Subject: CM for children with lead levels < 5

Good afternoon, Jori.

Per our discussion last week, with this email I am verifying our conversation that there may occasionally be circumstances where GCHD deems it appropriate and necessary to offer Case Management services to a child in Flint/Genesee County, who has been exposed to Flint water, that has a blood lead test showing a lead level <5. If this occurs, we appreciate if you could keep us informed that you have made such determination, and for whom (conversation during the weekly call will suffice). That will help us as we maintain our records here. Please let me know if you have questions.
