Subject: Re: Technical Advisory Team Information

Andy,

We just recently converted to the new method with no flushing, the vast majority were done with the old procedure. Our original expectation focused on the thought of a new standard being put in place statewide for uniformity but eventually, through conversations with Darren Lytle we made the decision to convert in advance of any potential statewide changes.

Howard,

For clarity, of those hundreds of samples how many are with the flawed sampling method and how many are done with the appropriate sampling method?

Thanks,

Andy

Marc,

I believe that we agree with that message, we are planing to pursue all of the people who were sampled under the previous protocol and request that they submit to another round of testing with the new procedures. We have generated hundreds of samples this year and we intend to aggressively reach out to everyone for retesting. We are building a campaign that will continue to caution people about taking safe measures for drinking water but also produces neighborhood sampling pools that test several times throughout the course of the year in addition to tier 1 pools.

No one should be told that if their water tested safe using the old MDEQ protocol, that it is ok to drink. I thought we learned that lesson already. The old sampling protocol is flawed.

Best Regards,

Marc

Subject: Re: Technical Advisory Team Information

Andy,

We changed the instructions late last week that called for flushing, all bottles are now going out with the new protocol attached. We are concerned that some people are still not removing filters from the tap so we are trying to focus on that aspect of communication as well.

Hi Howard,

Can you confirm when Flint will move away from the testing mode that includes flushing?

Thanks,

Andy

Howard:

Thanks for arranging the meeting today. I didn't catch all of what Natasha (and others) said on the line but I was intrigued when I heard her mention a fact sheet or some information on Lead that was taken from a city in MA. Can you/she forward that URL for our review and consideration?

During the last call, I also noted my concern regarding boil advisories during a lead emergency and wanted to provide a link that documented what I said about Lead (and nitrates for that matter) being concentrated upon heating.

http://water.epa.gov/drink/guide/upload/book_waterontap_full.pdf

Lastly, I couldn't hear who made the comment, but I agree that infants are likely the most vulnerable of concern. So, I was wondering if the clinicians/health practitioners in the room might consider partnering or spearheading an outreach effort to target expectant mothers with the Filters that are being provided. Not sure if this is best done via prenatal clinics, delivery hospitals, OB-GYN departments, or lactation management specialists, etc. The public health practitioners might also be able to use this emergency as another reason to advocate breastfeeding (vs infant formula).

Thanks,

Mike
