Corinne, I just realized for the data request, we would need data starting from where our last request ended - which I think was Sept 15, 2015.

Thanks! Mona

Hi Mona,

I talked with Corinne just now.....do you still have time at 1? Janese can set up a conference call---

sounds good. as of now, i can talk tomorrow before 8:30am, 1-2pm, or after 3:30pm.

FYI I am working with Hurley Children's, MSU, and maybe the GCHD to create a sort of Pediatric Public Health Collaborative that would house the ongoing assessment/long term followup/research/continued monitoring that we are doing as well as some of the secondary prevention interventions which include all of peds public health. The team will include part of me (30%), research support, epidemiologist, GIS, toxic stress researchers, etc. The reason I wanted to include the health dept was primarily for access to data - like the BLLs - but also to prevent redundancy of interventions. MSU and the health dept already have an academic health dept relationship, but I don't think it includes data sharing.

I like that idea- and I don't foresee an issue with such an agreement. I hope you understand that this is just one form of a surveillance report, and there can be others- but we really wanted to get the testing data started.

Shall we discuss with State Epidemiologist-/could set up call even tomorrow- will share your request with Nick right now

Do you think it would be possible to create a data sharing agreement so that we could do the real-time geocoding of kids with EBLLs? So whenever a EBLL comes in for Genesee county, my team can map it, trend it, etc? You guys may already be doing this, but we easily have the GIS support. This real time mapping will further help us identify hot spots for resource delivery and remediation.
