Subject: RE: Heads Up, Flint Water Related Perhaps

I'm just about to fire off a note to the MD and HO at Genesee County HD about the status of the case follow-ups in their jurisdiction. We're working to schedule a call next week with them as well, but I hope to get the ball rolling with an offer of staff support for this investigation. These kind of investigations can be challenging but if we move forward, we've got some pretty good experience at them.

We've had contact with all of them and have not them know that this is going on.

Wow, this is very concerning. At this point, would you typically share info about # of Legionnaires cases with DCH?

Hi Sue,

Corinne and I thought it would be a good idea to make you aware of some infectious disease occurrence that MAY be related to water quality issues that are very hot topic in Flint right now.

<http://www.freep.com/story/news/local/michigan/2015/01/22/water-woes-latest-hit-flint/22193291/>

In a nutshell, we have seen a pretty dramatic increase in the number of cases of Legionellosis in Genesee County (with particular focus in Flint). Recalling that legionella bacteria causes disease generally when it is present in water that becomes aerosolized and ultimately inhaled, the fact that this increase in diagnosed cases seems to overlay with the change in Flint water municipal supply (from Detroit to the Flint River) is concerning. Unfortunately, we really don't have enough information from follow up on these cases at the LHD level to support an association or rule it out. I am working with the LHD to try to support their efforts in gathering and entering the information and well see how that goes. We do have a CSTE Fellow on staff, Lilly Tyndall, who will be available should the LHD issue be resources, though it may be as much a political thing at this point.
