Subject: driver's license data

Glenn,

You may be aware that MDHHS is working with local partners on childhood elevated blood lead levels in Flint. Thanks to supplemental funding from the legislature, the MDHHS Childhood Lead Poisoning Prevention Program has been able to provide additional funding to the Genesee County Health Department to expand case management services for children with elevated blood lead levels in Flint.

A number of families where the child has/had an elevated blood lead level have been lost to follow-up and, in spite of the best efforts of local staff, the families have not been found.

Katie Macomber mentioned that you had access to drivers' license files and I was wondering if these files might be a source to enhance lost-to-follow-up activities. In addition, I thought LexisNexis would also be a possibility.

Any advice you can provide is appreciated.

Corinne
