to September 30, 1998, monitoring period.

RESULTS:

90th percentile for lead:	0.0	ppb
90th percentile for copper:	75.0	ppb

These results do not exceed the action levels of 15 ppb for lead or 1300 ppb for copper.

NEXT MONITORING PERIOD: October 1, 1998 to September 30, 2001

Samples required: Lead/Copper Monitoring: 5 distribution sites sampled analyzed for lead and copper.

Comments: Samples must be collected during June, July, August, or September of the same calendar year. Samples due by 2001 mark your first round of reduced triennial monitoring.

Enclosed are report forms and bottle ordering forms (bottles will NOT be mailed automatically). Please sample early to avoid last minute problems. If you should have any questions, please feel free to contact William Smith.

Subject: Lead/Copper Monitoring
Chatuau-Du-Lac Condominiums

Dear Ms. Cummings:

This letter is a reminder of your monitoring requirements for the Lead & Copper Regulation for the fourth monitoring period (1/01/95-6/30/95). As we discussed during our September 15, 1994 meeting and in our September 26, 1994 letter, a second series of "Water Quality Parameter" (WQP) sampling must be conducted. This will consist of collecting samples twice from one distribution system location and twice from your point-of-entry location (clubhouse basement) prior to June 30, 1995. The specific WQP samples were discussed in our previous letter.

Next, we have not heard from you or the condominium association as to which direction this supply will proceed towards achieving optimal corrosion control. The owner of this supply, however, is responsible for achieving optimal corrosion control. To be in compliance with this regulation, our department must be informed as to what course of action will be taken towards completing this objective. Several alternatives were discussed in our previous letter.

Finally, the results of your third round samples showed that both action levels were not exceeded. Thus, you will be eligible to forgo the public education program and the corrosion control study if a second acceptable round can be obtained. If either action level is exceeded, steps towards optimal corrosion control must continue as detailed in our previous letter.

Specifically, you will need to collect five samples for lead and copper from your participating residents. This sampling round must be completed by June 30, 1995.

PRINTED ON RECYCLED PAPER

Arrangements have been made for the lead and copper sampling units to be sent to you. You should receive these bottles in several weeks.

If you have any questions about this regulation, please call me immediately at (517) 335-8605.

Sincerely,

Michael Prysby

Michael Presby
Michigan Department of Public Health
3423 North Martin Luther King Jr. Blvd.
P.O. Box 30195
Lansing, MI 48908

Dear Mr. Presby,

I am writing on behalf of the Chateaux Du Lac Condominium Association, in reference to the corrosion control study that you and I discussed at our meeting of September 15, 1994. At this date in 1994, it is difficult to make any binding statements reference what a future management company and or condominium Association Board of Directors will do in the future regarding a possible study. The study, as I understand it from our September meeting would be necessary for the Association to initiate based upon the results of our water quality parameter tests that are currently being taken and the last round of lead and copper samples obtained from Mr. Bill Freas.

My assumption is that the Board of Directors will be cooperative regarding restrictions that may be placed on them by the EPA, but I am not in a position currently to make any binding statements for a Board that may or may not be in office in 1996.

To date we have provided cooperative efforts in the sampling as we have been required, and at the point we are notified of our need to conduct a study I will certainly provide that information to the Board of Directors.

Thank you for your on-going diligence in this matter, and we will wait to hear from you regarding the latest sampling.

Sincerely,

Kay Cummings Bushey
Cummings Property Management

VERNICE DAVIS ANTHONY, MPH, Director

September 26, 1994

Mrs. Kay Cummings
Chateau Du Lac Condominiums
c/o Cummings Management Company
1119 Ranfield Lane
Flint, Michigan 48532

WSSN: 1353

Dear Mrs. Cummings:

This letter confirms my visit on September 15, 1994, with you and Bill Freas. The purpose of the visit was to discuss Chateau Du Lac's second round of lead and copper monitoring.

Specifically, the calculated 90th percentile for Chateau Du Lac was 49.0 parts per billion (ppb) for lead and 105.2 ppb for copper. Although your supply met the copper action level of 1300 ppb, the 15 ppb action level for lead was exceeded.

