Thanks for forwarding this, Corinne. Karen and I will await details from Bob/Martha, e.g. original level, any new levels, name, address, etc., and follow up with GCHD. Karen and Bob will be at GCHD in person on Tuesday, so can talk about this case in person.

I'm sure Bob will be able to answer the question about whether he receives cord blood test results.

This is not the first case we've had where a pregnant woman had an EBL, as well as her baby. Not terribly common, but it has happened. I am still hopeful that as we build a better system to address lead exposures, we can start to shift our focus to prevention and pregnant women. There have been some really nice examples of success with that approach in other states.

Right, of interest is that this is cord blood from a newly born baby....!!! There should be NO lead...

Jori and Eden,

Please see below. Please note that this is a result below 5. We are happy in this extended circumstance to follow this family. I am off next week and will need you Eden, to advocate with state for the follow up by case managers as it does not fit the specified criteria.

Merry Christmas!

Toni

Looking forward to hearing from a case manager.

We started our cord blood lead research project about three weeks ago. We've tested about 150 cord bloods. Every mom (except 2) has consented to the research. We are only getting back results now and we have not analyzed anything yet. It would be interesting to confirm if these cord blood results get to the state program.

Hurley delivers about 3000 babies/yr. Most of city of flint babies.

Good to know- we shall be sure one of the case managers contacts you directly for information-- how many babies are born at Hurley each mint? I.e., how many cord bloods are being tested?
