

Linda and Lisa---Just following up. Do the filters that I send you in lat evenings email for Dr. C reduce copper to below 100 PPB, and if so, are they NSF certified to m=remove lead also? I promised Dr. C I would follow up with her about this---even though I am concerned about need to directly link with the providers.

The copper issue is really going to be one for a few individuals if any, and copper removal would babe an issue for them pre and post river switch- per my other email I am trying to caution making recommendations we are not qualified to make...

Will these filters (listed below) also remove lead? If so, can just recommend those filters to the patients (I am working with Pete to estimate how many there may be) and that may be our solution. They would need to meet the recommendations of the Wilson's Disease Society that Eden sent.

Pete said he can send out email on Monday.

Do you have recommendations as to how to proceed Mark?

I asked Jim Henry of my environmental health staff to research the copper filter reduction issue and talk to the people at NSF. His findings are below. I had a friend who used to work at NSF but is long retired. I remembered from a conversation that often manufactures get products certified for particular chemicals and there is a cost increase with each particular additional certification. So they limit the testing based upon what makes economic sense for them. In this example, it does not mean that the filters we are distributing do not reduce copper but more likely that they did not pay for that certification test to be run. If that test was not run they cannot claim to be "certified by NSF". Oddly Brita does advertise that their filter reduces copper but it is not listed on the sheet in the box as certified by NSF for that.

NSF did supply the filters list certified for copper reduction, which is included below for your information.

Mark,

I spoke with NSF. They reviewed their records and the filters being distributed below are not certified for copper reduction. NSF informed me that they should reduce copper (because they reduce lead), but they will not make that statement.

The email below has a link to NSF certified filters for copper removal, which may be beneficial for those with copper sensitivities. I saw that Dr. Carravallah spoke with Mark Edwards regarding copper levels. He may be able to provide more (unofficial) information regarding the filters' capability to remove copper.

- Brita Faucet Filtration System, model number SAFF-100
- PUR Faucet Mount, model number FM-3700B
- Zero Technologies Water Treatment Pour Through Pitcher, model number ZD-018