Since your supply exceeded the lead action level, "Water Quality Parameter" (WQP) monitoring needs to be conducted. The first round of WQP monitoring will need to be completed prior to December 31, 1994. WQP monitoring shall consist of collecting samples twice from one distribution system location and twice from your point-of-entry location (clubhouse basement) during each six month monitoring period. Each set of WQP samples must be done on separate dates.

WQP monitoring shall include measurements for pH, temperature, calcium, alkalinity, and conductivity. In addition, an analysis for orthophosphate and silica must be conducted if these are utilized as part of your current treatment technique. pH and temperature must be measured at the time of sample collection for the most accurate result. pH may be measured at a nearby laboratory provided that the temperature of the sample can be held constant and the analysis can be completed within 30 minutes of sample collection. WQP monitoring shall be repeated in the next six month monitoring period (January 1, 1995 - June 30, 1995). Finally, one sample for a lead and copper analysis will need to be collected from each well prior to December 31, 1994. The appropriate sampling containers were sent to you several days prior to this letter, please call me if you do not receive them.

Next, the supplier of water must provide public education materials to each customer. A sample public education brochure with the mandatory language that must be mailed to each water user was sent to you prior to our meeting. This brochure was then distributed to each resident prior to the September 10, 1994, or 60 day deadline following the end of the round in which the lead action level was exceeded. This public education brochure must be mailed to your water users every 12 months as long as the lead action level is exceeded.

Next, enclosed is a timeline that outlines future responsibilities under this regulation. Specifically, this supply will be required to evaluate and identify "optimal corrosion control treatment" (OCCT). We would recommend that you retain a consultant who specializes in corrosion control for assistance. You may also choose to repeat the lead and copper monitoring in the next period (July 1 -December 31, 1994) to see if the results confirm the need to pursue OCCT. If, however, two consecutive six month monitoring periods comply with the action levels for lead and copper, you may forego installing any treatment. However, you may not delay the implementation of treatment beyond the times that are indicated on the schedule if subsequent monitoring confirms the corrosivity of the water. In addition, the two rounds of WQP monitoring are still required if you choose to repeat the lead and copper monitoring in the subsequent monitoring periods. Any subsequent monitoring shall include both lead and copper.

Next, the regulation will require you to make a recommendation to us as to your course of action towards achieving optimal corrosion control. Several alternatives are discussed below:

1. Recommend to our department by December 31, 1994, as to what corrosion control treatment plan you intend to follow. Our department will either approve the plan, will require you to do a study, or designate some other type of corrosion control.

2. You can indicate to us by December 31, 1994, that you intend to conduct a corrosion control study. Our department can then accept the proposal and you then have until December 31, 1996, to complete the study and make a recommendation to us for corrosion control.

3. You may also choose to begin treatment prior to actually completing a study or making a proposal for OCCT. This treatment would likely be a trial and error method but should utilize the facts obtained from your WQP monitoring, available equipment and chemical manufacturers, and the assistance from your consultant. As always, a construction permit is required prior to making any additions or changes in your treatment process. Also, any chemical that is used must be approved for use under ANSI/NSF Standard 60.

The lead and copper regulation is extremely complex and confusing. Hopefully, this letter provides you with some guidance. We look forward to assisting you further in meeting the requirements of this regulation. If you have any additional questions regarding this or any other water related matter, feel free to call me at (517) 335-8605.

Very truly yours,

Michael Prysby

Subject: Legionellosis Outbreak Investigation

Hello Team,

The executive summary regarding the Legionella outbreak is appreciated, but I don't know if there is consensus that it is over. We have been collaborating with our local, state and federal partners regarding the next steps and efforts to improve methods to obtain adequate clinical and environmental isolates.

Genesee County has had three confirmed Legionella cases, since the beginning of May 2015. The most recent cases on 6 /1/15 and 6/2/15 have provided sputum samples to McLaren Hospital for analysis. We have discussed concerns regarding the hospitals' lack of success isolating the bacteria and MDCH and CDC have expressed interest to assist with the process.

