I suspect there may have been excessive runoff and storm water discharges with the weather we have been experiencing, but you will have to ask the Water Resources Division for details. If a release or overflow is unusual or not expected, both we and the systems should get contacted through the PEAS contact lists.

We expect surface water treatment plants to be capable of treating their source adequately from a microbial standpoint regardless of deteriorating source water quality.

One answer to his question is that any time a system is unable to meet drinking water standards or suspects there may be a water quality problem as a result of an unexpected event (spill, pressure loss, etc.), they are required to notify the consumers and provide appropriate precautionary advice. So no news should be considered good news.

We can talk more next week.

Subject: FW: Call from MI citizen in Flint

The citizen, Mr. Lathan Jefferson, contacted Mindy Eisenberg at Headquarters. I will follow up with you all next week at her request. Mike, if I could get copies of the lab analyses for regulated contaminants and their MOR for the new Flint water, I'd appreciate it. Richard and Mike, Mindy is wondering if there were any contaminant releases recently into the Flint River? See my response below.

I will talk with Mike, Pat and Richard next Monday and get the analyses from Mike, and send to you next week.

Thank you again, Mindy.

Thanks Jennifer,
I told him that I would make some calls to find out what is going on and then would get back to him.
He mentioned that he was on his way to talk with the Flint treatment plant, so we'll see how that goes.

Hi, Mindy. Thank you for listening to him. Mike Prysby, the DEQ district engineer who oversees Flint water treatment and distribution, doesn't have Flint's Monthly Operating Report yet, but he has results from Phase 2/5 and other required contaminant analyses (required to meet so the plant could be put on-line), and health standards are being met, he said. I will ask Mike to send me copies of their Phase 2/5 results and the MOR, and his analysis. I didn't specifically ask about any contaminant releases, but DEQ has historically been consistently reliable in reporting to us any contaminant releases—but I will ask Mike that also. Richard Benzie is out of the office til Friday or Monday, but I will be in Lansing auditing set-asides next Monday, so I will touch base with him also.

Pat Cook is the DEQ drinking water treatment expert, who Lathan Jefferson talked to at MI DEQ this week. Pat Cook was out of the office at training so I was unable to find out what he told Mr. Jefferson. Mr. Jefferson refused to take Mike Prysby's phone number, which is why he didn't mention Mike's name to you.
