Hi everyone - Eden, I think we're good with your suggested verbage, just wanted to confirm that we had used that phrase you had suggested.

With all the emails, it's hard to track the status of this, so let's check in:

1. Eden, are you OK with the edits we made to version 5? (see attached). If no, other areas for edits/suggested edits?
2. If yes, then Communications, are you OK with version 5?

Just to confirm my verbage, this is from CDC: Lead can be found in many sources. Lead-based paint and the dust produced as it deteriorates, found mostly in older homes built before 1978, are major contributors of lead exposure in U.S. children. Lead can also be found in some water pipes inside the home or pipes that connect homes to the main water supply pipe. Lead found in tap water usually comes from the decay of old lead-based pipes, fixtures or from leaded solder that connects drinking water pipes.

Subject: RE: Drinking Water

Next version, edits on page 1:

- 'What causes lead poisoning?' paragraph 1 is shortened to make space for other content - Same section, paragraph 2 uses Eden's text "drinking water if supplied by lead pipes"
- Same section, paragraph 3 talks about where your child spends time and lead hazards

Regarding follow up after a test showing an elevated level, we have a great document from another source that we will borrow from to go along with the rest of our toolkit. Our staff is working on that now, may take a few days.

Will wait to hear back on approval for this edited version before we do anything with it.