Below is a brief summary of the recent cases.

Patient #1 MDSS 7117888505 Patricia Schaffer, 408 Sharon Dr. Flushing, MI 48433. Ms. Schaffer is 81 years old. She was admitted to McLaren Hospital on 4/18/15 and discharged on 4/29/15. She returned to McLaren on 5/4/15 and was diagnosed with Legionella. McLaren attempted, but was unable to collect an adequate respiratory specimen. Ms. Schaffer does not receive Flint water at her residence.

Patient #2 MDSS #7208825131 Robert Skidmore, 576 Melrose Ln., Mt. Morris, MI 48458. Mr. Skidmore is 84 years old. He was admitted to McLaren Hospital on 5/13/15 and discharged on

5/19/15. He returned to McLaren on 6/1/15 and diagnosed with Legionella. Mr. Skidmore does not receive Flint water at his residence.

Patient #3 MDSS 7202952890 Gradine Rogers, 2314 Barth Street, Flint MI, 48504. Ms. Rogers is 74 years old. She was admitted to Hurley Hospital on 2/8/15, and discharged on 3/1/15. Hurley Hospital receives Flint water. Ms. Rogers went to McLaren on 5/29/15 and was diagnosed with Legionella. She resides approximately 2-3 miles North of McLaren Hospital. She receives Flint water at her residence. Her son, Dr. Antrick Johnson indicated that she has been ill since returning home from Hurley Hospital on 3/1/15. He also mentioned that there has been low water pressure events at their residence.

GCHD is prepared to collect environmental samples, as previously discussed, but without the clinical isolate the environmental samples may not have much value.

If there are recommendations, questions or concerns, please reply to the group, as we all have different roles with the investigation.

Thanks Jim

Subject: Flint, Michigan - Legionellosis Outbreak Investigation Summary

Good Afternoon,

As we enter summer (finally) here in Michigan, I wanted to share a summary of the analysis of the data around this past year's increase in legionella cases identified in proximity to the city of Flint. As you'll recall, while there were no clinical specimens available for testing from the 45 cases included in the investigation, there was a significant outreach to gather more patient information from cases. I've attached an executive summary of the investigation and analysis to this post.

Please feel free to contact us is you have any questions,
Jim

A conference call sounds great. We have a good rapport with the hospitals and some details of their activities. McLaren sampled, identified Legionella and hyper chlorinated, which brought most levels to "less than 1". Hurley has increased filtration (reverse osmosis) and ion exchange in certain areas, but are not sampling. I'll try to get an update of their activities on Monday.

Have a good weekend.

Subject: Flint Drinking Water TTHM Standard Violation - 2nd quarter 2015

Attached is a copy of the Violation Notice and Public Notice Template being mailed to the City of Flint by the DEQ Office of Drinking Water and Municipal Assistance regarding an exceedance of the Maximum Contaminant Level (MCL) standard for Total Trihalomethanes at certain locations within the City's drinking water distribution system.

This violation notice is in response to updated monitoring completed in May 2015, which shows the locational running annual average for one of the City's eight compliance sampling locations continues to exceed MCL standard of 0.080 mg/L. It is however, important to note that all individual compliance sample results collected in both May and February were below the 0.080 mg/L levels.

You are being provided an electronic copy of this notice as exceedance of this drinking water standard is expected to generate inquiries from water system customers, news media, and the general public.

Sarah Howes or Maggie Pallone will be informing members of the Michigan legislature.

If you have any questions or would like any additional information, you may contact Michael Prysby, District Engineer, DEQ-ODWMA at 517-290-8817, or you may contact me at the number below.

Jeff,

The table you sent me, prepared by the city, is not correct. We will send you a copy of the table with the addresses that correspond to the correct site codes.

Mike,

I received the attached info from the City. I wanted to confirm the right numbers are lined up with the right sample sites since we had problems with that before and also because I thought you told me Salem Housing was the highest location at site 7. However, we have Salem housing as site 6.

Please let me know if the attached table is correct compared to your records.

