Hi, Lois. The attached list is supposed to be addresses with no public water connections, according to a map from Tim Davidek with the Genesee County Drain Commissioner, Division of Water & Waste Services. The map is also attached. I do need to make sure the analysis has low enough detection limits to detect potential contaminants that exceed drinking water standards. Our site assessment work is funded by the EPA and therefore we have to use their CLP labs, which can do trace level analysis.

Hi John:

You and I talked a few weeks ago about historical drinking water sampling in the vicinity of Container Specialties in Flint.

I only knew of a couple of possible drinking water well locations there because nearly everyone else on our list had connected to community water.

Which drinking water well locations are planned to be included in your September/October 2015 round?

Do you want to have me coordinate the sampling with Genesee County Health Department as part of our annual contract?

If not, which lab are you using? I need to make sure that drinking water samples are analyzed (assuming voc analyses) using the 524.2 method and not the Environmental Lab's 8360 method.

Hi, Mike. Just a heads up that we are planning some res well sampling in September or October (November if needed) this year and need to coordinate with you during the planning and execution of the sampling as well as communicating with well owners once we have results. We will be conducting a site inspection of the Container Specialties Inc. site at 3261 Flushing Road, Flint, which will include soil, waste, and groundwater sampling. FYI
