How's this?

- CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with EBLL of 52 µg/dl. GCHD Nurse reports that the child's lead level has decreased to 20 µg/dl.

Typo under Epidemiology surveillance

- . Master list will be **compiled** on Monday and HHS staff and GCHD who will track their CM activities re these children and report back to HHS on Friday.

Can we remove this section, I think it's still confusing to say level confirmed at 36. And we have a statement that nurse says it's 20....

- CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with high EBLL, per our Nursing protocol. Second lab report received, confirming that his BLL had dropped from 52 to 36 µg/dl. GCHD Nurse reports that the child's lead level has decreased to 20 µg/dl, but the lab report has not yet been received at HHS.

Ok, added that plus an item from Wes. Also condensed EBL child info into one bullet point under CM. Please distribute if ready to go.

This would be a new item. Add under healthcare provider section. ...Sue/Eden edit if necessary.

Moran, Wells and Miller met with Medicaid health plan staff on December 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs. Medicaid also suggested inviting Dr. Wells to speak about Flint at a future meeting with Medicaid health plan medical directors. Medicaid identified three individuals to partner with epidemiology staff to develop a roster of Flint children enrolled in Medicaid to provide more precise estimates on the percentage of Flint children enrolled in Medicaid who receive EBL testing.
