Subject: RE: DHHS samples

So we need to put a hold on those reports?

Subject: DHHS samples

Anastasia and Kirby,

I just got done speaking with Linda about a home in Flint that will be undergoing a review by DHHS to determine the source of lead exposure in the home.

DHHS will be pulling the water samples and for the purposes of this investigation DHHS is the client. There will be 6 samples total 3 first draws and 3 flushes. These samples should be paid for using the funding source that was set up for Flint residents.

Please note that these samples are a sort of Hybrid and do not fit into the norm of the regular Flint samples. They should have the regular paperwork that would go with any routine samples and they should also get the regular routine 1 Liter bottles that would be used in everyday situations. We will evaluate this process afterwards to determine if there is a better way to handle future investigations that DHHS might do.

Anastasia,
 Can you please provide the coding information to Linda so that DHHS can include that on the paperwork?

Kirby,
 DHHS will be delivering these samples to the DEQ Lab. Please expedite these samples and let me know when the results are complete. I want to have a discussion about the results with Linda before the reports are released.

Thanks to all,
 George

Subject: Spread Sheet for Freeman Elementary Lead and Copper Results
Attachments: Freeman Elementary Final Lead and Copper Results.xlsx

Importance: High

Attached is the spreadsheet for Freeman Elementary. Please note that the Lead Results and the Copper Results are on different tabs.

Heather will take a stab at reconciling the naming convention between the report and the spreadsheet to make it generic and easily understood to the lay person. We can then meet as a group to discuss.

Thank you!
George