Mr. Brent Wright, Operations Supervisor
City Of Flint – Department of Public Works
Flint Water Plant
4500 North Dort Highway
Flint, Michigan 48505

WSSN: 02310

Dear Mr. Wright:

SUBJECT: Total Trihalomethanes (TTHM) **Return to Compliance**
3rd Quarter 2015 Monitoring Period

The Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA), records show that the city of Flint (City) has returned to compliance with the Safe Drinking Water Act,1976 PA 399, as amended (Act 399); R 325.10610, *Maximum contaminant levels for disinfection byproducts (MCLs)*, of the 1979 Administrative Code.

In accordance with R 325.10610, *MCLs*, of the 1979 Administrative Code, the MCL for disinfection byproduct TTHM is 0.080 milligrams per liter (mg/L) as a Locational Running Annual Average (LRAA) at each monitoring location. As listed in the table below, our records show that the City's highest TTHM LRAA, based on the last four quarters, ending August 31, 2015, is 0.062 mg/L which meets the standard. All eight sample site locations meet the LRAA standard of 0.08 mg/l.

Our investigation consisted of a review of ODWMA files for laboratory reports received for compliance monitoring. Our investigation is considered complete. The return to compliance began on August 31, 2015, and will continue as long as the TTHM LRAA remain below the MCL at all sample sites.

TTHM Results (mg/L)						
	11/20/14	2/17/15	5/18/15	8/18/15	LRAA	OEL
DBP1 McDonalds 3719 Davison	0.059	0.0162	0.0514	0.0755	0.050	0.055
DBP2 Liquor Palace 3302 South Dort Highway	0.033	0.0168	0.0635	0.0532	0.042	0.047
DBP3 North Flint Auto 6204 North Saginaw St.	0.041	0.0149	0.0452	0.0426	0.036	0.036
DBP4 University Market 2501 Flushing Road	**0.094**	0.0245	0.0598	0.0706	0.062	0.056
DBP5 Taco Bell 3606 Corunna Road	0.034	0.0151	0.0547	0.0619	0.042	0.049
DBP6 Rite-Aid Pharmacy 5018 Clio Road	0.054	0.0192	0.0605	0.0595	0.048	0.050
DBP7 Salem Housing 3216 MLK Boulevard	0.050	0.0285	0.0727	**0.0903**	0.060	0.070
DBP8 BP Gas Station 822 South Dort Highway	0.036	0.0199	0.0461	0.0549	0.039	0.044

We are pleased with the corrective measures that the city has taken, including the installation of granular activated carbon (GAC) at the water treatment plant (WTP) as recommended in the Operational Evaluation Reports. Installation of the GAC played a major role in reducing the TTHM LRAA below 0.080 mg/L at all eight locations. We encourage the city to continue to implement corrective measures discussed in Operational Evaluation Reports from December 2014, February 2015, and May 2015 as a means to maintain compliance with the TTHM standard.

Further, the TTHM operational evaluation level (OEL) calculated in accordance with R 325.10719l, *Disinfection byproducts: operational evaluation levels*, of the 1979 Administrative Code, remained below the 0.080 mg/L OEL trigger at all eight sample site locations. Since the OEL has been met for a second consecutive quarter and that the peak month for TTHM levels was met, the city will not be required to provide our office with an updated OEL Report.

The city may proceed with providing a public notice (PN) to their customers of the return to compliance. While the city meets the LRAA at all eight sites, the individual TTHM concentration exceeded 0.08 mg/l at one location (0.09 mg/l at DBP 7 – Salem Housing 3216 MLK Boulevard) during the August 2015 sampling event. Although this individual result does not cause an exceedance of the LRAA at this site, the city encouraged to include discussion of this result in their return to compliance notification to city residents.

We encourage the city to utilize the same routes of notification, by mail or direct delivery **and** by any other means reasonably calculated to reach customers not normally reached by mail. The City is also encouraged to include additional information regarding its response efforts that resulted in the return to compliance. **Please send us a signed and dated copy of the notice that you issued within ten (10) days of distributing the PN**. Finally, as a reminder, the TTHM violation must also be included in your 2015 Consumer Confidence Report, due by July 1, 2016.

