I've beefed up the first paragraph on the 1986 Amendment to the SDWA that banned the use of high lead content solder and materials. I didn't include a statement about the date it was in effect in Michigan (June, 1988) because that has more applicability to an explanation of the LCR and how Tier 1, high risk sites were identified. If it's too late to insert, I wouldn't worry about it.
