No, do not worry- let me do the talking---there is still AN ASSOCIATION but doesn't reach a statistical significance.... and further analysis is STILL happening. Further we will also say that we cannot say it is all due to water...WE ARE STILL ON TRACK FROM YESTERDAY---there is an 18% increase in high risk zips, EPI-TALK

Subject: RE: Talking Points

I am confused, can you say this in plain English for me because when I read that there is not a statistical significance to the change in the numbers I am wondering if everything we were saying yesterday is wrong.

Eden,

More analysis and review has been done by Sarah's staff. Here are the talking points:

The high risk Zip codes (48503 and 48504)

Blood lead level rates among children under six years of age in the high risk Zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water ($p < 0.0001$). After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County ($p < 0.0001$).

Thus, compared to rates during 2010-2013, the rates after the switch to Flint River water in the high risk Zip codes increased 18 percent, although this difference did not reach statistical significance.

Other Zip codes in Flint

Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water ($p < 0.0001$). The magnitude of the elevated rate remained roughly the same during the period after the water source switch.

Subject: RE: Talking Points

Importance: High

2 things:

- Leaded gasoline has been banned for use in road vehicles since 1996, so it's not likely that Flint kids would be exposed that way
- The sentence "Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply" is not completely accurate and could be challenged. On the call with EPA today I heard that maybe 50% of the city's lead supply lines are lead.. these are outside the house and would include the portion of the run owned by the resident and the portion owned by the city water supply.

Subject: Talking Points

Corinne and Mikelle:

Attached please find the most recent Flint talking points which include edits from Dr. Wells. A 12:30 meeting with the gov's comms team was just called, so we need to have them finalized and ready to share asap.

Can you please send me the bullet points explaining the data – or what is ready of them – by noon?

Thank you,

Jennifer (Smith) Eisner