We anticipate and appreciate your continued cooperation in resolving this matter. If you have any questions regarding this letter, please contact us at the numbers below; at prysbym@michigan.gov; or rosenthala@michigan.gov; or at DEQ, P.O. Box 30242, Lansing, Michigan 48909-7742.

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

City of Flint Has Returned to Compliance

Our water system recently returned to compliance for total trihalomethanes. As our customers, we will inform you as to the corrective measures that were taken to return to compliance.

We routinely monitor for the presence of drinking water contaminants. Samples were collected for total trihalomethanes (TTHM) analysis from eight locations on a quarterly basis (November 20 of 2014 and February 17 & May 18 & August 18 of 2015). The average of the results at **ANY** of the eight locations must not exceed the maximum contaminant level (MCL) for TTHMs, otherwise our water system exceeds the MCL. The standard for TTHMs is 80 micro grams per liter (µg/L). The location reporting the highest TTHM level was 62 ug/L; thus, our water system has returned to compliance with the TTHM MCL.

For more information, please contact Mr. Brent Wright at 517-787-6537, or the Flint Water Plant at 4500 North Dort Highway, Flint, Michigan 48505.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

This notice is being sent to you by the City of Flint.

CERTIFICATION: WSSN: 02310

I certify that this water supply has fully complied with the public notification requirements in the Michigan Safe Drinking Water Act, 1976 PA 399, as amended, and the administrative rules.

Signature	Title	Date Distributed

Reminder to water supplier: This notice/certification must be sent to the Department of Environmental Quality.

Subject: Flint Lead

Steve,

Ron Fonger left me a voicemail concerning questions he has concerning the lead issue in Flint. Specifically, he is aware of the increased discussion of lead in Flint's drinking water and the home tests recently performed at residents request in corroboration with V Tech and concerned groups. Ron discussed this issue w. Mr. Kroft and has the impression that the DEQ has had discussions with the city about the lead issue; however, Mr. Kroft declined to discuss the issue any further. Mr. Fonger wishes to discuss with the DEQ as to what discussions the DEQ has had with the city concerning the lead issue. Our only discussion (written) that I am aware of...is our 90% PB/CU letter sent to the city and the need for the city to install optimal corrosion control. Should I return his call or pass this on to Brad?

Flint, Michigan 48505

WSSN: 02310

Dear Mr. Wright:

SUBJECT: City of Flint – Water Supply
Return to Compliance Total Trihalomethanes (TTHM)
3rd Quarter 2015 Monitoring Period

The Department of Environmental Quality (DEQ), Office of Drinking Water and Municipal Assistance (ODWMA), records show that the City of Flint (City) has returned to compliance with the Michigan Safe Drinking Water Act,1976 PA 399, as amended (Act 399); R 325.10610, *Maximum contaminant levels for disinfection byproducts (MCLs)*, of the 1979 Administrative Code.

In accordance with Administrative Rule 610 (R 325.10610, *MCLs for disinfection byproducts*), the MCL for the disinfection byproduct TTHM is 0.080 milligrams per liter (mg/L). Compliance is determined based on a Locational Running Annual Average (LRAA) at each monitoring location. As listed in the table below, our records show that the LRAA all eight of the City's TTHM compliance sampling sites now comply with this standard based on the last four quarterly monitoring periods, ending August 31, 2015. This return to compliance regarding TTHM's began on September 1, 2015, and will continue as long as the LRAA at each of the City's TTHM compliance sampling sites remain below this standard.

