Eden,

I support frequent updates. Mona and her team can continue to do the GIS work and track progress (or lack thereof) in the blood leads. I think that overall, the latest data implies we are on the right track.

We can use the updates to reinforce the importance of using the filters and bottled water that are being provided...

Best Regards,

Marc

Hi Dr. Reynolds,

I just got done with an email with Mona---

This is a general public report that is high level--not a technical report, and was not meant to represent a technical report. This is general information--of course our surveillance program is tracking by zip, Medicaid, locality, etc.

We can discuss further what type of reporting may be useful to a technical audience---as long as not identifiable (some zips have to be suppressed) I don't see why this can't be done (probably not every two weeks like this public one would be)

Warm Regards,

Eden

This is a good start but maybe lacking context . Would GIS software identify clusters ? I am disappointed to see, at this moment , that Dr. Edward's study and Dr. Mona's study which have more granular reporting are given no credence. Is there a reason ?
