

- All clients with blood lead levels $>5\text{mcg/dl}$ should be referred to case management (insert phone number- GCHD?)
- Providers should inquire about use of a drinking water filter and/or bottled water in all clients residing in city limits.
- Healthcare providers should inquire about other potential sources of lead in the household per current recommendations (see: https://www.michigan.gov/documents/mdch/testing-screening071009_287511_7.pdf)
-
- The enhanced lead testing guidelines should be followed until the public health advisory is no longer in effect, as determined by the Genesee County Health Department.

Subject: RE: draft for lead testing by providers in Flint

Yes, we need to run it by the health department. I mentioned in an earlier e-mail that the provider reference sheet (based on AAP guidelines) that is on the Flint water website indicates referral to case management. It would be helpful, I think, to have a phone number for providers so they can contact case management. They should already have this number for the LHD but repetition is not a problem in relation to some of this information.

Eden- are these guidelines recommended for all children (not just Medicaid) regardless of their insurance? If so, perhaps we need a statement to that effect.

Linda---looks like we still need links added, can you have someone on your team add.

We should ask GCHD to weigh in before we disseminate.

Provider letter going as a HAN, right?

Medicaid offered to send as an L letter also.

Subject: RE: draft for lead testing by providers in Flint

Dear Flint Healthcare Provider,

Michigan Medicaid Early Periodic Screening, Diagnosis and Treatment (EPSDT) guidelines require children to be tested for blood lead poisoning at 12 months and 24 months, and between the ages of 36-72 months if not previously tested (<http://www.mdch.state.mi.us/dch-medicare/manuals/MedicaidProviderManual.pdf>). Due to the enhanced public health issue of an increased risk for lead exposure in the City of Flint, **providers are advised to follow enhanced guidelines for lead testing in children:**

- Providers should screen all children aged 0-6 years of age exposed to Flint city drinking water after April 2014. Note: this includes all children younger than 1 year and children between the ages of 3-6 years.
- If the child has already been screened within the time period of April 2014-present by a capillary test, healthcare providers should follow-up on any elevated levels >5mcg/dl to ensure confirmatory venous testing is conducted.
- Providers should inquire about use of a drinking water filter and/or bottled water in all clients residing in city limits.
- Healthcare providers should inquire about other potential sources of lead in the household per current recommendations (see MI Testing Strategy document xxxxxxxxx)
- The enhanced lead testing guidelines should be followed until the public health advisory is no longer in effect as determined by the Genesee County Health Department.
- Resources are available at:xxxxxxxxxxxxxxxxx and www.michigan.gov/flintwater

Subject: draft for lead testing by providers in Flint

Before being sent to communications committee, a draft--thoughts?:

Dear Flint Healthcare Provider,

Current lead testing is required for all Medicaid and WIC recipients at ages 1 and 2 years statewide. Due to the enhanced public health issue of an increased risk for lead exposure in the City of Flint, healthcare providers enhance screening for lead poisoning:

- Providers should screen all children aged 0-6 years of age exposed to Flint city drinking water April 2014.
- This recommendation is expanded to include Flint children aged younger than 1 year and children between the ages of 3-6 years.
- If the child has already been screened within the time period of April 2014-present by a capillary test, healthcare providers should follow-up on any elevated levels >5mcg/dl to ensure confirmatory venous testing is conducted.
