She was okay with even bi-weekly provision last week and understands that real-time for these data is not the same as real-time for communicable disease (syndromic) or MCIR.

My understanding is that they want to geocode at the ward level but the existing DUA should spell out what they are doing.

Please contact the physician or her research coordinator to make sure the correct details are spelled out in the DUA.

We have confirmed that they have a signed data sharing agreement in place for data through Sept. It looks like what they want is an update to the present AND for Bob to report any new cases "real time" as they come in with the same variables as previously. They could get this weekly, after the week-end warehouse dump, if they want to have childID#. Should we communicate with Dr. Hanna-Attisha and make sure this is what she is requesting? (I am little confused by the various emails about zipcodes). And Bob: would this be much of a problem for you to prepare weekly for them?

We will also need to determine how to provide information weekly securely. Maybe Bob already did that using an FTP site or something...

I think we should talk to Dr. Hanna-Attisha to make sure this is what she wants etc.. and then work on the amendment to the data sharing agreement.

Regarding data request from Dr. Hanna-Attisha. Her team needs data starting from the end date of the last data request which should be spelled out in the IRB and data use agreement.

Jenny LaChance is their research coordinator.

Corinne, I just realized for the data request, we would need data starting from where our last request ended - which I think was Sept 15, 2015.

Thanks! Mona

Hi Mona,

I talked with Corinne just now.....do you still have time at 1? Janese can set up a conference call---
