Subject: one-pager

Epi is running data for # of tests and # of tests ≥ 5 micrograms per deciliter between January 1, 2013 through April 14, 2014 for Flint residents in these age groups:

Children < 6 years old
Children 6 through 17
Adults who are 18 and older.

I spoke with Michelle Bruneau and she will make changes to the one-page summary once we have the numbers (hopefully by 5 PM or shortly thereafter today). Michelle thought it would be better to have context for the three age groups that are already shown on the one-page summary rather than focusing on children < 6 only. (As mentioned, Eden was fine with the proposal when I spoke with her this afternoon.) Michelle will make the changes and you can see if they are helpful.

In terms of the two Zips that are in the summary but not in the trends, the numbers were too small to be included in the trend line. It makes sense to include them in the summary though because they do show some testing activity.

Corinne