TTHM Results (mg/L)						
	11/20/14	2/17/15	5/18/15	8/18/15	LRAA	OEL
DBP1 McDonalds 3719 Davison	0.059	0.0162	0.0514	0.0755	0.050	0.055
DBP2 Liquor Palace 3302 South Dort Highway	0.033	0.0168	0.0635	0.0532	0.042	0.047
DBP3 North Flint Auto 6204 North Saginaw St.	0.041	0.0149	0.0452	0.0426	0.036	0.036
DBP4 University Market 2501 Flushing Road	**0.094**	0.0245	0.0598	0.0706	0.062	0.056
DBP5 Taco Bell 3606 Corunna Road	0.034	0.0151	0.0547	0.0619	0.042	0.049
DBP6 Rite-Aid Pharmacy 5018 Clio Road	0.054	0.0192	0.0605	0.0595	0.048	0.050
DBP7 Salem Housing 3216 MLK Boulevard	0.050	0.0285	0.0727	**0.0903**	0.060	0.070
DBP8 BP Gas Station 822 South Dort Highway	0.036	0.0199	0.0461	0.0549	0.039	0.044

Corrective measures by the City have been successful in achieving compliance with this standard. These measures have included replacement of anthracite filter media with granular activated carbon as well as the optimization of water treatment plant and distribution system processes and operations as recommended through Operational Evaluations conducted by the City. It is important that the City continue to follow these recommendations in order to limit disinfection byproduct formation and maintain compliance with the MCL LRAA standards. While the MCL LRAA standard has now been met at all eight compliance sampling sites, an individual TTHM concentration above 0.080 mg/L was measured at one location, DBP 7, during peak month sampling in August 2015.

The DEQ encourages the City to continue informing customers about this updated water quality information and compliance with the TTHM MCL standard.

If you have any questions regarding this letter, please contact us at the numbers below; at prysbym@michigan.gov; or rosenthala@michigan.gov.

September 3, 2015

Mr. Dan Czarnecki, Public Works Director
City of Fenton
301 South Leroy Street
Fenton, Michigan 48430

WSSN: 2270

Dear Mr. Czarnecki:

SUBJECT: 2015 Sanitary Survey; City of Fenton Water System

This letter confirms my visits with Mr. Steve Guy, Water Plant Superintendent, on April 27, 2015 and May 28, 2015 and with you on May 20, 2015.

Below is a summary of the subsequent review and discussion of the water supply facilities serving the City of Fenton (Fenton) water system. The purpose of the meetings was to evaluate the water system with respect to the requirements of the Michigan Safe Drinking Water Act, 1976 PA 399, as amended (Act 399) and the Administrative Rules adopted from Act 399. In addition, the enclosed Water System Sanitary Survey was updated to gather information on the Fenton water system.

Our updated survey visit confirms that Fenton completed rehabilitation of Well #5. The work included overhauling the pump and motor, chemical cleaning of the well screen, and replacement of the drop pipe. A variable frequency drive controller was also installed. Based upon the pump installation report, Well #5's original capacity has been restored. This work demonstrates Fenton's commitment towards maintaining investment in its groundwater source. We encourage Fenton to maintain a proactive well maintenance program on all four production wells. The next wells due for routine maintenance in the next one to two years include Wells #7 and #8.

The following table summarizes our findings from our survey of the water system:

Survey Element	Findings
Source	Recommendations made
Treatment	Recommendations made
Distribution System	Recommendations made
Finished Water Storage	Recommendations made
Pumps (All dist. Pumping)	Recommendations made
Monitoring & Reporting	Recommendations made
Management & Operations	**Deficiency Identified**
Operator Compliance	No Deficiencies/Recommendations
Security	No Deficiencies/Recommendations
Financial	Recommendation made
Other	Not applicable

The following deficiency is a violation of Act 399 and must be resolved in order to return the water system to compliance.

R 325.11203 of the Administrative Rules of Act 399 requires Type-I public water supplies to conduct a water system Reliability Study (RS) and update the study every five years. The city has been requested to update their most recent RS (2005 Drinking Water Revolving Loan Project Plan) on several occasions and it is our understanding that an updated RS is being prepared and a draft copy will be provided to us for review and comment. Fenton will re-achieve compliance with R 325.11203 following our review and approval of the updated RS.

Next, it is hoped that the following recommendations will prove useful in enhancing the operation and maintenance of your water supply.

1. Update Fenton's most recent (2008) water system General Plan (GP) by January 1, 2016. The updated GP needs to include the following information in accordance to the revisions in the Michigan Safe Drinking Water Act's Rules.

