Mark -- Here's the L Letter we sent last week to Medicaid providers.

The approach we discussed would be beneficial to those you cover in Flint. We have stepped up our testing, outreach, and education efforts with the local public health department in a very significant way since it became apparent that there was an increase in children testing above the 5 micrograms level. As we discussed we have also begun doing home blood lead investigations with the supplemental funding approved late last year. I think a critical component going forward will be care coordination with children (and adults) who test above the threshold, including nutrition counseling. Molina had indicated they are working with other providers so if you haven't heard from them, you might want to reach out.

Thanks for your efforts.

Nick
