Subject: Talking Points for Monday

- Dr Mona H-A concerned about/focused on ensuring there is a system to in place to support long range follow up of Flint area children. The system needs to include tracking, enhanced services (such as referral to Early On for young children) , coordination of enhanced services, provider awareness, etc.
- MSU Flint, College of Human Medicine, MSU College of Human Medicine and MSU Ext resources supporting Mona's work by providing scientific and technical resources, nutritional recommendations and cooking demonstrations, brainstorming how to address long- term planning, etc. Dr Wells has been a part of a few of these meetings as well. MDHHS has reviewed and is reviewing the educational resources being developed by Mona's group and MSU Extension.
- MDHHS working with Hurley/Dr Mona H-A to execute data use agreement that would allow MDHHS to exchange lead screening data with Hurley. Data will be used for GIS mapping and identification of case clusters etc. This will enhance efforts to accelerate testing/case management of at risk families, it also provides data that can be used for long range follow up of children.
- MDHHS scheduled to meet MDE in early January to discuss coordination between health system and educational system in support of long range follow up.
