Subject: KWA violation notices

Importance: High

I started typing this and then lost the email..... anyway, see attached violation letter sent via email to a bunch of folks, and being sent certified to John O'Brien tomorrow am.

: Violation Notice S-4005 and S-4006

Importance: High

Attached is a letter with notices for violations of soil erosion regulations for both pipeline contracts. Temporary erosion measures must be put in place immediately to avoid further fines. Part 91 of Act 451 will take priority over pipe installation. As the County Enforcement Agency administrator for Lapeer I cannot allow KWA excavation contractors to sediment the waterways of Lapeer County.

Subject: RE: KWA SESC

I've been out of the office for a week. Violation letters were on my agenda before then.

I am in process of writing violation notices for two sections of the project right now. I have a

lot of concern that the contractors are barreling through with pipeline installation and not installing SESC measures where needed and not completing restoration in a timely manner.

I met with our road commission engineers in mid - August, as they have taken a lot of complaints about road conditions. I wrote a violation notice for the section on Clear Lake Rd then. And the contractor immediately started working on the restoration issues. So I thought we were moving in the right direction.

Now I am seeing my staff's inspections for both sections/contractors with big problems. My staff have recently taken photos of areas where no SESC measures are installed on Clear Lake and King Mill Rds. I'll be recommending pipeline installation cease until SESC measures are installed where needed and restoration has caught up.

I've not once heard from Spicer. --- Or seen a Spicer person on any site.

Subject: FW: KWA SESC

Dorothy,

My understanding is that the firm (Spicer) providing construction oversight of the KWA line has generally been satisfied with the implementation of SESC measures by the contractors. Does your office have concerns regarding the installation and maintenance of SESC measures on this project?

Thanks.

Chris