    - General layout of the entire waterworks system, including distribution system piping and the location of valves, hydrants, storage tanks, and master meter connections.

    - A hydraulic analysis of the distribution system showing pressure contours under peak demands and inventory of watermain by size, material, and age. The hydraulic model used in the updated RS can be used for the GP. The hydraulic model needs to reflect the water distribution system's current configuration and include the most recent improvements.

    - Service area map including existing and future service area boundaries.

    - Water System Capital Improvement Program (WSCIP) for the 5-year and 20-year planning periods. The WSCIP should be based upon recommended improvements that are presented in the updated RS.

2. Since both the RS and the GP need to be completed within the next six months and they contain overlapping elements, it may be worthwhile to update them concurrently.

3. Re-implement Fenton's Wellhead Protection Program (WHPP). Fenton's WHPP approval status expired on January 2, 2015. Given the resources and effort put forth to establish the program, we encourage Fenton to re-establish the program and maintain all WHPP activities. For further information and/or assistance in re-implementing the WHPP, please contact Mr. Jason Berndt from our Community Drinking Water Unit at (989) 705-3420.

4. Install meters in the remaining un-metered governmental buildings in the downtown area. A fully metered system will help to further refine future un-accounted water use (loss) determination.

    We also recommend that Fenton upgrade their metering system to a radio-read system. A full radio read system is a significant water system improvement, as it significantly reduces the time needed to conduct routine meter reads and allows water utility operators to focus on other O&M programs. Radio read also enhances leak detection

and improves customer service by providing the water utility the ability to inform customers of leaks and other abnormal conditions.

5. Operate the stand-by power generators under load for each production well on a yearly basis to confirm proper operation of all the electrical components. This practice also helps water utility operators remain familiar with the procedures in switching to and from stand-by power generation.

6. Pursue full electrical surge protection for the main pumping components at the water treatment plant (WTP). This provision will increase the operating reliability of the WTP, help avoid costly repair to the electrical components, and minimize disruption of routine treatment plant operation.

7. Repair or replace the aeration unit's air-intake screens. These screens are essential in preventing insects and other foreign objects from entering the aerator unit. Routine inspection of the intake screens and repair/replacement on an "as-needed" basis is essential in maintaining the sanitary integrity of the aeration system.

8. Deterioration of the treatment plant's solids contact unit epoxy coating system was noted. Replacement of the epoxy coating system on each contact clarifier is recommended within the next one to two years. The city shall obtain an Act 399 construction permit for this work. The new epoxy coating system must be an approved product under ANSI/NSF Standard 61 suitable for contact with potable water.

9. Continue to work towards expanding the WTP filter maintenance program to include a broad scope of filter investigation techniques. This should include:

    - General filter inspections
    - Review of water quality and operational information
    - Filter media expansion measurements
    - Gravel mounding measurements
    - Free board to media measurements
    - Box excavations (media profile)
    - Core sampling and media examination

    WTP operators continue to gain operating experience and knowledge unique to this facility. Further filter preventative maintenance activities will continue to increase their familiarity with overall treatment plant maintenance. Finally, filter media cleaning (recommended by Utility Services) should also be completed. If the city proceeds with filter media cleaning, the procedure to clean the filters will need to be reviewed and approved by our office.

10. Inspect filter gullets and clearwell as individual treatment trains are taken out of service as part of routine operation. Any cracks that are discovered should be properly repaired to prevent cross connection. A more comprehensive inspection of the clearwell should be completed within the next one to two years.

11. Adjust the treatment plant's fluoride (FL) dosage to meet the recently revised optimal FL concentration in drinking water of 0.7 parts per million (ppm) as established by the US Department of Health and Human Services. Dosages should be based on Fenton's raw water fluoride concentration.

12. Sodium Hexametaphosphate and Orthophosphate are added for filter aid and corrosion control treatment respectively; however, Page 5 of the monthly operation report (MOR) reports total phosphate (PO4) applied in pounds and milligrams per liter (mg/l). Each compound; however, shall be reported separately in the MOR. Also, the total phosphate concentration in mg/l shall be monitored at the plant tap and distribution system and reported in the MOR. The minimum monitoring frequency for total phosphate should be weekly at the plant tap and at distribution system locations in conjunction with total coliform monitoring.

