Subject: RE: # of kids =>6 w elevated BLL

We are following up to provide clarification on this at the 3PM this Thurs. I think it is ok to mention on the Case Management call too. That way, the GCHD hear the same message from us and we reiterate it with them.

I think it would be kids age 6-17 with EBLs capillary or venous, going back to April 2014, for the high risk zip codes 01-07, consistent with the current list. My understanding, based on an email from Rashmi, is that this will be re-visited on the 3pm Thursday call.

Rashmi, is that accurate, and do you have thoughts about what you want us to share with Genesee on our weekly Case Management call tomorrow? Should we hold off on this discussion until you can talk about it on Thursday?

Bob needs to know specifically what new people go on the list. Does he include kids age 6-17 for all of Genesee county with BLL=>5 going back to April 1, 2014? Assuming yes, does that also mean he needs to add kids under age 6 for the rest of Genesee County? (Right now that list of about 180 kids only is for the 7 Flint zipcodes. Also, who will communicate with GCHD and Karen in your shop about these changes?

Thanks for letting us know.

Thanks, Martha. So, given that this amounts to about 15 kids at the most over the course of 2 years, we would recommend to GCHD the following:

-We (Bob Scott) will provide kids 6-18 yrs in the defined zip code and add those to the list already provided to the GCHD

-For those kids requiring case management, GCHD will provide case management, bill Medicaid (for those kids who are on Medicaid), and then use the money we sent via the contract for any differences in costs that are not covered.

-I just confirmed with Sue that this would be our recommendation

Next steps:

-We will discuss with GCHD on our next call

-Martha and Nancy will connect with Bob on adding those kids (6-18 yrs) on the list

-Nancy will connect with Karen about educating the nurses at GCHD about this "change"

If anyone has any questions on the recommendations above, please let me or Nancy know.

Thanks,

Rashmi

Subject: # of kids =>6 w elevated BLL

As per our discussion just now, in 2014, 913 kids age 6 -17 were tested in Genesee and 6 had a BLL =>5. (This includes Flint and is whole year, not april-Dec)

For Flint alone in 2014,428 were tested and 5 had BLL =>5 in 2014. (i.e. 5 of the 6 elevated lived in flint)

For 2015 through November, 1,197 were tested in Genesee and 10 were elevated.

For flint alone in 2015, 765 were tested and 8 were elevated.

I hope this helps.
