We will pass this information on to GCHD as they get Case Management activities underway, so they can be sure to build discussions about filters into those contacts/visits.

So we have a total of 147 names, and of those 147, 28 names matched and we can confirm a filter was distributed to the residence at the address.

80% (n = 119) of addresses on the list **do not have filter**

20% (n = 28) do have a filter.

Correct?

I completed the data comparison this weekend. The first tab has a summary and the second tab lists the addresses with and without filters.

Hi Nancy,

Thank you for the list. I was out of the office all day. I will compare the list with our data and identify the addresses that have a filter and the addresses that don't. I should have it done this weekend.

Thank you for the data,
 Kris

Hi Kris – attached is the file of addresses and Guardian names we have associated with children for whom our data indicates elevated blood lead levels. I am hoping to touch base about the best way to compare this list with your database of who has received filters. You had indicated (a week ago?) that your area could do the comparison – is that still true, or how can we assist?

Nancy Peeler, Manager
 Early Childhood Health Section

Please see attached. I removed two lines where most recent address is not in one of the seven zip codes (i.e., family moved).
