I'm happy to move it to the second column and change the language however Toni would prefer. Just let me know what that language would be and I will update.

You can of course do whatever you want, but GCHD is an independent and constant place to get blood tested – it is not one of these community/health plan events that are popping up to do single day mass screenings.

If you were to prioritize testing methodologies, it would be primary care doctors, GCHD and then least-preferred would be the anti-medical home community/health plan events. So GCHD should actually be the second column.

And under the GCHD, it would include the process - walk-in, appt, lab test, etc. Toni can clarify this.

But of course, it's up to you.

Instead of adding another column that would say the exact same thing in every row, we added a line to the community column as the GCHD is located in the community. The language says: Testing available at GCHD.

If that language should be more expansive or detailed, I'm open to suggestions.

I think I have emailed this about ten times already, there needs to be a third column under testing methodology titled GCHD -- that is an independent site where kids can get blood lead tested- separate from the primary care providers and separate from community/health plan events.

As we received no edits to this last night, circulating tonight. Looks like this is the final version?

Also, any insight to the difference between Priority levels 2 and 3? Any help would be appreciated!

Attached is a cleaned up version for Priority 2.

Can someone help me understand the difference between the priority levels? Now that P2 and P3 have the same actions associated with them, hoping to be able to explain why we've set these different audiences under different priority levels.
