Cc: McKane, Patricia (DCH); Fink, Brenda (DCH); Larder, Cristin (DCH)
Subject: RE: State data confirms higher blood-lead levels in Flint kids

I spoke with Cristin. I have extracted a file from the Warehouse with all tests for Genesee County, age <16, January 1, 2010 – August 31, 2015. I sent the file to Cristin just a few minutes ago.

We talked about which test to use—I had been using the first elevated test (≥ 5 , whether venous, capillary or unknown) and Cristin will probably do the same). Once Cristin has geocoded all records to identify which are in City of Flint and which are out-county, she can then slice and dice them as appropriate.

I'll be happy to help in any way I can.

Bob is assembling a list of questions, info he needs to share with/obtain from Epi to do a data pull. Can we get in the same room, perhaps around 11:30 or 12?

Subject: Re: State data confirms higher blood-lead levels in Flint kids

Dear Brenda,

After seeing Gongwer on Friday AM, I contacted Corinne to understand what was going on, Linda Dykema and Angela later pulled in Epidemiology. I come out of environmental health (cut my teeth on superfund site in a politically complex area) and can appreciate sensitivity on multiple fronts, as well as appreciating the analyses of data at the local level (well done).

It would benefit all of us for epidemiology staff to be pulled in as quickly as possible in the future, so that Patti and I can assist Cristin, that we can weigh in on design issues, and we can make sure that we are not at cross purposes when Angela requests a response. Cristin's response will take some time.

Cristin and I discussed an approach on Friday before we received the report from Angela with the updated counts. We will take a look this AM and revise our approach.

<FinkB@michigan.gov> wrote:

Obviously this is uber high profile---so we just need to be sure we're about the data, which as you and Sarah likely know, is under a lot of scrutiny because some of the local folks have different data (done differently, lots of issues---- just this involves people who care deeply about the community, Larry Reynolds who is now on our IM Exec Team, etc) I'm just saying sensitivity to the local people who are so concerned about the babies there based on what they have for data is a context that is important, beyond the high profile and other issues . My comment has nothing to do with the data itself. Just the context of very concerned people. Doesn't impact our data . . . obviously. It's just there's a people side to this issue that sometimes gets lost when something becomes so politicized. Just for us, I guess.

I've asked our lead epidemiologist to look at the data closer than what was in the charts to get a handle on this. The epi is Cristin Larder.

Peeler, Nancy (DHHS)

From: Scott, Robert L. (DCH)
Sent: Tuesday, September 29, 2015 8:45 AM
To: Peeler, Nancy (DCH)
Subject: RE: State data confirms higher blood-lead levels in Flint kids

It seems reasonable to me. The "remove subsequent tests for that child" is a toughy, I'm sure. I don't have any suggestions for making the process any simpler.

I expressed my concern yesterday to Cristin that they are counting EBLI kids again if they show up in a subsequent year. If I understood correctly, it's because they want to avoid any suggestion of undercounting. I'm certainly willing to go with their judgment.

Nancy

Cristin has been working all day on this. We are working together right now and expect to be doing so for a while this evening. We are committed to getting monthly proportion of tested positive graphic for each region (high risk, other flint, other Genesee) for 0-6 year olds for tomorrow am review by Corinne – we will forward when comfortable it is correct.

To do this, we are having to identify tests on a monthly basis for the denominator, up until (and including) the first incidence of high EBLI in the year. Then remove subsequent tests for that child in the rest of the calendar year. The whole thing starts over the next calendar year. We are in a maze of do-loops right now.
