Subject: Provider Education Workgroup - draft of Community Rx for Children with Elevated Blood Lead Levels 5 to 14 ug/dL

Hello all,

Per our discussion at the 4/14/14 meeting of the Provider Education Workgroup, please review the attached draft. This is intended to be a customizable one-pager that primary care providers can give parent/guardians. Text in red indicates portions to be customized for each community, by each contracted local health department.

I made several changes to the previous draft in response to your suggestions (according to my notes and my somewhat leaky memory). Changes include:

- Making the first paragraph simpler and more direct
- Dividing the “follow-up instructions” into a set of three clear steps for the doctor and the remaining items for the family
- Removing the item for getting an insurance card (too expensive to be realistic)
- Adding potential links to social media

There was also a suggestion of providing an example of a completed form, especially for the “Local Resources” section. I’ll work with one of our local partners on that.

All of our local partners for Lead Prevention are awaiting this document with bated breath, so I’d appreciate any feedback you might have by Monday, May 19.

Please feel free to call if you have questions.

Thanks,

Bob Scott
