Subject: Request for Monitoring
Attachments: Request for WQ Monitoring 10-31-12 wb-swas-reqform_247026_7 (1).doc

Attached to this message is a request for Water Quality Monitoring for WRD consideration. We believe this proposal provides an opportunity for collaboration between the PWSS and NPDES programs in our Source Water Protection Program. The monitoring locations suggested are intakes for drinking water systems whose source for the most part are water bodies prioritized for next year's WQ monitoring program (with the exception of Ann Arbor).

The specific parameters recommended are some of the emerging contaminants identified by EPA for monitoring by select drinking water systems over the next 3 years. We believe sampling these drinking water sources for these emerging contaminants will provide an opportunity for source water protection efforts should they be detected.

Be aware that this monitoring will not replace any required monitoring, as many of these systems will not be included in EPA's UCMR3, and those that may be selected will be conducting monitoring after treatment, not from untreated sources.

If you have any questions or would like to discuss this proposal or possible modifications, please feel free to contact me.
