Subject: Flint of City Water

Hello, I saw that you were copied with Lois and I's emails back and forth. I have a few questions that actually can be answered via email. I am writing a paper for my political science class here at Delta. I need to contact a state or local official about my topic.

I was on Facebook and saw a few high school football teams had pitched in a were hand delivering water to neighborhoods in need. Are you aware of those schools? If so, which ones? Any rough estimate of the number of cases of water that have been dispersed?

How do officials and government employees affect this problem? What is your role in this and if anything does this affect your job? Any other affects??

I was reading in an article that the final draft that was given to the MDEQ for the water treatment for the city was ambiguously worded. Reading this it sounds crazy to me to think that something so important was overlooked and is now causing so much trouble. Any input from you on this?

Thank you,
Abby K. Colston
