

unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it." This sentence reads as though every time you wash your hands with unfiltered water, you need to run the tap for five minutes. I know most families will have concern with that.

Thanks,

Tamara Brickey, MS, CHES

Subject: RE: Final Press Release/ with attachments

Documents look great, a couple edits----

Press Release:

“As we continue to find ways to inform and guide the Flint community towards reducing lead

exposures, we are appreciate appreciative of the collaboration with Genesee County Health Department,” said Dr. Eden Wells, Chief Medical Executive with MDHHS. “Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint.”

Parent Letter: The word doctor is used throughout the document- we should stay consistent.

Where should I go to get a blood lead test for my child?

The best place to get your child’s blood lead test is your doctor’s office. Your doctor ~~pediatrician~~ will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.
