

It is not common for us to receive the MDEQ daily report with this many lead results or the number of elevated in one location. We commonly receive between 1-15 general water results, which most are usually bacteria, partial chemistry and arsenic, mixed in with a few lead and copper.

I'll report back what I find at Whaley.

Subject: Whaley Childrens Center 1201 N. Grand Traverse

Jim,

I just got a call from Eden Wells and DEQ just told her Whaley CC was given sample results of 213ppm and 2516ppm from two fixtures. As this is a center for foster kids it would be a good idea if we verify they are not using those fixtures. Find out if they have filters or are using bottled water. Are the kids there seen by a physician and tested for lead? Have they notified their physician(s) of the problem?
Thanks