13. Recoat the exterior portion of both ground storage tanks and repair the roof hatch hinge based on Utility Service's recommendations. Also, tank site visits should be conducted by water operators on a weekly basis to check tank appurtenance (vents and overflows) and security conditions.

14. Provide stand-by power and upgrade telemetry control at the Adelaide Road pump station to improve the level of water service for residents in the Jane Hill Subdivision.

15. Establish a comprehensive valve operation and maintenance program. An active valve program helps to keep valves in good operating condition, reduces interruptions in service during emergency repairs, and reduces water loss and property damage. Given the number of isolation valves in the water distribution system, we recommend establishing a segmented approach (prioritize valve turning by quadrants). This methodology has worked well for other water utilities and allows most isolation valves to be operated over a four to five year period. Fenton is encouraged to implement this approach as a means to expand their valve program.

16. Update the 2010 Bacteriological Sampling Site Plan. The updated plan needs to reflect changes in system contacts (local and DEQ). A bacteriological sampling site plan template was provided to the water utility and can be used for preparing an updated plan. A copy of the updated sampling site plan needs to be provided to the Department of Environmental Quality (DEQ) for review and approval.

Please submit a letter by September 30, 2015, that outlines Fenton's plans and schedule to address the above items.

If you have any questions, feel free to contact me at (517) 290-8817; prysbym@michigan.gov; or Department of Environmental Quality, Office of Drinking Water and Municipal Assistance, Lansing District Office, 525 West Allegan Street, 1st Floor South, P.O. Box 30242, Lansing, Michigan 48909-7742.

Sincerely,

Michael F. Prysby, P.E.

Steve,

Below is the information that Robert compiled concerning number of schools served by Flint and their service line material. I couldn't the Goggle map application to open...it will be interesting to compare the listing of schools from LHD's lead sampling.

Mike please find attached of list of what I believe to be all the active school buildings in Flint. Also there is a google map of their location. Hope this is what you're looking for if you need anything else please let me know and I will try to help in any way I can.

aroberts@cityofflint.com has invited you to view the following map.

Michael,

Attached is the flow schematic for the Flint WTP....the schematic shows UV disinfection; however, this is not in place....and the operators are using lime for softening. Soda ash is not being used at this time.

I'm out of the office tomorrow, so if you've been able to track down a schematic of the Flint's treatment plant, perhaps you can forward it to Mike Schock in Cincinnati? His email is schock.michael@epa.gov.

If not, I'm back in the office on Monday and maybe you can steer me toward the City to obtain a schematic. I'll check in with you then.

Thank you all.

Jennifer

Subject: question for ORD/Mike Schock
Importance: High

Tom P told me that your Director, Dan Wyatt, asked that his staff work with ORD/Mike Schock and Darren Lytle. Mike and Darren are both working on getting up to speed on the basics of the Flint water treatment scheme. I had a request from Mike Schock this morning about information about treatment and various sample results for Flint. So, I sent them the final OEL report from Flint that is on their website. as well as the 5 MORs that are also on Flint's website.

Mike had an additional question; he's looking for a schematic of the Flint treatment process to help him evaluate the possible successfulness of phosphate treatment at Flint. See Mike's brief explanation below.

I don't want to make this a big project if it's not handy; would Mike Glasgow have this schematic?

Thank you all! I know your time is very valuable right now.

Jennifer

Cc: Lytle, Darren
Subject: RE: more pdfs

Jennifer;

Thank you so much!

Would you happen to know if any other report has, or that you might have somewhere, a currently-valid process schematic for the entire set of treatments done at the Flint plant? It would be helpful to have a better picture of where things like softening, type of coagulant and GAC fit into the picture. There are several potential interrelationships that would affect the successfulness of the phosphate treatment proposed and dosage, and the instability cause by the major chemistry change from Detroit finished water (which I understand was from their Lake Huron-fed plant).
